Our Column

It won't be long before people will be studying the Spring seed catalogues.

Men don't change much. They are either old and bent or young and broke.

Judging from the way automobile licenses are being taken out, there would not appear to be such hard times in Ontario as some imagine.

"A stout heart will carry you through the present busi ess depression," says a writer. A little money would be no handicap either.

The city of Kingston reports that saving accounts are increasing in the banks of that city at any "alarming" rate. The saving habit is a good one, and is seldom alarming, but when so many people are reported out of work the spending habit should be encouraged.

The constant drip of water,
Wears away the hardest stone.
The constant gnaw of Towser,
Masticates the toughest bone.
The constant wooing lover
Carries off the blushing maid,
And the constant advertiser
Is the one that gets the trade.

John Sypes of Ladysmith, north of Iroquois, was fined $18 and costs for trapping muskrats illegally. Provincial Constable Frank Rose made the arrest on the Sypes farm, finding eighteen skins in the shed. Magistrate McCormick fined Sypes $1. for each skin and costs.

The Pembroke Observer pays the following deserved compliment to Rt. Hon. Robert Meighen: "Meighen may, or may not, again enter public life. He owes nothing to the Canadian people by way of service, but the call for his services was never more insistent and strange to say, it comes from the Canadian people quite irrespective of party."

A boy was asked to write a 50 word essay on a politician. This is what he wrote: "A politician is a man or a woman who makes speeches in a loud voice, which somebody else writes. Politicians know more people at election time than any other time. If they are good politicians they never have any money, and when they die they are given a tombstone."

The changing political complexion of the Almonte Gazette is interesting, and the wonder is that the "Gazette" that was so Liberal under McEwen and Monroe, and so Progressive under Muir should now become the very opposite, and not only uphold, but preach all that is good and fine in the Conservative Party. Of course it is much harder to be "Independent", than it is to be partizan, and be understood. Probably that is what is the matter with the Gazette.

Watch This Prophecy

Weather Prophet J B. Bowes, of Chatsworth has staked his reputation on a prediction of January 1931 weather. He is fairly definite about it (a dangerous thing for a prophet) so that those who have faith in Bowes will have a chance to learn to what extent their faith is justified. Here is what Mr. Bowes says: "January 1931—One of the most pronounced storms of wind, rain, snow and frost that it is possible to have in 30 years will commence in the first week and last to about the 15th. The persistence of the winds all over the world will cause tremendous seas that will cause great loss of life and destruction of shipping. This cold wave will extend very far to the equator. The southern hemisphere will also have very heavy rains and frosts. I cannot speak with any confidence about the third week of January. Last eek quite cold wintry weather, February 1931—Very mild the coldest about the 23rd."

Notice to Parents and Pupils

The Staff and Board of the High School request the co-operation of parents and pupils of the Village in preventing the return of pupils to the school building before 8.45 a. m. and 1.15 p. m.

By Order of H. S. Board.

Stanley Waddell, Teacher.

The United Church

(Contributed)

A large number of members and adherents entered into the communion service on Sunday morning, when four members were received dy letters from other churches. Taking two texts, Matt. 16:15, and Ps. 34:3, Rev. J.A. Waddell spoke on; "What does Jesus mean to me?", showing what an abiding friend He is, and how He gives the consciousness of His in-dwelling spirit. He gave testomonies of great men as to what Christ had been to them, and said we may live in daily comradeship with Jesus who will help us to produce the noblest and best type of life. He is a great sympathetic brother, who has helped us carry all our loads. He will be our leader, guide, and Saviour.

Mr. Waddell paid a fitting tribute to Rev. Father Minigan, theologin, temperance worker, and friend of the poor, who passed away in Toronto during the past week.

From 1 Cor. 16: verses 8&9, the pastor spoke at the evening service, saying that an open door is before us ln 1931 The way may be beset with difficulties How shall we meet them? Let us say we are able to overcome them all through God's help. Some of the adversaries we meet with are an absession for material possessions, the spirit of strife, indifference and discouragement, but Christ will not fail us. We were urged to go forward to meet, greet and beat the difficulties with His help.

LOCAL AND GENERAL

The weather on Sunday last was mild, but the roads very slippery, and there was not as much car traffic through here as usual.

Services in St. Mathias' Church on Sunday next will be, Choral Evening with Corals, at 7.30 p. m. Sunday School at 3. p. m.

Miss Lera Summers has returned to her school at Rosseau Rd. after spending the two weeks holidays with her parents, Mr. and Mrs. G. H. Summers.

The Ontario Legislature is announced to open on Feb. 12 and the Dominion Parliament will probably meet about the 19th Feb. Both in Toronto and Ottawa lively sessions are looked forward to.

Three men and a woman, when driving on the Ottawa river near Rockland, last week, were drowned when the car was driven into a hole in the ice A snow storm at the time prevented the driver seeing his danger in time.

Don't forget the exhibition hockey game on the local rink to-night, between Hy. Bessin's Granite's, of Ottawa, and the Winchester Juniors.

The Granites are an all star Jewish Team and know their hockey. The local team has some new faces on its line-up, and seem to be working pretty in recent practices. The game will no doubt be one of the best of the season, so don't miss it. To-night at 8.15 sharp.

Over $10,000,000 paid by the people of Ontario in gasoline tax to the Ontario Government. Over $50,000,000 paid by the people of Ontario to the Ontario Government for whiskey No wonder the ordinary man begins to feel the pinch of poverty and burden of taxation. We have been keeping up the pace and now we have to pay for it. What a pity that so much money is spent to not only damage body and intellect, but make innocent ones suffer unnecessarily.

Wins Dinner Set.

Mrs. Jas. E. Jackson was the winner of the 50 piece Dinner Set which was given to the holder of the lucky number in the tea contest recently conducted at Keyes' Store. Her number was 134.

Births

At Shawville, on Wed., Jan., 7th, 1931 to Mr. and Mrs. Hubert Hamilton, a son, Howard Ernest.

At Grace Hospital, Ottawa, on Tuesday, January 6th, 1931, to Mr. and Mrs J. R. Barkley, of Kempville, a daughter

Suffered Stroke

Mr. Nehemiah Carkner, Center St., was seized with a stroke this morning as he was coming down stairs. His wife, hearing him stumble in the stairs, ran to his rescue, but was unable to save him and both fell down the steps. Dr. Mallock was quickly summoned and rendered all possible aid. Mr. Carkner is unconscious, and being a man in his 75th year, is not likely to make a quick recovery.

Renews Radio Talks

W. F. Stephen, Secretary of the National Dairy Council of Canada, will renew his Radio Talks over C. N. R. O. on some phase of the food value of Milk and its Products. The first talk will be on Thursday, January 8th, at 5 p. m., subject, "Milk, the Best Food for Babies." These talks will be "graphed" and a copy will be sent on application. We invite those interest to "listen in" at the hour and on the day mentioned.

Late Mrs. Moffatt

There passed away, after a lingering illness, on Wednesday, Dec. 31st, 1930, Catherine McMartin, widow of the late Thomas Moffatt, in her 86th year. The late Mrs. Moffatt was born in the township of Williamsburg, July 15, 1845, her parents, Peter McMartin and Janet Stewart, being highly respected citizens of that township. In June, 1874, she was wedded to Thomas Moffatt, a prosperous farmer of Winchester township, and with her husband took up her residence in the Melvin Settlement, where she continued to reside until about eight years ago, when, with her son, she moved to Winchester. She is survived by her son, Walter Moffatt, and Mrs. J. A, Edgerton, both of Winchester. In religion, Mrs. Moffatt was a faithful and devoted member of the Presbyterian Church, and in her life left an example of christian self-sacrifice, devotion and kind-hearted consideration for the welfare of others. During her declining years she was tenderly looked after by her devoted children, and her passing was like onto one who having served faithfully to the end was being transferred to that heavenly peace and rest that await the faithful. A very impressive funeral service was conducted at the home on Friday afternoon last by her pastor, Rev. Mr. Turner, of St. Paul's Church, and interment was made at Maple Ridge Cemetery.

New Year's Entertainment

The Annual Entertainment of St. Paul's Presbyterian Sunday School was held in Lannin's Hall on New Year's night, when a large and appreciative audience greeted every number. After the opening remarks by the Chairman, Rev. Mr. Turner, the curtain rose on a beautiful tableau, "The Spirit of the New Year," followed by drills, dialogues, duetts, pantomime and recitations by members of the school, each number deserving much praise.

The one-act Play, "Jerry" was splendidly performed, and although the hour was late, the attention of the audience was held throughout. The different parts were taken by Misses Ruby Quart and Phyllis Henderson, and Messrs. Robt. Robinson and Harry Rodney.

Others who kindly assisted in the program were Mrs. Turner, Mrs. B. F. Smith, Mrs. Olive MacRae, Misses Jean Anderson and Jennie Empey, Mr. McCormick and Mr. Angus, each number thoroughly enjoyed by the audience. Miss Clara Irving and Miss Marion Turner, S. S. Pianist, were the accompanists.

Much credit is due Mrs. Turner, Mrs. A. G. Suffel and Miss Clara Anderson, who so carefully and patiently trained the scholars taking part, and the Superintendent of the Sunday School takes this opportunity of thanking all who in any way contributed to the programme and making the Entertainment such a success. Proceeds amounted to $104.00

LOCAL AND GENERAL

A distinct earthquake shock was felt at Ottawa on Monday night.

The Women's Guild of St. Matthias' Church, will hold their meeting at the home Mrs. D. H. Weir on Thursday, Jan. 15th at 2 30 p. m.

Watch for posters advertising George Hummell's big auction sale of stove wood to be held on the Madden Farm near the Hess Cheese Factory on Tuesday, Jan 27

The regular monthly meeting of the Women's Association of the United Church was held in the Sunday School Rooms on January 5th, with Mrs. J. H. Faith, the president, in the chair. In spite of inclement weather there was a large attendance.

Hy. Bessin's Granites, of Ottawa, will arrive tonlght by special bus and will take on the Winchester Juniors in an exhibition hockey game. The Hebrews will be without the services of their two star players Dibkin and Epstien, but have a strong substitute line and feel confident of winning. Don't forget to come out and cheer our home boys on to victory.

Victor Duchesneau Dead

Mr. Victor Duchesneau, who a couple of weeks ago was taken to the Civic Hospital at Ottawa, died last evening. He is survived by his widow at Winchester. The remains will be sent west for interment.

Acknowledged

Some societies do appreciate the service rendered them through the Press, and it is always a pleasure to the editor to know that his services are appreciated. The note of appreciation from the ladies of St. Matthias' Guild is acknowledged in the same kindly spirit in which it was sent.

Revival Meetings

Rev. E. E. Curtis, of Watertown, N. Y., will conduct revival meetings in the Wesleyan Methodist Church, Winchester, Ont. Beginning January 11th and continuing over Jan. 25, 1931. Hours of service as follows: Each week evening at 7.30 p. m. except Saturday evening. Sabbath services, S. S. at 9.30 a. m., preaching at 10 30 a. m. and 7.30 p. m. Special singing at each service. A cordial invitation is extended to all.

Pastor, D. W. Summers.

Curling Trophy

The one large and four small cups donated to the Winchester Curling Club by the Christie Brothers of Calgary, Alta., are now on exhibition in B. F. Smith's Drug Store. They make a fine showing and should create a keen competition among the curlers in the United Counties. The local club selected to defend this trophy for Winchester are Messrs B. L. Carr, D H. Weir. L Kinkaid and H. L. Lee. They all have a good reputation as curlers, and should make gallant defenders. But curlers are ever sports, and as gallant losers as winners, and to create a real interest in curling the cups should take several visits to outside places.

Will Keep Morrisburg Carleton Road Open

The Suburban Roads Commission at Ottawa has received information from the Department of Highways, Toronto, to the effect that the department will keep open the roadway from the limit of Carleton county to Morrisburg. The distance from Ottawa to the boundary of the county is 22 miles and the commission has been keeping this portion open but not the section between the county limits and Morrisburg. This will now be looked after by the Department of Highways, and the news will be welcome to residents of Morrisburg as well as intervening centers who have experienced difficulty in reaching the county end of the highway.

Ice Races

Ice Races will be held on the Nation River, one mile south of Inkerman Village, on Saturday, January 10th, 1931, starting at 1pm. Come and enjoy a good horse race.

Jas. Barclay, Promoter.

Obituary

At an early hour on Monday morning, December 29th last, there passed away at the Icolation Hospital, Kingston, a well known and highly-regarded member of Shanly in the person Mrs. Percy Ault. The late Mrs. Ault was born at Tov's Hill on Feb, 21, 1903, the daughter of the late Mr. and Mrs. Hudson McIntosh, and resided there until her marriage to Mr. Ault in the month of April, 1927, when the young couple made their home in Shanly, with Mr. and Mrs. Simon Ault.

The deceased was known and loved by a large circle of friends and acquaintances in her adopted home; and the funeral, held from her late residence on Wednesday, at 1 30 P. M., and thence to the United Church for the service, was largely attended by relatives and friends. The late Mrs. Ault had deen seriously ill for some time past and her death was not entirely unexpected. She leaves to mourn her loss, her husband and young son, Glen McIntosh; one brother, Frank McIntosh, now of the State of Vermont; three sistors, Mrs. (Rev.) M I Robinson, of Athens, Mrs. A. Bell, of Brinston, and Miss Anna McIntosh, also of Brinston. One sister, Minnie, pre-deceased her some time ago, as did her parents.

The funeral service was conducted by her minister, the Rev. John L. Hodgson, with whom was associated the Rev. John Hurst, of Manotick, (who was the officiating clergyman at the late lady's wedding in 1927) who preached the sermon. The senior choir of the United Church of Shanly sang the anthem and the commital took place in the neighbouring cemetery, in the family plot. Rev. A. F. Fokes, Brinston, also assisted at the church service.

The untimely passing of Mabel L. Ault leaves a gap in the ranks of the younger married people of this community, to whom she had endeared herself during the past three years of residence here, and the sympathy of the entire community goes out to the widowed husband and young son.

During the church service, Mesdames Collison and Strader, both of Brinston, sang the beautiful number, "Some Sweet Day, Bye, and Bye," by special request. Among those in attendance at the funeral besides the numerous connexion, were the Reverends. M. I. Ropinson, of Athens, and H. M. Servage, of Heckston.

SOCIAL AND PERSONAL

Miss Alice Dunn of Ottawa was the week-end guest of her cousin, Miss Helen Ault.

Mrs. McLaughlin of Ottawa is spending sometime at the home of her brother, Mr. Geo. Earle.

Mrs. W. J. Walker of Mountain was a week end guest at the home of Mr. J. Cumming at Ormond.

Dr. G. M. Empey, of Hammond, N. Y. left on Monday, having spent the holiday season at his home here.

Mr. and Mrs. T. O. Dales, of Prescott, spent New Years day with the former's sister, Mrs. B. McConkey.

Mr. and Mrs. T. A. Duncan and wee Betty spent Christmas with Mr. and Mrs. Thos. Belway, Calgary.

Mr. H. Sutton, Editor and Manager of the Smith's Falls Record News was a caller at the Press Office last Friday.

Mrs. M Beaton. of Westmount, Que., returned home Sunday, having spent the holiday season with Mr. and Mrs. B. McConkey.

Mr. and Mrs. Hubert Rodney and son Jack, of Smith Falls, were the week end guests of the formers mother, Mrs. Burwash, of Winchester.

Hyman Bessin attended the private banquet and dance given by the Mystic Order of Bachelors at the Standish Hall Hotel on Saturday night.

Mr. J. H. Ross, was called to Toronto on Friday last by the death of his sister, Mrs. Wilson, who had, on several occasions been a visitor to Winchester.

Mr. Robert Hitsman, who is playing hockey with the Spencerville hockey team this winter, spent New Years with his parents, Mr. and Mrs. S. Hitsman.

James W, McLeod, Cornwall, and once clerk of Cornwall Township, once M. P. P. for Stormont, died at Cornwall on Wednesday evening. He was 60 years of age.

Callers at the home of Mr. and Mrs. Howard Bell on Sunday were: Mrs. Wm. Swerdfeger, of Ogdensburg, N. Y., Mr. and Mrs. Lorne Bell and Mr. and Mrs. Thos. Bell, of Inkerman.

Mrs. J. H. Ross, who for the past several weeks has been in Kingston visiting her daughter, Mrs. D. Roughton, and receiving medical treatment, returned home on Tuesday much improved in health.

Dr. and Mrs. D. L. Bailey have returned to Toronto after spending the holiday with their parents. Dr. Bailey returned earlier to attend the meetings of the American Association for the Advancement of Science at Cleveland, Ohio.

Guests at the home of Mr. and Mrs. Howard L. Bell, New Years for tea, were: Rev. and Mrs. J. A. Waddell, Mr. and Mrs. Adrien Bell and Orvil, Mr. and Mrs Clarence E. Holmes and baby, Mr and Mrs. Lorne H. Bell and Gordon; Gordon being christened on this occasion.

Mr. and Mrs Edward Beach had the pleasure of a full family gathering in their home Christmas Day, the first Chrirtmas gathering in sixteen years of all the living members of the family. There were four children, one daughter-in-law, two sons-in-law, and twelve grand children.

CARD OF THANKS

To the Electors of Winchester Township:

Ladies and Gentlemen:—I desire to very earnestly express my appreciation of the confidence you have placed in me by returning me to the position of deputy-reeve at the council board of your township. It will be my earnest endeavor to look after your business to the very best of my ability, and to the utmost advantage of the ratepayers as a whole.

Sincerely yours,
W. J. McConnell.

In Memoriam

Rodney—In loving memory of my dear brother, Robert, who passed away January 8, 1930.

Days of sadness still come o'er us,
Tears in silence often flow,
For memory keeps you ever near us,
Though you died one year ago.

Friends may think that we forgot you,
When at times they see us smile,
But they little know the sorrow,
That one smile hides all the while.

Mr. W. J. Rodney and family.

Card of Thanks

Ladies & Gentleman:

I wish to use the public press as a medium through which I might express my thanks to the electors for re-electing me for a second term to the office of Reeve of the Township of Winchester for 1931 My time and service is now at the disposal of each and every elector in all matters of business pertaining to the township's welfare.

Wishing you all a Happy New Year, I remain

Sincerely yours
H. HOWARD NESBITT,
Winchester Springs.

Clouds Contains Little or No Water

Also Contrary to Popular Version Science Claims Clouds Do Not Burst

Clouds do not burst.

The name was given years ago to torrential downpours of rain, when their causes were not fully understood.

In many cases, persons who have witnesses these sudden, violent rains, report that water seems to fall in streams instead of drops.

Dr. Charles F. Talman, of tthe U.S. Weather Bureau, says in Popular Mechanics (Chicago) that most cloudbursts are due to violent uprushes of air at the beginning of a thunderstorm, carrying the drops up instead of permitting them to fall. When they do fall, a great quantity of water comes down at once.

When such a shower takes place in the mountains, just above a narrow gorge, the gorge may fill with a rushing torrent in a few minutes. We read:

'Several destructive cloudbursts are reported every year in the United States.

'Last fall, while the most severe drought in American history was at its height, two of these events made first-page news in the daily press.

"One took place in the twin towns of Nogales, on both sides of the boundary between Arizona and Mexico, where semi-desert conditions usually prevail. A sudden downpour during the night converted the streets into raging torrents and a score of people were drowned.

"In the other case, a temporary river, several feet deep, roared down the single long street of Bingham Canyon, Utah, below the world-famous open-cut mine of the Utah Copper Company.

'A cloudburst is an excessively heavy local downpour of rain, of comparatively brief duration. In its intensity and its concentration in space and time ,it bears much the same relation to a wide-spread heavy rainstorm as does a tornado to an ordinary cyclonic storm. The name of the phenomenon is popular rather than scientific, and no hard-and-fast definition of this name has ever been adopted.

"Of course, we know today that a cloud is merely a collection of very fine droplets, and not a coherent mass, such as might be subject to any process of rupture. Moreover, modern research has revealed the fact that the clouds contain surprizingly little water.

"The densest clouds are probably not more than one part water to 30,000 parts air, and it is computed that, if a huge thunder-cloud several miles in depth were, through a miracle, precipitated en masse to the ground at the maximum speed of fall-rain, the resulting rainfall would be decidedly less intense than often occurs in so-called cloudbursts.

"One of the fastest showers ever measured with an automatic-rain-gage was that of May 1, 1908, at Porto Bello, on the Isthmus of Panama, which 2.47 inches fell in three minutes. This rate of fall was surpassed on April 5, 1926, at Opid's Camp, in the San Gabriel mountains of California, when 1.02 inches of rain—equivalent to 115 tons of water per acre—fell in one minute. This remarkable downpour was caught by two automatically recording gages, standing side by side, and as their records agreed, the figure just quoted is entirely trustworthy."

While this figure stands, for the time being, as a world record, it certainly does not represent, in Dr. Talman's opinion, the greatest possible intensity of a cloudburst. Evidence of much more excessive falls is supplied by huge holes, known as "cloudburst cavities," found after cloudbursts, and evidently produced by the impact of the falling water, and not by rapid run-off. Observers have described these cavities in some cases as resembling the work of the hydaulic "giant" used by gold miners. To quote further:

"Eye-witnesses of cloudbursts have frequently described the water as coming down in masses or streams, rather than in drops.

"The earlier scientific attempts to account for these tremendous downpours assumed that the water was due to rapid condensation in the vortex of a tornado or waterspout, and hence the name 'waterspout' was formerly often applied to a cloudburst, even when it occurred far from any body of water.

"The rainfall attending a tornado is doubtless sometimes of cloudburst intensity, but the majority of cloudbursts are now believed to be the product of thunder-storms. Violent uprushing currents of air always occur at the front of an advancing thunderstorm. Moisture in the air drawn into the storm by these currents condenses as it rises, on account of the cooling of the air by expansion, but the upward blast is so strong that for a time the water is prevented from falling as rain.

"If the rising currents are weakened at some point, a large accumulation of water is permitted to fall at one time. This is especially likely to occur when a traveling thunderstorm, which is fed by rising streams of air from overheated ground, passes over the cooler surface of a mountain, so that its supply of warm air is temporarily cut off. This would explain, the special frequency of cloudbursts in mountainous regions.

"The rainfall and run-off of cloudbursts produce their most striking effects in lands where the normal rainfall is so light that there is little or no vegetation to protect the ground from washing. The weirdly sculptured landscapes of the Bad Lands are the results of occasional torrential showers in a region where dry weather is generally prevailing.

"A cloudburst is rarely a welcome event, but one that happened near Lake City, Colorado, in the summer of 1929 scoured the hillsides and laid bare valuable deposits of ore, starting a small gold rush to the locality. A similar downpour many years ago in the same region is said to have brought to view several million dollars' worth of gold and silver."

Telling the Time By Odd Methods

In these days when clocks are run by electricity, when every hour of the day and night is flashed all over the world from big radios, curious devices are still found by which one measures, discovers, or reminds himself of the time. In Canada certain cooks and housewives, when clocks run down, can boil an egg three minutes while humming six verses of "God Save the King." One verse, sung in a slightly slower tempo than usual, takes thirty seconds.

In certain districts of the Rhine provinces the recital of various prayers, each taking a definite period of time, aids the cook in the boiling of eggs or in other processes at the kitchen stove. The more modern method there, however, next to the clock, is the use of the hour-glass, a primitive yet efficient instrument.

In the mountain districts of the North American continent or in Asia hillmen are found to whom watches and clocks are non-essentials. If one asks such a mountaineer how long it will take to walk to a certain point, he is likely to say, "About three pipefuls," meaning that one can smoke three pipes of tobacco on the way. Or he might reply, "It's over thar a piece." A "piece," to the more ignorant, may mean anything from a quarter of a mile to a mile and a half.

Shepherds and other dwellers in the hills all over the world develop an accurate time sense by noting when shadows shorten or lengthen.

In parts of China the peasants have attained skill in estimating the time to within an hour or so by examining the eyes of a basking cat, the pupils of which shrink at noon and automatically widen as the light grows less intense.

There is an old custom of the sea by which sailors take their first drink of the day when the sun, around noon, is over the yardarm.

Evolution of Stock Meets New Demands

At the fat stock shows, including the Smithfield Show in London, England, and tthe Birmingham fat stock show and others, great numbers of beautiful animals of tthe highest possible quality from the butchers' point of view are to be seen, and it is a remarkable fact how the breeder is able to meet the changing conditions of the time by the evolution of stock to conform with the different requirements.

The most remarkable development of this nature during recent years has been the bringing to maturity of cattle of a much smaller size and at a much younger age than was previously possible to provide the small joints required for the small families and small ovens normal at the present day.

Simple Book Markers

You can make pretty and useful book markers by cutting across the corners of envelopes which have been used. These markers keep the place nicely in your book since they are to be slipped over the top corner of the page you want to mark.

You can decorate these envelope corner book markers with crayons or cut-out pictures. If the envelope from which they are cut has a pretty colored paper lining inside, remove the lining from the corner which you cut off and paste it over the outside of your book marker. This makes a gayly-colored marker which shows up well on the page.

While you are making these book markers you may think of a friend or two who might like some. Several such markers tied together with a bit of bright ribbon or tinsel cord make a pretty gift.

French Liner to Use Seaplane For Ship-to-Shore Air Mail

Paris.—A convention has been signed between the French Ministry of Air and the Transatlantic Air Company establishing conditions for air mail service between the French liner Ile de France and the American and French coasts.

Under this convention the Air Ministry has agreed to pay slightly more than $6,000 for the establishment of a seaplane and a catapult on the Ile de France and another sum of $5,250 for each flight, provided that the airplane takes off from the ship not less than ninety miles from the port of destination. The agreement will run until March 31.

The same air transport company has also agreed to establish a service in connection with steamers between Martinique and Trinidad.

A "Victorian Angel"

Car-Bus to Call For Passengers

English Railway Company Experimenting With New Railway Car

A new vehicle which will call for commuters at their front doors, climb on the tracks at the railway station for the trip to the city, and then climb off again when the city is reached and carry its passengers through the streets for delivery at their offices or other destinations is being tried in England by the London, Midland and Scottish Railway Company. Says Dr. E. E. Free in his Week's Science (New York):

"The vehicle's secret is the possession of two sets of wheels; one set provided with pneumatic tires for road travel like an ordinary bus, the other equipped with steel tires and flanges for travel on rails.

"Power is provided as in ordinary buses or rail cars, by a gasoline engine like that of an automobile truck. Drive and control are similar to those of ordinary buses.

"Special machinery is provided by which the driver can raise or lower either set of wheels, so that one set is out of the way while the other set is in use. Air-brakes will work on either set of wheels, so that the vehicles may operate either as a one-coach railway train, with all usual conveniences and safety appliances, or as a road bus like any other. Competition with buses has dealt severe blows to British railways, largely because the buses make as good time for short trips as do the trains, and do not require changing vehicles at railway stations.

"The new rail-and-road vehicle will make still better time, it is expected, than ordinary buses, since it will be able to run faster while on the rails than a bus can run on the road. At the same time it will have all the convenience of the ordinary road bus."

Not For Eating

To most of us a turkey has no significance except as the "centre-piece" of a Christmas dinner, but there are a number of turkeys which are in no danger of gracing any festive board. They are much too precious for that.

These turkeys belong to the champion class. Real aristocrats, they win prizes at poultry shows and command prices that may be as high as $1,250. And no one is likely to give that for a Christmas bird.

Quite possibly, for eating purposes, some of these turkeys would be bad bargains at the price of an ordinary "table" bird. That is certainly the case with other animals. A champion ram, valued at some thousands, was once killed by mistake, and a roast cut from it was served to its owner and his guests. The ram had lived a long time, and this expensive joint—possibly the most costly ever cooked—was so tough that it was uneatable.

The Black Reaper

Cancer ends 7,912 Canadian lives every year. Periodic Health Examination frequently reveals this terrible destroyer in incipient stages, when there is an excellent chance of curing it. Universal Periodic Health Examination would make the cancer death rate dwindle sharply. The public must be led to conserve health by adopting the physical examination scheme.

Visitors

The smoke of camp-fires in the air,
A misty cloud of gray
Against the crimson setting sun,
Down old Manhasset way.

A voice that rivals woodland's thrush
Comes faintly to my ear,
And quite instinctively I know
The Romany are here.

There drifts about the meadow's bloom
The tang of burning wood.
It mingles with the faint perfume
Of savory stewing food.

As twilight draws her velvet robes
To show that evening nears,
Up in the changing shades of blue
A single star appears.

There steals across the distant fields
A vagrant melody,
To rise and fall on winds of dusk—
A Gypsy rhapsody.

—Richard S. Towney in "The Christian Science Monitor."

Liquor Tax Stimulates Bootlegging in Scotland

Glasgow, Scotland.—Officials of the customs and excise departments are now trying to throttle bootlegging operations in this cradle of a "wee drap."

Because the tax on spirits amounts in some cases to two-thirds of the sale price of a quart of whisky, scores of illicit stills have been put in operation in various sections of England and Scotland. Investigation showed the centers of bootlegging activity to be London, Leeds, Manchester, Cardiff, Hull, Birmingham, Bristol, Glasgow and Edinburgh.

Surreptitious handling of the product in gasoline cans has made the trade hard to check. Government officers estimate the cost of distillling a gallon of "moonshine" at 10 cents, the stuff selling for $12.50.

Perfumes, which use considerable alcohol as a base, are also to be investigated, officials said.

The officers estimate a loss of $3,500 in taxes on each 100 gallons sold contrary to law.

New Lens Cuts Off Fuzzy Comet Tails

Pasadena, Calif.—A new lens as companion for the world's largest 200-inch reflector telescope, under construction for Southern California, has been developed at the Mount Wilson Observatory laboratories here, astronomers revealed recently. The new lens is designed to increase tenfold the useful field of the telescope.

F. E. Ross of Yerkes Observatory, is inventor and designer of the lens. Its function is to eliminate coma, or cut off the fuzzy cometary tails registered by parabolic mirror reflectors in photographic images away from the useful center of the mirror. The Ross lens, already tested on the 60-inch telescope, extends the accurate center field of the mirror to three times its diameter, and increases the size of the field 10 times.

Smoked Fish

Fish-smoking operations, which have an important place in Canadian fishing industry, resulted last year in the production of nearly 22,400,000 pounds of smoked fish and smoked fillets with a market value of about $1,900,000. About 60 per cent. of the production was sold on the domestic market and the rest exported.

Listeners Now View Artists at Studio

New Theatre Studio Enables 200 Persons Watch Procedure of Broadcasting

New York—A new radio theatre in which radio listeners may view the radio performance of their favorite broadcasting artists was completed and formerally dedicated at station WMCA recently. In addition to the theatre, three new studios were added to the facilities of the broadcasting station which now occupies two floors of the Hammerstein Theatre Building.

The studio theatre, which measures 25 x 75 feet, has accommodations for 200 people. Artists performing before the microphone in the theatre are presented on a twenty-five square foot stage. A switchboard backstage controls three separate circuits of lights that operate on a dimmer system. Thus any desired stage effect may be obtained by the operator seated behind the scenes.

New type condenser microphones are used on the stage and a specially constructed switchboard has been arranged for the announcer on duty so that he can not only control the various microphones, but the lighting system as well. The foyer and theatre are treated in modernistic style.

Languages Dying Out One By One

One of the most painfully acquired instruments with which man deals and which differentiates him from other animals, is language. By language he not only has animated discourse with his fellows, but he constructs the immortal books which set him laughing or crying, hoping and dreaming.

It would seem that, once a race through the ages has secured such a magnificent instrument it would hold fast to it, never let it die. Yet it is a fact that one by one some of the languages of the little people are dying out.

Within the last hundred years Cornish as a spoken language died out of Cornwall.—Vancouver Sun.

Gabby Gertie

"A successful sleuth is one who can promptly lay his finger on the crux of the situation."

20 Million Year Wood Preserved

Northern Alberta Tar Sands Contain Most Ancient Deposit

Ottawa.—The oldest deposit of preserved wood in the world, its age estimated between 15 and 20 millions years, has been discovered by Canadian Government engineers at Fort McMurray in Northern Alberta. S. C. Ells, an engineer in the federal department of mines and internationally known as an expert on bitumin deposits, made the find which geologists claim to be one of the most important scientific discoveries in recent years.

Deep in the far-famed Fort McMurray tar sands, the wood has lain for millions of years. Sealed tight from the devastating effects of air. When untombed last Summer, it was found to be in perfect preservation. The growth-rings could be counted inside the trunks; the wood might be whittled with an ordinary jack-knife; even tiny insects which fed on the leaves and tender shoots of the growing trees, were preserved in the air-tight chamber. The leaves, themselves were unearthed in fair condition.

Dr. I. W. Bailey of Harvard University, who has been conducting a series of microscopic studies of the wood, practically has established the fact that at least one of the preserved trees is of a type that grows today in Japan. Geologists look upon this as still another link in the chain of evidence pointing to the establishment of the theory that North America and Asia at one time were parts of one huge continent.

Of Jurassic Period.

Geologists, who have been working on the discovery say the wood belongs to the Jurassic period, which dates back between 15 and 20 million years. In constructing the process of preservation, the geologists say the wood drifted down large rivers and lodged on sand bars. The logs and trees were buried by the action of the waves but before oxidation set in, the sand absorbed an inflow of heavy petroleum which was the origin of the famed Northern Alberta tar deposits. At the same time, the bitumin insulated the buried wood from the air, leaving it in its original state of preservation until the hand of man forced the secret many millions of years later.

Curiously enough, the basic principle of the wood's preservation, tar or bitumin, was the same as that employed by the Egyptians in mummifying their dead.

Make Further Studies.

The Dominion Mines Department intends making further field studies at Fort McMurray next Summer and it is probable that geologists from several Canadian and United States universities will be invited to participate. In preliminary excavation work last Summer, the largest tree section unearthed was 40 feet in length with a diameter of 14 inches. Dr. Bailey of Harvard University, who is an authority on such matters, has attached so much importance to the find that he has signified his intention of visiting Fort McMurray next Summer. In a letter to Mr. Ells, he described the discovery as "a most valuable find, deserving intensive study.' '

Geologists say the find may alter, if not revolutionize, some modern theories on what phehistoric vegetation covered this continent. It is the only known deposit of Jurassic period vegetation preserved in its original state and is looked upon as a more important discovery than the petrified trees of Southwestern United States or the semi-carbonized wood sometimes found in coal-beds.

Driving In Winter

The added strain placed on the automobile storage battery in winter, by the increased use of lights, frequent and often prolonged use of the starter, and similar hardships of cold weather car operation, is apt to result in a prematurely run-down battery. It is often possible to avoid this inconvenience by keeping an eye on the ammeter. If the indicator tells you that the generator is not charging at the maximum rate specified in your instruction manual, you may save the life of your battery by having the generator set ahead. When this has been done, the battery will regain its normal voltage after a few hours of driving.

Ireland is waging a campaign against vaccination evaders.

Son in college was applying pressure for more money from home. "I cannot understand why you call yourself a kind father,' he wrote his dad, "when you haven't sent me a cheque for three weeks. What kind of kindness do you call that?" "That's unremitting kindness," wrote the father in his next letter.

Canadian Birch Leading Hardwood

Birch is Canada's most important hardwood. Although the Dominion is generally an importer of hardwoods, in birch her exports exceed her imports. There are at least seven native species, of which the yellow birch is the source of the most valuable timber. It forms more than one-third of the hardwood lumber produced in Canada. Another variety which has a much larger range is paper birch. At present its chief commercial uses are for spool wood and similar classes of turnery. It is the tough resinous bark of the paper birch which supplied the aborigines for centuries with the material for covering their famous birch bark canoes.

The yellow birch is the largest of several species of birch found in Canada, and sometimes reaches a height of from 90 to 100 feet, and a diameter of 40 or more inches. It is known by several names, such as sweet birch, cherry birch and black birch. The most common name, yellow birch, is derived from the colour of its bark, which is straw-colored or yellowish and tattered in appearance, being composed of thin, curly strips which hang loosely from the trunk. The heart wood of the yellow birch is usually reddish-brown in color, while the sapwood is nearly white. The wood possesses many of the best and most useful qualities of the hardwood trees. It is capable of taking a high polish and readily retains stain. It is, therefore, a favorite wood for novelties of all kinds, such as furniture, spools and handles.

The wood wears well and is consequently used to make pulleys, reels, toys, etc. It is frequently treated to resemble mahogany, walnut, and similar expensive woods; and, because of its strength and elasticity, it is used for vehicles, automobile bodies, wheel hubs, trunks and agricultural implements. Yellow birch is also an ideal wood for flooring on account of its smoothness, hardness, strength, and wearing qualities. . Its tendency to decay has discouraged the use to any extent of yellow birch for outside structures, but for all kinds of interior house finish it is extensively utilized.

The yellow birch is essentially an eastern tree, being found in the Maritime Provinces and westward to the Lake of Woods in Ontario. Some 86,000,000 board feet of lumber were manufactured from in it 1928, of which over 38,000,000 feet were produced in Quebec and 24,000,000 feet in Ontario. The remainder was cut in the Maritime Provinces. In Quebec it is the most important hardwood, while in Ontario it ranks second to maple.

Poland Ranks Fifth In Timber Production

The area of forest land in Poland covers 19,500,000 acres, or 20½ per cent. of the territory of the republic. Of this area 6,180,000 acres or 32 per cent. represents State property, and 13,340,000 acres or 68 pe cent. is private property. Nearly all the State forests and 85 per cent. of the privately owned forests are well developed.

Poland occupies fifth place among the timber-producing countries of Europe, coming after Russia, Germany, Sweden and Finland. Although the forest area of Poland is relatively smaller than that of other European countries, where the forests constitute as much as 28 per cent. of the total area, the normal annual yield of timber in Poland is larger than that of other countries, amounting to 34 7-10 cubic feet per acre, as compared with the average European production of 29 11-100 cubic feet per acre. The production of timber in Poland amounts to 6 per cent. of the European output.

Because she has a considerable timber reserve, Poland not only supplies her home market, including all branches of the industry such as wood mills, furniture factories and pulp mills,, but is also able to export large quantities of raw and manufactured timber.

Like Russia, Finland and Sweden, Poland is a great exporter of timber. In 1927 she occupied first place among the European timber-exporting countries. In the following years, due to the dumping of Soviet timber and a fall in the price of this commodity in Europe, Polish exports decreased, although they still form the principal item in Polish exports.

Among the importers of Polish timber Germany stands first. Other importers include England, Czecho-slovakia, Holland, Belgium and France. England imports chiefly raw timber, manufactured timber such as logs, deals, planks and railway sleepers and wooden goods.

"That's a good idea, ma'am," said the new servant, "having soda and water in them bottles with squirts. I've done the scullery floor in no time, and there's three left out of the dozen yet."

"Food Plentiful But Coarse" Says English Tourist in Russia

Soviet Now Welcomes Tourists From Other Countries But Visitors Are Closely Watched and Guarded

Now that the Soviet authorities are allowing, and indeed encouraging, the visits of tourists from other countries, it is interesting to compare the different accounts of their experiences published by these hardy pioneers. It must be clearly understood that it is practically impossible for any tourist to see behind the scenes of Russian life. Watched and guarded by official "guides' and surrounded by spies from the moment they leave the boat at Leningrad until the end of the officially conducted tour, it is not surprising that the general impression is that the U.S.S.R. have no intention of showing their sores in public and that they carefully conceal the grimmest aspect of communist life behind a veil of seeming normality.

Capt. Owen Tweedy, writing in the Fortnightly Review an account of his travels under the auspices of the Soviet Republic, rightly sums up the official aspect when he says:

Russia is quite as suspicious of outsiders, as outsiders are of Russia; indeed to fill up an application for a normal visa to enter the country is tantamount to telling the story of one's life. But Russian policy to-day is to encourage tourists: and a tourist visa is comparatively easy. "Only," says the Soviet, "no visa unless you take our tourist excursions.' I was one among four hundred other inquisitives on a Baltic cruise, who accepted the Soviet terms. All of us got in, save three unfortunate parsons, who were described on their passports as "Ministers of Religion.' "Ministers" are highly political in Russia, and religion is taboo. Three other clerics were wiser in their generation. "Clerks" work in offices: what "Holy Orders" convey to a Russian, goodness only knows. Anyhow, the three "Clerks in Holy Orders" sailed in.

Aften endless delay over passport regulations and the changing of money in Russian roubles, all tourists are divided into small parties conducted by English-speaking and efficient guides (nearly all women) who can be expected to introduce with the tact of a good hostess, a sufficient amount of propaganda to make the trip worth while—from the Soviet point of view. All inconvenient incidents are explained away or carefully ignored. An amusing example of this is given by the writer in the Spectator:

As our car stopped, the driver of a passing lorry shook his fist at us and shouted uncomplimentary words at our chauffeur. The latter sprang out out of the car, ran to the lorry and took its number. We learnt subsequently that the authorities specially desire to make a good impression upon foreign visitors, and that the offender would be dealt with appropriately.

As one of the guides hurriedly remarked, "such incidents gave tourists a bad and wrong impression of Russia."

The food provided for tourists is plentiful but coarse, and if the soup is greasy and uninviting to the epicurian, he may on the other hand console hmself with a generous helping of caviare. The hotel accommodation is also adequate, and cleanliness is insisted upon. Indeed the freshly washed white blouses of the men going about their ordinary business is in pleasing contrast to the filthy rags of the Tsarist peasant. As a further encouragement to civilized behavior, the following notice is posted in one of the big Co-operative restaurants:

Behave Yourself At Table

1.—Wash your hands before eating.
2.—Do not put your hat on the table.
3.—Do not help yourself to salt with your fingers.
4.—Do not share the same plate with another person.
5.—Do not scatter crumbs and cigarette ends on the table.
6.—Do not spit or quarrel at meals.

Despite the efforts of the authorities to bring a semblance of prosperity to their cities and the genuine care given to the upkeep of their museums and state institutions, the whole aspect of Lenningrad and Moscow is one of neglect and decay. As Capt. Tweedy says:

Leningrad itself was like Soissons or Armentieres in 1918. The streets were weed-grown and pitted: the cobbles had lost all symmetry: they had not been touched for years. And the houses were utterly in keeping. There was no plaster on the walls, no paint on the woodwork, and the windows were cracked and dirty. The only shops were Government shops: outside them were long dreary queues. "Ichabod', was written black over this tenement town.

Of these queues much has been written in the past, and indeed Russians must spend more than a quarter of their working day lining up at the various Co-operative stores, first for their food tickets and then for the usually inadequate supply of provisions. As an example of this, a writer in the Star says:

I walked down a typical cobbled street this morning. Nearly all the shops, except a few dirty tailors' places, were "Co-operatives," and had the usual long queue outside of women with baskets. "You're not in the right order. You've pushed your way in," shouted a red-faced woman to a thin woman.

"You liar, I've been here since six o'clock this morning," was the reply.

Posted up in the window was a notice, "No Milk To-day." A little further on, in a Co-operative Butcher's shop I saw the words scribbled in an untidy handwriting, "Meat to-day only in small portions for people with manual workers' tickets and for children."

No wonder that the forgers of manual workers' tickets are doing a roaring trade!

I pushed my way through shopping crowds to the small square in the open air market where the private traders, who are frowned upon by the Bolsheviks, sell their wares. There was an old pair of trousers going for 50s. "Buy some meat. Two roubles (4s.) a pound!" shouted a butcher to me, brushing away he flies from the dirty scraps of bone and flesh littered upon his wooden trestle.

A peasant woman sat on the ground with a little attache case of the kind one buys in Woolwo"th's. A small crowd had gathered round her. Peeping over the people, I saw that the contents were two or three dirty portions of butter. "How much?' shouted somebody. "Fine butter, eight roubles (16s.) a pound," she said. Most of the people shrugged their shoulders and walked away.

It must be confessed, however, that although the Russian worker of to-day is poor and still inadequately housed, although he stands for hours in the queues for his food, and luxuries are unknown, his mental recreation is well cared for. Opera and plays are accessible to him, very often free. He can visit the various museums and be told the history of the exhibits. When in need of a holiday he can go to one of the excellent rest houses on the islands surrounding Leningrad. Only the tourist, as he struggles through the customs at the end of his too well conducted tour, wonders if Russia has merely exchanged one tyranny for another.—"Review of Reviews."

Nativity

Now that the winter sky was cold
And breath of oxen hung more white
Than starshine or that candlelight,

Her hour was come, who sensed no gold
Nor frankincense nor any myrrh
In darkness closing over her.

The streets of Bethlehem were wide
And hollow beneath Joseph's feet
Who found no star his eyes could meet.

Gorged with Rome's taxing, on his side
The tavern-keeper snored his fill.
Pale ghosts of sheep strayed on the hill.

And numb men, roused from frightened sleep,
Lit hasty fires in frozen grass
To tell strange dreams till the night pass.

The oxen watched above that deep
Where love goes crowned through love undone.
At dawn she lived, and knew her son.
—Henriette De Saussure Blanding.

Grew Up With Railway

To follow the growth of a great corporation from its early days of struggle to the attainment of fame as the world's greatest privately-owned transportation system has been the lot of George T. Coleman, recently appointed to the post of superintendent of transportation of eastern lines of the Canadian Pacific Railway, with headquarters in Montreal. Born in 1875 at Carleton Place, Ont., then, as now, the junction of the Ottawa and Brockville lines, he grew up watching switching operations in the local yards and in 1893 joined the company's service as agent and operator on the Lake Superior Division and travelled from coast to coast in the performance of his duties in the ensuing years. Thus, he was stationed at North Bay, Carleton Place, Sudbury, Revelstoke, Schreiber, White River, and Chapleau. From 1911 to 1916 he was at Moose Jaw, and in January, 1916, was moved to Toronto as car service agent, coming to Montreal in 1918 as inspector of transportation, from which appointment he is promoted to his present position.

Illinois Grower Seeking Lettuce of Pumpkin Size

Nrbana, Ill.—To raise heads of lettuce the size of pumpkins is the aim of Charles E. Durst, University of Illinois horticulturist.

Durst believes it possible to produce strains of lettuce that will have greater adaptability to seasons, opening the way for growing of lettuce in warmer climates.

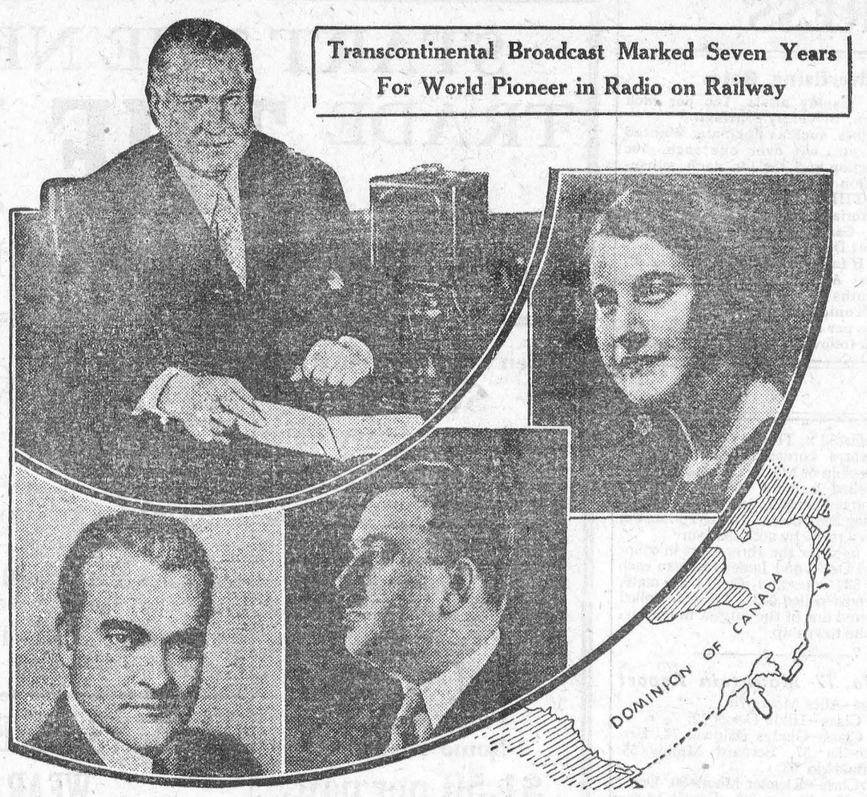
There are more than 100 cultivated varieties of lettuce, but Durst says that the French variety of Cos lettuce is the only cultivated one which gives evidence of having quantitative factors dominant to those of the wild.

3 Men Can Push Engine Weighing 417,500 Lbs.

Boston.—Although weighing 417,500 pounds—slightly more than 208 tons—a new type locomotive placed in service on the New York, New Haven & Hartford Railroad, can be pushed along a stretch of level track by three men.

The huge engine will be used for experimental purposes on a freight route between New Haven, Conn., and New Bedford, Mass. It is equipped with a new type of bearings.

Transcontinental Broadcast Marked Seven Years For World Pioneer in Radio on Railway



On New Year's night, the Canadian National Railway system, first railway in the world to equip its trains with radio and to buid up a chain of broadcasting stations, celebrated the seventh anniversary of its service to thousands of unseen listeners. The event was marked by a concert, broadcast from Montreal through sixteen Canadian National and associated stations from one end of Canada to the other.

Sir Henry W. Thornton, Chairman and President of the Railway, delivered a short address, and W. D. Robb, Vice-President, who has jurisdiction over the radio activities of the system as well as over other departments, spoke briefly in French.

The orchestra was conducted by J. J. Gagnier, well-known Montreal musician, and the soloists were Joan Elwes, the celebrated English soprano, and Henri Pontbriand, tenor, who has a high reputation in both Europe and the United States.

Sir Henry Thornton, seated in front of the microphone, is shown above on the left. Joan Elwes is on the upper right, and the other two photographs are, left to right, Henri Pontbriand and J. J. Gagnier.

Praise Produces Amazing Results

Unkind Words Often Are Detrimental While Constructive Praise Works the Other Way

A landowner in the Highlands of Scotland formerly was distressed by the indolence and untidiness of his tenants, who took no pains whatever to keep their little homes and gardens in order. He was always talking to the people about his, but his scoldings and "preachments" had not the least effect.

One day he went to see a lady who also was the owner of some land. But how different in appearance was her property from his own! Here every cottage garden was gay with flowers; all the little houses were clean and neat.

When the visitor, in surprise, inquired how this happy state of things had been brought about, the lady told him that it all began with her appreciation of one single flower.

"One day,' she said, "when I happened to be visiting one of my cottagers, I observed in the rough neglected piece of ground behind the house, a marigold blooming amid a crowd of weeds, I said to the cottagers, 'What a beautiful marigold you have here.' The man seemed greatly pleased with my remark and from that time, entirely of his own accord, with no recommendation on my part, he began to cultivate his garden.

"One after another his neighbors shamed by the contrast between his ground and their own, followed his good example and that man has lately gained the first prize for flowers grown in the district."

Such was the result of a kindly word. A little bit of praise is more likely to do good than all the scoldings in the world.

Lunch Hour is Now Put to Various Uses

New York—No doubt there was a time when the average office worker devoted his or her lunch hour to eating lunch. If so, those days are certainly past; the hour for dining has given way to the ten-minutes-for-a-sandwich-and-a-cup-of-coffee, and the leisurely luncheon has been abbreviated to a quick lunch. Why? Not only because the cafeteria and the soda fountain, in their anxiety to obtain quick turnovers during the mid-day rush for meals, have provided the means for "service". Clerk and stenographer, bookkeeper and office-boy, and the "big boss," too, all have other, and better, things to do during lunch hour. Shopping eats up more time than eating. "A little fresh air and exercise," while not taken as a substitute for food, seems to be what some are looking forward to when they think of "lunch hour."

Recently some moving picture houses began running one hour shows at reduced price and many now "take-in" a picture, if not instead of food, then in the time when they are supposed to be eating. The night student "grabs a bite" so that he can have time to do his homework. And the office boy takes the telephone girl to a place where they can dance. Who remembers the leisurely days before the war?

Boy Wins Wheat Award

One of the Wheat Pool Experimental seed plots, conducted by Wm. Russell, aged 14, has been graded and the results sent to Cardross, Sask., from Regina. The boy was awarded 92 per cent. on his care of the plot, anything over 70 per cent. entitling its holder to enough registered wheat to sow an acre in 1931. The six kinds of wheat grown in the plot were graded as to their desirability in comparison with Marquis as follows: Marquis, 100 per cent; Reward, 101; Garnet, 102; Renfrew, 103; Supreme, 108; and Ceres, 115.

Blue and Yellow Hats, Spring Styles for Men

Manchester, Eng.—Blue and yellow hats for men, designed for Spring wear, are on exhibition here. There is "tangerine," for instance, a style as brilliant as the fruit itself, with a whitish silken band and thin brown binding; a blue rivaling tropical skies; "pimpernel," a rich scarlet; a "Roman blue," and "sunshine," a delicate canary yellow.

The Brave Goloshes

Millicent Milligan and Margery John
Sturdily put their goloshes on,
And with caps of red and coats of brown
Were as fluffy and warm as eiderdown;
"Let's climb the hill again.
What if we spill again!"
Said Millicent Milligan
And Margery John.

They tramped to school through paths of white,
Errands for Mother were a dear delight;
And the brave goloshes seemed to say,
"O winter time's the time to play!
Come over the hill again,
Baskets to fill again,
Millicent Milligan
And Margery John."

Two little girls grew tall and strong,
On their cheeks a rose, on their lips a song;
And they laughed as they tramped through falling snow,
"We can go wherever goloshes go;
And go they will again,
Over the hill again,
For Millicent Milligan
And Margery John!"
Emir F. Ammerman.

Men to Bake, Set Table and Serve in Iowa Course

Ames, Iiwa.—Men students of Iowa State College believe the husband of the future should know as much about kitchen and dining room procedure as his wife.

A group of them started studying foods a year ago. But they are not satisfied, according to Miss Louise L'Engle, associate professor of foods and nutrition, and are demanding practical work. They want to learn how to bake good bread, carve meat and serve foods correctly and the proper places for all plates and silverware in setting the table.

A new course, including twelve laboratory periods, is to be offered them next quarter, Miss L'Engle said.

The "perfect wife," at least in theory, will be the subject of a course in "home relationships" next September. The course, a combination of psychology and sociology, will delve into such subjects as the mother-in-law, the favorite child, spiritual development of individuals within the family and the attitude of parents towards children.

Marriage of the Week-Minded

Greater restraint should be placed on the marriage of persons of weak intellect. A girl of this description was about to be sent to an institution when a man of exceedingly low mental capacity came forward and proposed marriage as the solution. This was considered a fine idea and a clergyman was quite willing to perform the ceremony, notwithstanding the fact that his fee had to be taken out in promises. No one stopped to think what the ultimate cost to the community would be! Ten years later a letter was received describing a wretched home. It proved to be that of the above woman, now the mother of three neglected children.—J. J. Kelso.

An Irishman and Englishman were sitting together discussing matter as to who could see farthest. "See that steeple," said the Englishman, pointing to a steeple far away. "I can see a mosquito sitting on that." But Pat was not to be outdone. "Begorra," he exclaimed, "I saw 'im wink."

Only Two Fill Role Of True Londoners

People Who Can Qualify For Title Are Scarce

True Londoners seem to be scarcer than true New Yorkers, the reason being that qualification for the title is more restricted. According to Sir Arthur Keith, noted British anthropologist, a true Londoner is one who was not only born in the metropolis, but whose two parents and four grandparents were also born here.

That limits the field severely, particularly as in Georgian days London was much smaller than it is now, not only in population, but in extent. So far, Dr. T. B. Layton, a surgeon friend of Sir Arthur's, has been able to find only two persons who fill the requirements. Dr. Layton has been making a four-year search.

The true Londoners he discovered are Frances and Joan Curtis, daughters of Charles Curtis of Streatham. The Curtis family has lived in Streatham and Balham for about 200 years. Mr. Curtis's grandfathers and grandmothers lived there, and his wife's parents lived in Balham. There was a Curtis dairy in Balham 20 years ago, and the same firm is now connected with a big London milk supply firm.

The search took Dr. Layton all over London, even as far east as the Isle of Dogs, where he learned of an old lady who, it was thought, fulfilled the contract. Her parents and grandparents had lived in the same cottage she still inhabits, but on cross-examination it was found out that one of her grandparents came from the country, so she was ruled out.

Art Temporarily Ousted In Bulgaria

Sofia, Budg.—Bulgaria's new holiday of land, dedicated to peasants, was celebrated throughout the whole country on Dec. 14, at 1200 simultaneous meetings addressed by priests, teachers and agricultural experts. The Sofia conference was held in the National Theatre and for two hours tomatoes, beans, grapes, pumpkins, native cows, Berkshire hogs and Leghorn hens occupied the stage which heretofore has been devoted exclusively to Carmen, Faust and Shakespeare.

Gregore Vasileff, Minister of Agriculture, extolled the riches of Bulgarian soil, the exemplary qualities of the peasants and the substantial progress made in the realm of agriculture.

Mr. Vasileff has proposed that this annual holiday of land be celebrated simultaneously in all agricultural countries and has already received a favorable response from several states. The purpose is to form an enthusiastic movement in favor of farming, which will assure the villagers of the attention and support they need and bring about the necessary improvement in their situation.

She: "I don't think I should let you kiss me before we're engaged."

He: "But, dear, that is the quickest way of bringing about an engagement."

Mother (teaching nursery rhyme to little daughter): "Ding dong dell, pussy's in the well. Now, what comes next?" Up-to-date five year old: "Pussy wants a coroner."

Owl Laffs

Imitation may be the sincerest form of flattery, but in business its chief appeal is price. That of the genuine is service.

"Mother, home and heaven" seems to be giving away in the cities to "man, hotels and highballs."

A Chicago woman came into a lawyer's office and said to him:

Woman—"I want a divorce."

Lawyer—"Certainly. For a nominal fee I will institute proceedings, and should experience little difficulty in procuring it for you."

Woman—"What do you call a 'nominal fee'?"

Lawyer—"Five hundred dollars."

Woman—"Nothing doing. I can have him shot for $10.00."

Common sense is so uncommon.

The difference in a financier and a fee-naan-cier is about a million dollars.

Patient—"I say, doctor, don't you think it would be a good idea if I were to pack up and go to some place where the climate is warmer?"

Doctor—"Good heavens! Isn't that just what I've been trying to prevent?"

We Present

A youth of distracting physique
Recast from Athenian Mould;
A plastic creation,
A reincarnation
Of one of the heroes of old.

A vigorous, sinewy bloke,
Unsullied of cutis and limb.
Both ways from the middle
As fit as a fiddle,
Carnera has nothing on him.

He rises each morn with the sun,
Infected with pepper galore.
He capers like Fairbanks
Forgetting his bare shanks
All over the bed chamber floor.

When choosing your favorite son
From all of the muscular lads,
Remember that cutie
Of masculine beauty:
The guy in the underwear ads.

The Dotted Line

Some people are like pins, pointed in one direction and headed the other.

After we grow up we realize that school days were holidays. True friends demand nothing from one another. Credit is one thing the less of it you need the more of it you can get.

Grandma—"It doesn't do much good to spank a girl after she's eighteen, nowadays."

Grandson—"No, Granny, but it's lots of fun."

Truth always has its enemies. Those who are afraid of it and those who misunderstand it.

A B C D P Sou p,
P Soup O K 4 A B.
I C D P Soup,
P Soup O K 4 Me 2.
I N A B 8 D P Soup,
V 8 it P D Q.
Sounded like boop-boop-adoop
'Cause we didn't have to chew!

Too many people have the habit of doing a thing twice to get it done once.

Neck and Shoulder Neuritis Attacks Closed Car Drivers

Automobile drivers in France have fallen prey to the disease of neuritis of the neck and shoulders, according to a report of the American Medical Association. It is said to attack persons driving closed cars who have gained the habit of leaving the window on their side open so that they may signal with their hands for turns and sudden stops.

Operators of left-drive automobiles are said to have been affected on the left side of the neck while drivers of right-drive vehicles are troubled on the right side. It is believed that when the body, warmed by riding in the closed car, is suddenly attacked in a small location by drafts of cold air the disease gains foothold in the place affected by the draft.

Persons who drive open cars are not subject to contract the disease, it is reported.

Farm Is Ideal Place For Married Life

Toronto, Ont. — The ideal background for successful marriage is on the farm, Mrs. J. Alex Wallace, of Simcoe, told delegates to the United Farmers of Ontario convention here.

"On no place but the farm," she said, "is the woman more nearly the partner to her husband that God intended her to be." Mrs. Wallace boasted (amid laughter), that she knew where her husband was at almost any time of the day.

"Pitchers' Elbow" New Disease of Broken Bones

Muscular Contraction Results in Fractures Physician Finds; 4 Cases Reported

"Pitchers' Elbow" is a new disease caused when baseball players actually break off small bits of bone inside the elbow joint by the mere force of muscular contraction, according to Dr. F. J. Kirby, of Baltimore, who recently reported four cases he had examined to the American Medical Association.

When a pitcher winds up, Dr. Kirby points out, the arm is frequently bent at the elbow joint. When the ball leaves the hand the arm is straightened and rotated very rapidly to give the necessary twist to the ball in throwing curves and "drop" balls. This acts mechanically, Dr. Kirby explains, to bring the corner of the head of the lower-arm bone, called the radius, violently against the end of the bone of the upper arm, called the humerus.

In all of the four cases examined, the result was found to be a small piece of bone at the end of the radius chipped off, much as a small piece of the bone handle of a cane or umbrella may be broken off by a sharp blow such as dropping on a stone sidewalk.

The loose chip of bone inside the joint then proceeds to give great pain and to cause inflammation so that it requires removal by a surgical operation.

The muscles and bones of the human body have been developed side by side in the process of evolution, so that even extreme contractions of the muscles seldom are able to break the bones upon which the muscles depend for support. But activities like that of throwing baseballs, with sharp breaking curves to fool the eyes of the batter, are new things in evolution, and may subject the muscles or bones to new trials for which Nature has not provided. Often, complaints of pains about the knee joints and sometimes about the backbone itself, made by tennis players, have been traced to chipped edges of the bones, which cause the same kind of inflammation and pain.

"Is it very far to the next town?" "Well, it seems further'n it is, but it ain't."

Let these 6 vital Salts rid you of PIMPLES

Would you like quickly to free yourself of those hideous pimples—those unsightly blackheads—and have that smooth and soft skin perfection you've always envied?

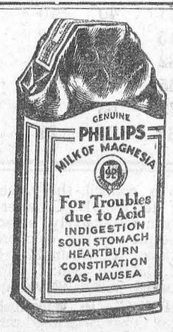
Do you want to have eyes as dazzling and bright as water dancing in a summer's sun?

Would you like to enjoy glorious health with plenty of energy and possess a keen mind?

Then take a quarter teaspoonful of Kruschen Salts in a glass of hot water every morning before breakfast!

Kruschen is a combination of the six vital salts which your nerves, glands and body organs ought daily to receive from food if they're to function correctly and which are impossible to obtain in these days of modern cooking.

Kruschen swiftly clears your blood of those harmful acids which cause your skin to erupt—you'll possess a skin like velvet, and a health perfection you didn't think possible!



Too much ACID

Many people, two hours after eating, suffer indigestion as they call it. It is usually excess acid. Correct it with an alkali. The best way, the quick, harmless and efficient way, is Phillips' Milk of Magnesia. It has remained for 50 years the standard with physicians. One spoonful in water neutralizes many times its volume in stomach acids, and at once. The symptoms, such as headaches, gas, heartburn, etc., will disappear in five minutes.

You will never use crude methods when you know this better method. And you will never suffer from excess acid when you prove out this easy relief. Please do that—for your own sake—now.

Be sure to get the genuine, prescribed by doctors for conditions due to excess acid. It is always a liquid; it cannot be made in tablet form. Look for the name Phillips' and the word *genuine* in red.

THE WINCHESTER PRESS

The Press has a guaranteed circulation of over 1000 in the district shown on the map to the right. It was established in 1887 and is today the Largest and Leading Newspaper in the County of Dundas.

Dundas, for its size, is the richest and most progressive County in Ontario. Winchester is the centre of the County and has about 1250 of a population.

The Press is published every Thursday. Subscription $1.50 in advance, foreign $2.00 Member of the Canadian Weekly Newspapers Association.

THURSDAY, JANUARY 8th, 1930.

THE TEMPERANCE PARTY

The Temperance party in Ontario, and indeed in Canada, has been thrown back to where it stood over twenty-five years ago. It stands alone. It was thrown out of doors by the Conservative party under Premier Ferguson, and it has now been abandoned by the Liberal party under its new leader. Looking back over the years, the Temperance party never gained much under any political party. In fact it may be truthfully said that both political parties used the Temperance party for their own aevantage, and when they found it was no longer to their advantage they dropped the connection. Mr. Rowall, in his fight to close the bar-room, did splendid work, and has always proved himself a true temperance advocate. Sir James Whitney was a strong politicrl leader, and under his administration the temperance party received fair play. But aside from the two above mentioned political leaders, the Temperance party has fought its own way, and been able to direcct public opinion to such an extent that they were drawn into party fights, and, in Ontario at least, politics has a stronger hold on the general public than has the cause of prohibition. The evils that are associated with the liquor traffic are too apparent, and the misery caused by those who are addicted to the habit of using intoxicants to their own, and their families' destruction, is not lost on the public mind, and every day the temperance sentiment is growing stronger in Ontario. The increase in illegal traffic, or bootlegging, the increase in automobile accidents, the number of drunken men and women to be seen in public places, and the terrible waste of money is gradually but surely impressing itself on the public mind, and the day is not far distant when a candidate for political honors, whether he calls himself Liberal or Conservative, will have to first show himself, not only a temperance man in habit, but in principle, and one who will support the cause of prohibition when it again becomes a question of political expediency. As the Press has on several occasions remarked, the Temperance Party has received a severe slap from both Conservative and Liberal parties, but the time is not far distant when both those parties will be again seeking the favor and gladly welcome the assistance of the Prohibitionists.

The men who stand for prohibition are real men. They live for a purpose and they sacrifice for a purpose. We have many examples of such, but none more worthy of notice than the late Charles Evans Hughes, a noted lawyer and Governor of New York State. The liquor men wanting someone to contest Constitutional Prohibition in the Courts, offered Hughes a cheque for $150,000 to plead their cause. Failing to buy Mr. Hughes, they next went to William Howard Taft, and placed before him a signed check, telling him to fill it in for any amount he wanted. The reply of this statesman will be memorable: "Gentlemen, you couldn't pile euough gold on this continent to induce me to take your case before the courts and before the public, for I will have you know my conscience is not for sale."

A QUITTER

There is something about a quitter that is not admired, even though the act of giving up may in a sense be justified. The public admire a fighter, even though they may call him a fool to continue the fight. When, however, the Mayor of a fair-sized city in the United States resigns his office, and quits the job, because, as he says "he is tired of trying to make the people obey the law," it is little wonder that he gains for himself some unenviable notority, and calls forth some stinging condemnation. This Mayor, Joseph L. Heffernan, has much to say about the indifference of the public toward law enforcement, and refers to the police force in general as easily corrupted, and not in sympathy with law enforcement. One wonders that a man of the calibre of this Mayor, ever having gained the prominence he has. He isn't worth all the publicity he is receiving, and his ideas of the public attitude toward crime and law enforcement is not justified. The public choose men they have confidence in to enforce the law, and to keep order. If the men they choose fall down on their job they are soon replaced. We know that in many of the larger cities of the United States there is much open and defiant lawlessness, and recent investigations have shown how even magistrates and judges of some of those cities have been in league with the law breakers and crime promoters. But an indignant public sentiment has aroused the courts to a proper sense of their duty, and the guilty are being brought to justice and punished for their crimes This Mayor of Youngston, Ohio, is a poor fighter and a poor quitter. The public are indifferent to a certain point but they are not indifferent when their rights and the protection of their properties are at stake.

MUNICIPAL ELECTIONS

The municipal election in the United Counties of Stormont, Dundas and Glengarry are now over, and on the whole there will be very little change in the personnel of the Counties' Council when it meets at Cornwall this month. The most noticeable change will be in the representation from Chesterville. Mr. Wesley Hamilton, who we believe with the exception of one year, represented Chesterville for over twenty years, was on Monday defeated for the reeveship of that village by W. H. Casselman. There have been a few changes in deputy reeves in the Counties, but nearly all the reeves of 1930 have been re-elected.

Winchester Township Election Results

	Limerick	Cass Bridge	Summers	Annables	Ormond	Morewood	Connaught	W. Springs	Totals
Nesbitt	80	59	73	78	50	114	76	52	582

Smith	64	22	26	43	29	81	103	21	389

Municipal Elections

WINCHESTER TOWNSHIP— Howard Nesbitt was elected reeve of Winchester township when he almost trippled the vote of his only opponent, William Hamilton. Nesbitt polled a vote of 582 against Hamilton's 202, which gave him a majority of 386. For deputy reeve William McConnell polled vote of 400 against 273 p lled by Roy Annable, defeating him by a majority of 127. Three councillors were elected from a slate of four. They are: George Brooks, 448; Geo. Ouderkirk 398, and W. Stewart, 511. Ward J. Smith the defeated council candidate, polled a vote of 389.

CHESTERVILLE—Chesterville village only voted for reeve, the four council seats having been filled by acclamation. In the vote, W. H. Casselman polled 254 votes and his opponent, Wesley Hamilton 173, giving Casselman a majority of 81. The councillors acclaimed are: David Allison, Robert J. Barrie, Dr. A. B. Clayton and Thomas Allen.

MOUNTAIN TOWNSHIP—The fight in Mountain Township this year was for the three seats in council, the reeveship positions going to John E. Crowder and and Robert Bryen respectively, by acclamation. The result of the election for councillors follows: C. Wynn, 378; John Cooper, 315 E. Baldwin, 336; T. Stobo who was nominated, polled 184 votes.

WILLIAMSBURG— In Williamsburg township election Oscar Beckstead was elected reeve by acclamation, D. J. Van Allen defeated Robert Colquhoun by a majority of nearly 300 for the deputy reeveship and the three councillors who will sit this year are: Oscar Couglar, John McMillan, Thomas Merkley.

FINCH TOWNSHIP—In the Finch township elections Reeve H. Nugent was elected by acclamation. A. W. McIntyre was elected over Charles Meldrum, by a large majority, and the three councillors are: M. Empey, L. McLean, J. Nephew.

OSNABRUCK—G. Shaver was elected reeve and J. Conners, deputy reeve, in the elections for Osnabruck township. The council for the new year will be F. Johnston R. A. Cook, J. W. Watson.

MATILDA TOWNSHIP—Dr. Alex Clark defeated S. Thompson and G. Shaver in a three cornered fight for the deputy reeveship of Matilda township. Dr. Clark polled a vote of 354, with S. Thompson polling 313, and George Shaver receiving 308 votes. Thomas Johnston was elected reeve by acclamation.

In the fight for the three seats in council, Alfred Deeks and James Milligan each received 532 votes and their team mate, Bazil Strader polled 522. The vote polled is considered one of the largest in the history of the township.

Miss A. M. Coons of McArthur's Mills, is spending the holidays at her home here.

Mr. and Mrs. Howard Wylie and son Clifford, and Mr. and Mrs. A. Riddell, spent Friday at Brockville.

Miss Vera Haggerty, of Domville, is spending the holidays with her parents Mr. and Mrs. E. Haggerty.

Mr. and Mrs S. Coons and family spent Saturday with Mr. Mrs. Ed. Gillard of Chesterville.

Miss Marion Casselmon of Winchester Springs, spent a few days with her cousin, Miss Leona Casselman.

Miss Ruth Harper, of Inkerman spent a few days with her parents Mr. and Mrs. I. N. Harper.

Morewood

Miss Onah McGregor, of New York, spent a few days with her parents, Mr. and Mrs. Daniel McGregor.

Mr. Harold Allison left on Sunday for Ottawa to attend Business College.

Mr. Jack Moore and son, Clarence Moore, of Haddo, and Mr. Joseph Hunter and daughters, Gertie and Winnie, of Toyes Hill, visited on Saturday with Mr. and Mrs. Wilson Steinberg.

Miss Muriel Steinberg spent a few days with Mrs. James Millar of Hadison.

Mr. Clifford Gillispie of Calgary was renewing acquaintances in town on Monday.

Misses Waterson and Stephens of the Melvin Settlement spent Friday with Mr. and Mrs. Wilson Steinberg.

Mr. Harold Swerdfeger and Mr. Morton Marcellus returned to Queen's University, Kingston, on Tuesday to resume their duties.

Mr. Joseph Parkin returned to Steinberg, Ont., on Saturday to resume his duties.

Messrs. Joseph Moore, Daniel McGregor, and Wilfred Hutt made a business trip to Winchester Monday afternoon.

Miss Freda Boyd of Metcalfe was the week-end guest of Mrs. Orrin Dillabough.

Miss Ellis Smith returned to Mountain Grove on Sunday evening.

Mr. Robert Hillis returned to Coe Hill to resume his duties there.

Mr. Ralph Dillabough returned to Westboro on Sunday to resume his duties there.

Cloverdale

Sunday visitors at the home of Mr. and Mrs. Eli Lamoureux Sunday were Mr. and Mrs. Isaac Durant and baby, and Mr. Lewis McGovern.

Mr. and Mrs. Walter Larocque spent New Year's Day with Mr. and Mrs. Jas. Utman, Vancamp.

Mrs. Ira Docksteader and Pearl are under the weather at present.

Miss Olive Hughes left for her school on Saturday after spending the Christmas season at her home here.

School re-opened again Monday after quite a long holiday.

Mr. and Mrs. Willie Larmour of Van camp spent Sunday at the home of Mr. and Mrs. A. Larmour.

Mr. W. Barclay and son Alex motored to Quebec last Wednesday and spent New Year's Day at the home of his mother there.

Mr. Dan Durant spent a few days in Prescott recently.

Mr. and Mrs. Eddie Dignard have moved into their new house on their own farm.

Quite a number of the neighbors gathered at the home of Mr. and Mrs Thos. Stobo New Year's Eve and spent a social evening

North Mountain

Miss Jean Morgan has returned from her holidays and is on the N. M. C. School staff.

Mr. Harry Baldwin left for Hamilton on Sunday where he is taking a Special Course in Manual Training.

Miss Viola Shaw, R. N. of Atlantic City, spent the holidays with her parents.

Miss Edith Allen, who spent the holidays with her mother, has returned to her school at North Bay.

Mr. Frank Earle of Prescott spent part of the holidays at the home of Mr. and Mrs. Wm. Shaw.

Mr. and Mrs. Arthur Allen of Johnstown, who had the misfortune to have their home burned on New Year's morning, are staying with friends in the community.

On New Year's night Rev. and Mrs. H. Campbell entertained the Adult members of the congregation to a party in the basement. A very pleasant time of games and music was provided and afterwards lunch was served.

INNER SPRING **MATTRESSES** FOR COMFORT FIRST

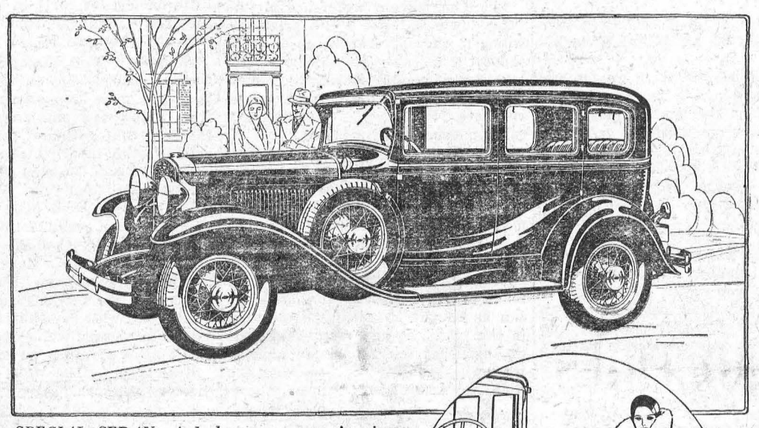
General Motors announces a NEW CHEVROLET SIX

Bigger-Finer Lower in Price

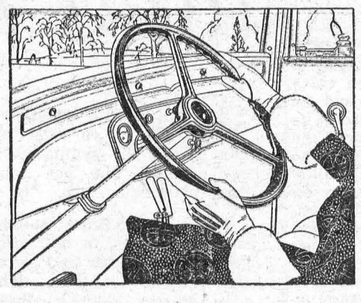
Long, 109-inch Wheelbase . . . New Body Lines . . . Roomier Fisher Bodies . . . De Luxe Wire Wheels . . . Important Mechanical Advancements



SPECIAL SEDAN—A de luxe car . . . six wire wheels, two in fender wells, and chrome-plated radiator grille standard equipment.

CHEVROLET TODAY General Motors and Chevrolet are proud to present a new Chevrolet Six. The new car has a lengthened, 109-inch wheelbase . . . added smartness . . . and many mechanical improvements. Yet it sells at new reduced prices . . . the lowest at which any Chevrolet has ever been introduced.

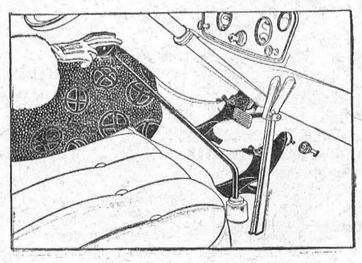
Working with the advantage of a lengthened wheelbase, Fisher craftsmen have been able to design streamline bodies that are far more graceful and beautiful than ever before. Exceptionally impressive is the front view of the car. The radiator has been redesigned . . . it is now deeper and has added distinction. There are new headlamps, resting on a smart tie-bar. De luxe wire wheels, finished in attractive harmonizing colors and with large chrome-plated hub caps, are now standard equipment on all models at no extra cost.



The new Fisher Bodies are larger and roomier. The handsomely upholstered interiors are wider and more comfortable. The driving compartment is insulated with thick, felt-like material on the dash and under the floor mat to lessen engine noise and keep the car warm in winter and cool in summer.

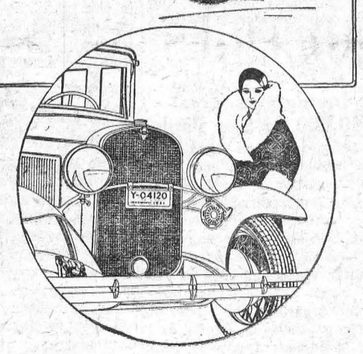
Of course, with the increase in wheelbase of the new Chevrolet, improvements have been made in the chassis. The frame is 50 per cent. stronger. The Lovejoy shock absorbers—front and rear—are more efficient. And there is a new, heavier front axle ensuring strength far beyond all ordinary needs,

An entirely new steering mechanism, of the worm and sector type, gives fingertip control of the wheel in turning, parking and in heavy traffic. Chevrolet's four-wheel weatherproof brakes are



exceptionally big and fitted with moulded linings, which ensure as much as 25,000 miles of efficient service before relining becomes necessary.

All these advancements in beauty, comfort, ruggedness and durability are offered in a car which provides the smooth, quiet, flexible performance of a 50-horsepower, six-cylinder engine. No departure has been made from the basic features of *six-cylinder smoothness and extreme economy* which makes the



Chevrolet Six the best buy of the low-price field.

Bigger—finer—lower in price . . . the new Chevrolet Six is now on display at the showrooms of dealers everywhere. You are invited to inspect the new Chevrolet . . . to ride in it and drive it yourself. If you can afford to buy *any* car . . . the new Chevrolet Six, at its extremely low prices, is easily within your reach.

Chevrolet's policy has always been one of service to the public . . . The GMAC plan of deferred payments offers the lowest financing charges available . . . and the General Motors Owner Service Policy pledges lasting satisfaction.

The World's Sheep

There are estimated to be 700 million sheep in the world, equal to about one for every three people. Russia leads with 116 million, with Australia next with 90, and the United States has about 47 million. The world's wool clip is some 3,500 million pounds.

Economy Corner

Spice Pudding

One-half cup brown sugar ½ cup shortening, 1 cup molasses, one egg, ½ cup boiling water, 1 teaspoon baking soda, ½ cup seedless raisins, 2 cups flour, 1 level teaspoon allspice and cinnamon. Heat the molasses and dissolve in it the fat and sugar. Sift spices and flour. Stir flour into molasses; add fruit; beaten egg and baking soda, dissolved in boiling water. Bake in a slow oven 50-60 minutes. Serve this with ginger marshmallow sauce, which is good also on a steamed pudding.

Griddle Cakes

Mix and sift 3 cups flour, 3 teaspoons baking powder and 1 teaspoon salt. Beat 1 egg until light, add gradually ¼ cup sugar and 2 cups milk. Add to dry ingredients with 2 tablespoons melted butter. Fry on a hot, well-greased griddle.

Graham Cake

Twenty-five Graham crackers (rolled), 1 scant cup sugar or syrup, 1 rounding tablespoon of butter, 2 eggs, ½ cup milk, 1½ tablespoons flour, 1½ teaspoons baking powder, 1 teaspoon vanilla, ½ cup nut meats.

Bream butter, add sugar, eggs, milk, flour into which baking powder has been sifted, graham crackers and vanilla. Bake in two layers. Put butter sauce between layers and beaten egg white with little sugar on top of cake, and brown in oven.

Butter Sauce—One-third cup butter, 1½ cups confectioners' sugar, 1 teaspoon vanilla, milk or water. Cream butter, add sugar; continue heating until smooth. Add water or milk; drop by drop, until of right consistency to spread. Add vanilla.

Southern Cornbread

Two cups flour, 2 cups cornmeal, 1 cup sugar, 1 teaspoon salt, 3 tablespoons melted shortening, 2 cups milk, 4 teaspoons baking powder. Sift dry ingredients thoroughly; add melted shortening and milk. Heat well and bake in a good hot oven 30 to 40 minutes.

Matrimonial Cake

Three cups dates, ½ cup sugar, 1½ cups flour, 1½ cups water, ½ teaspoon soda, ½ teaspoon salt, 1 cup brown sugar, 1¼ cups rolled oats, 3/4 cup shortening. Cut dates in pieces and boil to a paste with the sugar and water. Sift flour, soda and salt together. Add the brown sugar and rolled oats to the flour mixture. Cut in the shortening. Spread half of this in the bottom of greased pan. Spread date past eover this and cover with remaining oatmeal mixture. Bake in shallow loaf pan and when cool cut in oblong pieces and serve from the pan.

Swedish Stew

Two and one-half pounds chuck beef, 3 or 4 carrots (sliced), 3 good-sized onions, 1 can of peas, 1 tablespoon tapioca, 1 slice bread (crumbled), sprinkle salt, 3 cloves.

Put into bean pot in layers, and cover with cold water. Bake four hours in gas oven or five hours in coal range.

Lumber Jack Macaroni

Half-pound macaroni (2 cups uncooked), 3 quarts boiling water, 1 tablespoon salt, 2 cups grated cheese, ½ cup Worcestershire sauce, ¼ cup chili sauce, 3/4 cup melted butter.

Cook macaroni until tender in boiling water to which salt has been added. Drain. Have large platter very hot. Spread the cooked macaroni on the platter. Sprinkle with cheese, Worcestershire sauce and chili sauce. Pour hot melted butter over all. Mix with two forks until sauce is cream. Serve at once.

Duck With Orange

Place the duck in a pan with some butter and set in the oven to brown. Then allow to cook slowly. Add a half pint of cooked meat juices (juice from veal) and allow the duck to remain in the oven until well done.

Take out duck from the pan and then remove the melted fat from the surface of the sauce. Boil the sauce down somewhat and then strain it. Add the juice of 2 oranges. Pour this sauce over the duck and place under a salamander to give color. Then sprinkle with the rind of one orange and one lemon sliced into very fine strips and previously boiled in water for 6 or 7 minutes.

Straighten the duck in the dish and encircle it with sections of orange.

What New York Is Wearing

BY ANNABELLE WORTHINGTON

Illustrated Dressmaking Lesson Furnished With Every Pattern

2852

Interesting detail gives chic to this charming day dress of black canton crepe.

There is shirring to narrow the effect across the hips. The white crepe vest and self-covered button trim also give a very slimming effect to bodice. The shirring below the elbows of the sleeves is quaint new fashion.

It's tremendously smart. It's easily copied.

Style No. 2852 may be had in sizes 16, 18 years, 36, 38, 40 and 42 inches bust.

The inky browns, dark greens and rust reds are having quite a vogue in Paris. They are youthfully chic in the crepy woolens, marocain crepe and velvet, fabrics that adapt themselves perfectly to this model.

Size 36 requires 4 yards 39-inch with ¼ yard 9-inch lace.

HOW TO ORDER PATTERNS

Write your name and address plainly, giving number and size of such patterns as you want. Enclose 20c in stamps or coin (coin preferred; wrap it carefully) for each number, and address your order to Wilson Pattern Service, 73 West Adelaide St., Toronto.

Japanese Immigrants Total 100,000 in Sao Paulo

Rio de Janiero.—Japan ranks as one of the leaders among countries which have contributed most to increase Brazil's population during the last decade, official figures reveal. The State of Sao Paulo now has well over 100,000 established Japanese immigrants, an increase of 15,000 in the last three years. Japanese immigration is so well organized, by virtue of a special treaty between Brazil and Japan, that a jobless Japanese is a rarity in Brazil.

The majority of the Japanese are devoting themselves to coffee planting, although a great many cultivate rice and cotton. Rice fields owned by Japanese in the Triangulo Mineiro district enjoy a reputation throughout Brazil for the quality of their crops.

The value of the annual production of Japanese residents in Brazil is estimated to total $12,000,000, with cotton worth $10,000,000 leading the list.

One of the chief tricks of Howard Thurston, the magician, is to make a horse vanish into thin air. Pooh, Pooh! Henry Ford did that thirty years ago.

The Little Town

It is said God must have loved the common people for He made so many of them. Likewise He must love that little town for He made so many of them and its popularity grows since the automobile makes it more and more possible to enjoy rural life no matter what the occupation.

Is is any wonder that many people prefer the little town to the congested city with its crowded streets filled with strangers, its hurry and the deafening noise of traffic. It feels good to return to the quiet and clean fresh air of the little town where everyone knows everyone else. It is true Mrs. Grundy sometimes allows her tongue to be a little sharp at times, but people are mostly kind and considerate. Even Mrs. Grundy, during a crisis, turns in with a willing desire to help if occasion demands it.

The nearby meadow and woodland are quickly reached if desired where the plump little gray squirrel with his saucy erect plume, balances himself high on a topmost branch, gently swaying with the breeze and busily eating a nut precariously nipped off from the very end of a twig. Oh, little gray squirrel, you too have your troubles, but who would guess it, seeing you gaily swinging there. The gentle roll of the far off hill slowly comes to view, as the warm sun's rays quietly dispel the mist, saturated with the atmosphere o fthe fresh country air. How good it makes one feel to breath it in and rest the eye on the hill's curtain of green.

But if we have a preference for the little town and enjoy the privileges which it offers, it is also up to us to support it in every possible way. Altogether we are the merchant, farmer, doctor, lawyer, editor, clerk, housewife, etc. We are one of these, each earning his or her livelihood.

Then to create community happiness our support is needed at every turn to keep the wheels going smoothly. Sometimes, thoughtlessly perhaps, it is felt a few cents can be saved by going to the city, which, by the way, is more than eaten up in gasoline to carry us there. It is even found to frequently happen that things can be bought cheaper at home than in the city. At any rate, what does the small saving amount to anyway when we consider that to exist the small town needs our support wherever it is possible to give it. The old proverb "Do as you would be done by," still holds good and is as true as in olden days. On starting out in the New Year of 1931 remember your town. Be loyal.

Twilight Hour Story

Chapter 6

What Mamma Hen Did About the Cold Wind

The next morning Mamma Hen thought perhaps it would be warmer outside after the nice warm bright sun would come up, for she wanted to give her babies some fresh air and take them out of the barn. So as soon as they were wakened up and each little baby stretched itself and fluttered its tiny wings they all started ou to be near the big barn door. They were scratching around in the straw finding little tiny stones to eat. For mind you chickens like stones to eat with the rest of their breakfast. Their little stomachs are different from ours because they eat them to keep their little stomachs from aching. But if we ate these little stones we would have a stomach ache, wouldn't we? Just then the door opened and the farmer man's boy, Billy, came and opened the door to get George, the horse. This time he saw the chickies. Last time he came in, don't you remember? they hurried and hid under Mamma Hen before he saw them. But this time they were not so much afraid. When Billy saw them he laughed like everything because they were so cute; not loud though, for he didn't want to frighten them. It's always best not to make much noise when little shy birds or animals are around, isn't it? For they are just as afraid of you if you make a big noise as you would be afraid of a big horse if all at once it would jump around and stand on its hind legs. But Billy knew how to act with these little babies, for early in the summer they had a lot of them running around with their Mamma Hens.

He said: "Well, Mamma Hen, you were a foolish chicken to hatch out four poor little chicks so near winter time. How are you going to raise them, I'd like to know, for it is cold outside even now? I guess you are not a very good Mamma to have little chicks this time of year. Why, all the other chickens were little long ago."

Mamma Hen began to think she was foolish too, and wished she had spoken to the older Mamma Hens instead of running off by herself. Now, because she acted like that, she didn't know what to do with her babies. Yes, I'm just sure these little chickens really didn't have a very good Mamma.

Next Week—"The Cold Wind and the New Mamma."

How to Keep Fit in Tropics Subject of College Course

The latest practical invader of the erstwhile cultural curriculum of the American college is a course on how to keep well while travelling in the tropics, to be offered during the coming semester by the University of California extension division. Avoiding various diseases, recognizing their symptoms, safe diet, care of children in hot climates, care of the skin and eyes and sun and mosquito protection will be some of the topics discussed by members of the staff of the Hooper Foundation for Medical Research.

Meanwhile, another pre-travel course at the University will attempt to provide the expectant pilgrim with a general background of political conditions, manners and customs of the various countries of Europe.

Thoughts

Thoughts worth repeating will come to any man if he will, with patient attention, step from thought to thought. He may thus, happily, climb to a view or expression of truth which shall lighten and strengthen his own soul, and radiate through an infinite circle of lives and years.

Too Much Talk

By ANGELA CYPHER

In "The New Yorker"

Too much trivial
Conversation
Spoils the marital
Relation.

All the greatest
Vamps of history
Specialized
In charm and mystery.

If your wedded
Life is seamy,
Strive to look
Aloof and dreamy.

If you have
A sense of humor
Let it seem
Unfounded rumor.

Solemn men
Would pay good money.
If their wives
Were never funny;

Nervous men
Would be more placid
If their wives
Were never acid;

Stolid men
Might grow ecstatic
If their wives
Were less dramatic.

Silence is
A point to score on,
Too much talk
Betrays the moron.

"Island of Solitude" Linked With World

In one of the most lonely spots in the world stands a lighthouse which is "manned" by a Canadian and his wife and children. The lighthouse is that of Green Island, set among the maze of small islands that guard the entrance to the harbor of Prince Rupert on the British Columbian coast. Here, year in and year out, the family light the lamps and safeguard the lives of the many ships making for the harbor. Green Island itself is so small that it is only a dot even on big maps and mariners' charts. It covers barely an acre at high tide—a grim wall of grey rock fringed with green weed set in a tumbling sea. Every evening as dusk falls the keeper ascends the long steps and sets the light shining. Today the "Island of Solitude" is linked with the snow-bound trappers, and the lonely homesteader of the prairies, by the widespread league of wireless.

The honeymoon couple were about to alight from their taxi. "I feel so nervous, George," she whispered; "they are sure to know." But George was resourceful. "Here" he said, "you carry the bag."

Volcano Again Erupts

Interesting and unusual study of firepit of Halem aumau, Kilauea volcano, which recently came to life on Island of Hawaii, south-eastern unit of Hawaiian group, as it appeared at start of its sixth eruption of last six years.

Immunization Test Approved Safeguard Against Scarlet Fever

By JOHN BURKE INGRAM

It is possible to prevent that dangerous disease of childhood, Scarlet Fever and the purpose of our health article for this week is to acquaint our readers with the methods which are used to acquire immunity.

First, it is known that one attack of Scarlet Fever usually but not always protects an individual against further attacks. This is because the bloodstream during an attack of this disease develops a substance which resists any future attack by germs, and the poison or "toxin" which they produce is rendered harmless.

"When scientists found the Scarlet Fever toxin they began to experiment with it, hoping to be able to produce artificially that substance which the blood produces naturally in defending the body against future attacks. They succeeded so nowadays it is possible to secure artificial immunity to this disease, whereas in former years it was necessary to actually experience one attack of it in order to be reasonably immune to all future ones

"This immunization is accomplished by injecting carefully graduated doses of the sterile toxin produced by these germs. The toxin is first injected in small doses, then in gradually increasing doses until enough has been injected to stimulate the body to produce anti-toxin. The toxin used does not contain any germs and of itself is incapable of causing any disease or injury. A person treated thus produces his own anti-toxin, goes about his business and becomes immune to Scarlet Fever without developing the disease.

Doctors, however, do not advise having children immunized against Diphtheria. It is interesting to know why. First of all, let us note the fact that it is generally supposed that adults are immune to Scarlet Fever. This is usually true because so many adults have actually had the disease, even without knowing it. This may seem rather amazing but the fact is, that it is possible to have Scarlet Fever in the form of a sore throat alone. This is often enough to immunize the individual experiencing it against further attacks from the germ. But unless adults have had the disease in this way they remain susceptible to it all their lives. Now since so many people are immune to Scarlet Fever from having had the disease or having had Scarlet Fever sore throat it would be foolish to immunize everybody in a group in attempting to control an epidemic. We would be immunizing many people unnecessarily.

Therefore you can readily see that it was important to devise some method of selecting those susceptible to Scarlet Fever in order to know who should be immunized. Fortunately it was possible to devise such a test. The material used in this test is a dilute solution of Scarlet Fever toxin which has been very carefully standardized. If the person tested is susceptible to this disease a pink spot appears where the needle was pushed through the skin, within 24 hours. This spot begins to fade in a short time.

African Air Route Plans Are Rushed

London-to-Cape Town Service Is Expected to be in Operation Next Summer

London—The British air route from London to South Africa over some of the worst flying country in the world is being pushed ahead as far as Mwanza in the African jungle and by midsummer it is expected that the whole 8,000 mile trail to Cape Town will have been blazed. Passengers will thus reach the Cape in eleven days as compared with seventeen by surface transport. Across Europe they will be taken in huge Handley-Page four-engined Hannibal machines, each carrying thirty-eight, as far as Egypt, where there will be a great flying junction for India and the Far East.

On the southward trip passengers will be carried alternatively in airplanes and flyingboats which will follow the course of the Nile and African lakes to Kisumu. Along the main African route twenty-seven air stations have been constructed, many cut out of the heart of the virgin bush, while at the main stations hotels have been built by the Imperial Airways Company which will operate the route. Thirty intermediate landing grounds have been made and at no point will the crews of the airliners be out of touch with the air station.

Wife (at 2 a.m.): "Wake up, John, wake up! There's a burglar in the next room." Husband (sleepily): "Well, I've no revolver. You go in and look daggers at him."

Writer Finds Four Types of 1930 Girl

One a Good Wife for Somebody Else, Two Have Sex Appeal, One is "Hard-Boiled"

Vienna.—The 1930 girl turned up in her thousands at the Grosser Konzerthaussaal to hear the novelist, Emil Klaeger, analyze her highly modern soul in his long-anticipated lecture. Seventeen hundred girls, between 17 and 25 years old, had obligingly furnished Herr Klaeger with his material by answering a questionnaire which he had sent out.

Herr Klaeger distinguished four principle types. The first, which he christened "Madelon," was that of a comrade, intelligent, eager for all knowledge, anxious to understand everything about young men. She made a great appeal as the ideal wife for some one else. Then came two "sex-appeal" types—those few with inborn, quite involuntary appeal and the many who quite successfully supplied by art the deficiencies of nature. The clearest-cut modern type was the practical young enemy of romanticism, who weighed life and cut out of it all that she felt was of no advantage to her, while devoting herself whole heartedly to what she felt she could enjoy.

Even the young girl of 1930, however, wants to be married, whatever her often highly original conception of the married state may be. And of the 1,700 who responded to the questionnaire, only one was not "misunderstood" by her parents—who, in her case were deaf and dumb.

HEAD HURT?

WORK won't wait for a headache to wear off. Don't look for sympathy at such times, but get some Aspirin. It never fails.

Don't be a chronic sufferer from headaches, or any other pain. See a doctor and get at the cause. Meantime, don't play martyr. There's always quick comfort in Aspirin. It never does any harm. Isn't it foolish to suffer *any* needless pain? It may be only a simple headache, or it may be neuralgia or neuritis. Rheumatism. Lumbago. Aspirin is still the sensible thing to take. There is hardly any ache or pain these tablets can't relieve; they are a great comfort to women who suffer periodically; they are always to be relied on for breaking up colds.

Buy the box that says Aspirin and has Genuine printed in red. Genuine Aspirin tablets do not depress the heart. All druggists.

Rhodes Scholarship Again Awarded To Trinity College Student

Fourth Consecutive Year—1930 Produces Highest Academic Record Since Federation of College With University

Toronto.—The award of a Rhodes Scholarship to a Trinity College Student for the fourth consecutive year has drawn attention to the high academic record of the members of the College. At the Annual Examinations of the University of Toronto in May 1930 the standing of Trinity Students was higher than in any year since the Federation of the College with the Provincial University.

The following students obtained the highest standing in the whole University in their courses: In the fourth year, Mr. J. T. Wilson in Physics and Geology; in the third year, Miss A. D. D. Brereton in Classics; in the second year, Miss C. E. C. Gwyn in Classics; Mr. C. L. M. Douglas in Political Science and Economics; Mr. J. L. Stewart in Law and Mr. A. H. Woodcock in Physics and Chemistry; in the first year, Mr. J. E. A. Crake in Classics. It is interesting to note that Trinity College Students secured the highest place in Classics in the first, second and Third years. In the fourth year Mr. H. R. S. Ryan was second in the first class in the same department.

In other student activities in the University of Toronto, Trinity Students took their full part. On the University of Toronto Intercollegiate Football Team in all the matches against Queen's, McGill and the University of Western Ontario, four Trinity College Students took part.

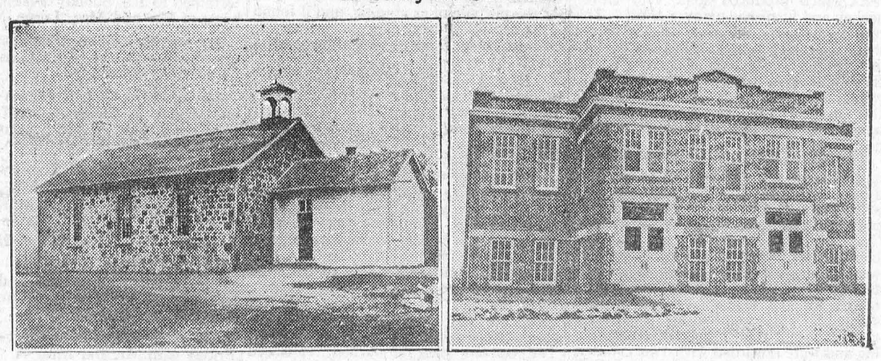
The Trinity College Literary Institute continues to be one of the most important training centres for Public Speaking and many of its members have taken part in the Hart House Debates.

The women students were particularly successful in athletics during the past year. St. Hilda's won the Interfaculty Basketball Championship and were runners up in the Interfaculty Hockey Series. St. Hilda's also won the Interfaculty Tennis Championship.

The members of the Teaching Staff of the College have in addition to their work in the College made important contributions to learning. Special mention should be made of Dr. Mercer's expedition to Abyssinia where he discovered the oldest known Ethiopic Manuscript of the Bible. He will publish immediatel, through Luzac and Company of London a new Edition of the Text of the Book of Ecclesiastes. Professor Hicks has with Professor Ford published a new French Reader. The Time Educational Supplement devoted a lengthy leading article to a most favourable Review of this work.

The Corporation or Governing Body of the College now increased the value of Trinity College Open Matriculation Scholarships by adding ee Tuition for four years. They will now rank among the most valuable Scholarships offered in the whole University. Additional Scholarships have been established in the Undergraduate Course. Trinity Students are also eligible for all Scholarships offered by the University of Toronto at Matriculation and during the Undergraduate Course.

A Study In Contrasts



Progress of education: Above is shown old Innerkip school, near Woodstock, Ont., in which last class was recently held, and also the new school now opened to pupils.

Pasteurized Milk Most Necessary To Public Health

Canned Substitute Advised Where Safety Process Impossible

Every village, town and city in Canada should take immediate steps to prohibit the use of unpasteurized milk, in the opinion of Dr. Fred W. Routley, director of the Ontario Division of the Canadian Red Cross.

"For 25 years we have known that raw, unpasteurized milk is unsafe and yet there are few localities which have by-laws to prohibit its use."

There were only two kinds of milk which could be used with safety, Dr. Routley declared, pasteurized milk or canned milk.

Canned milks, he pointed out, are prepared under the Dominion pure foods act supervision, and are quite dependable in contrast to the dangerous unpasteurized mik for adults and children, healthful or undernourished persons.

Germs in milk that has not been pasteurized, he declared, can lead to such diseases as streptococcic infection of the throat, scarlet fever, typhoid fever, diphtheria, most of the contagious diseases, and even bovine tuberculosis. Dirty, unpasteurized milk, he asserted, was "the most terrific cause" of intestinal and other diseases of infants.

Very few centres forbade the distribution and sale of unpasteurized milk, Dr. Routley lamented, and this was even more serious when it was realized that the diseases carried in unpasteurized milk might attack anybody drinking it.

War Chests Thrown Open to the Needy

Ottawa—The Department of National Defense has been authorized by order in council to throw open its war chests to the Canadian Red Cross Society that the peace forces may benefit.

Here is a gift indeed, for it includes 48,000 pairs of trousers, 42,000 pairs of socks, 22,000 suits of heavy underwear, 24,000 winter undershirts, 18,000 khaki flannel shirts, many thousands of stockings, sweater jackets, overshoes and other useful articles of clothing to the value of $250,000.

These supplies, in stock since the close of the World War in 1918, are in excellent condition. After allowing for the needs of the permanent militia force for the next decade there remains such a "stocking" as enumerated. The department states that "It is considered that in the present circumstances the public welfare will best be served by distributing this clothing to those in need."

11,950 Miles of Roads Maintained in Quebec

Quebec.—The total length of roads maintained this year by the Department of Roads and at the expense of the government was 11,950 miles.

Beginning in 1917, the Department of Roads was authorized by law to maintain the provincial highways and to be regarded by the municipalities as responsible for 50 per cent. of the cost thereof. The law further accorded to the municipalities a subsidy of 50 per cent. up to $400,000 for the maintenance of improved municipal roads. In 1922, the extent of roads in charge of the municipalities having increased considerably, the subsidy maintenance was placed at 50 per cent without limit as to amount.

At the beginning of 1932 the government took over, for maintenance at its own expense, provincial and regional highways. In 1927 it took over for the same purpose all improved roads.

New Air Stamp Very Distinctive

Color of Smaller Denominations Changed to Agree With World Postal Requirements

Ottawa.—A new pictorial issue of Canadian stamps, conceded by philatelists to be of the highest artistic quality, is being sent to post offices throughout the counry by the department.

The most distinctive production of the group, according to departmental officials, is the new five-cent air mail stamp. It bears the figure of the winged mercury against a background of the globe with the North and South American continents delineated. The color is brown. Many expressions of admiration have already been received by the department from stamp collectors, who describe it as the most attractive air mail stamp issued by any country.

Another striking example of the engraver's art is the blue 50-cent stamp which carries a picture of the historic chapel at Grand Pre, N.S., and the well of Evangeline. The one-dollar stamp is dark green and bears a picture of Mount Edith Cavell in British Columbia. A prairie scene is used in the red 20-cent stamp. It shows grain being reaped by modern machinery. In the background are grain elevators. The Quebec Citadel is portrayed on the dark grey 12-cent stamp. The ten-cent stamp, green in color, bears a picture of the parliamentary library.

In the smaller denominations the colors have been changed to agree with international postal conventions, as follows: One-cent, green; two-cent, red; five-cent, blue, and eight-cent, orange. These all bear a portrait of the King.

Underworld Films Banned by Ottawa

Sixty-five Out of 2,022 Hollywood Films Rejected by Censors

Ottawa.—There are too many revolvers in American motion picture films to suit the Ontario Boar dof Censors, which has rejected sixty-five films out of 2,022 submitted because of their excessive gunfire and permitted 486 others to be shown only after deletion or revision.

They lament the prevalence of pictures exploiting crime, gangsters and the underworld because they "offer constructive suggestions to break the law" and "tend to create the impression that such conditions are normal." They are particularly concerned with the promiscuous use of firearms in scenes supposed to portray contemporary domestic life which they find suitable for this country "where the carrying of a weapon is an offence and where confidence in the law is such that the citizen is unarmed."

As a matter of fact, American underworld pictures are not especially popular in Canada, dealing as they do with subjects quite foreign to the experience and interest of most Canadians.

Don't Waste Anti-Freeze

From three to four inches below the top of the overflow pipe is the correct level for keeping the radiator filled with water and radiator glycerine. To be exact, three inches for pump systems and four inches for thermo-siphon systems. The reason for this precaution is that when the solution is warm expansion will cause the level to rise and overflow if the radiator is filled above these points.

Edison Presented With Questionnaire

Declares That Inventions of the Future Will Be In Health Field

New York.—Thomas A. Edison said recently the outstanding inventions of the future will be in the field of health and that inventors will be biologists and chemists.

Mr. Edison replied to a questionnaire from the Review of Reviews. Edison himself is famous for his questionnaires.

"Sickness is pretty hard on the workman now," said the 84-year-old wizard. "It's hard for them to get a good doctor, and proper care is expensive. There is too much sickness. Something will have to be done about it, and that is where biology and chemistry come in."

Here are some of the questions and answers:

Q.—Do you think your work would be easier if you were beginning now—with business ready to give money and facilities for research? A.—Yes, I was for 45 years hustling for payrolls.

Q.—Do inventors come from necessity—"The mother of invention"—or from scientific curiosity? A.—Most inventors work to earn money to get a modest living for their families. All they want is enough money to experiment with.

Deaths Due to Overeating

Q.—Will science tell us to eat less, as it has told us to drink less? A.—Eighty per cent. of our deaths are due to overeating. After the age of 21 a large variety and quantity of food is unnecessary. All those things crowd the stomach and cause poisons. It takes courage to learn restraint, but all that eating is unnecessary. I find that my weight keeps up on a glass of milk alone, every two hours.

Q.—Is there danger that life will grow too complicated, too speedy, with so many new inventions? A.—No. People will live up to it. The brain, if used, has enormous capacity. People don't begin to suspect what the mind is capable of.

Q.——Is there any inherent difficulty in making television as common as the telephone. A.—Yes, cost and complexity. Locomotives are pretty well developed, but you wouldn't want to buy one and have it in your house, would you? Television is like that.

Poison Gas Not So Deadly

Q.—Do you think the auto-gyro is the coming thing in aviation—the best principle so far developed? A.—Yes, and it came from Spain. They say that Spain is dead. But that man (the inventor) has the egg of Columbus.

Q.—Is it your opinion that poison gas in warfare is efficient and merciful, or a horror to be barred? A.—I think it less deadly than bullets and bombs.

On the wall of Mr. Edison's office in West Orange, N.J., where the questionnaire was presented, hangs a quotation from Sir Joshua Reynolds: "There is no expedient to which man will not resort to avoid the real labor of thinking." Pointing to it, Mr. Edison said to his interviewers, "That is what's the matter with us."

Plans to Record Speeches

Berlin——An attempt will be made to get phonographic records of all speeches and interruptions to speeches during the Reichstag sessions of the coming year. If the effort is successful the records will be substituted for the stenographic record of the debates.

Many members of the Reichstag look upon the proposed innovation dubiously, realizing that they will lose the privilege of striking from the official record those of their words which on second thought they deem unsuitable. But others who are not members of the Reichstag favor the plan strongly in the belief that it may bring more dignity and forethought into the debates.

Living Words

Of our great men
Pass not from door to door and out again,
But sit within the house.

France-Italy May Sign Pact

Authority at Rome Says Naval Parity Negotiations Progressing

Rome—Prospects for a naval agreement between France and Italy are "a bit more optimistic than at any time since the London Conference," a foreign office spokesman told a correspondent of the Associated Press here on Dec. 26th.

The present "naval holiday" accepted by the two countries last Summer expires in five days. The Government representative declined to make any statement as to Italy's plans for construction if an agreement is not reached by December 31, but there was a general impression here that the laying down of any ships is unlikely for the time being.

Negotiations between Italy and France, halted several times are again going on and it is considered just possible that they may reach a definite stage by the time of the meeting of the council of the League of Nations January 19.

The recent visit here of Robert L. Craigie, British naval expert and foreign office representative, created a hope of drawing the two countries together along compromise proposals. The present negotiations have not yet reached the stage of actual discussion of the number and tonnage of ships to be allotted each country but in diplomatic circles it is felt that the prospects for an agreement are much brighter than at any time in recent months.

What New York Is Wearing

BY ANNABELLE WORTHINGTON

Illustrated Dressmaking Lesson Furnished With Every Pattern

2703

A swagger frock of wool jersey in fashionable rust-red shade shows interesting buttoned front closing that adds a tailored air.

Just to be different, it gores its circular flaring skirt and attaches it to the hip yoke in deep scalloped outline.

The collar and cuffs are of linen. It's so distinctive and so practical.

It's simple to make.

Style No. 2703 may be had in sizes 8, 10, 12 and 14 years. The 8-year sizes requires 2⅛ yards of 39-inch material with ½ yard of 39-inch contrasting and 2¼ yards of binding.

It is also very smart in lightweight tweed in brown and white diagonal weave, just like the elders are wearing. It may be worn with a brown suede belt. Make the collar and cuffs of white pique with pert bow of brown grosgrain ribbon at neckline. Trim the bodice with brown bone buttons.

Covert cloth, wool crepe, challis prints and tweed-like cottons smart.

HOW TO ORDER PATTERNS.

Write your name and address plainly, giving number and size of such patterns as you want. Enclose 20c in stamps or coin (coin preferred; wrap it carefully) for each number, and address your order to Wilson Pattern Service, 73 West Adelaide St., Toronto.

Italian Birth-Rate Shows Big Increase

Rome, Dec. 26.—For the first time since the world war, a distinct increase had been registered in the number of births in Italy, statistics for the first 10 months of this year showed to-day. The report showed that 907,780 children were born up to the end of October, an increase of 32,548 over the same period a year ago. The deaths for the first 10 months in 1930 in Italy were given as 472,442, a decrease of 94,326 over 1929.

German Railways Face Big Decline

$180,000,000 Decrease in Receipts is Expected at Close of Business Year

Berlin. — The German State Railways, the biggest single commercial undertaking in the world, faces the probability of winding up its business year with more than a $180,000,000 decrease in receipts, according to forecasts from railway officials. This falling off, despite an increase in passenger and freight rates last Summer, is primarily attributed to the general economic depression.

With its 700,000 employees, more than $6,000,000 worth of property and its annual gross receipts of $1,260,,000,000 in 1929 the Reichsbahn not only towers above all privately-owned corporations but leaves its nearest State-owned rival far behind.

Big Drain for Reparations

This giant among monopolies is faced with the primary obligation not of running adequate trains but of producing nearly 250,000,0000 annually to be paid into the Bank for International Settlements against reparations charges. This burden accounts for the somewhat novel organization of the Reichsbahn and explains its tariff policy, its strife with the government regarding these tariffs and the comparatively slow pace in expansion of its plant and in modernization of its equipment.

Fourteen per cent. of all passenger tickets goes for reparations, 21 per cent. of the freight rates and 26 per cent. of baggage and express charges likewise merely pass through the hands of the Reichsbahn. Each month the Reichsbahn must pay to the World Bank 55,000,000 marks and must pay a government transport tax, which is also used for reparations, amounting to 50 per cent. before it can begin taking care of its own debt service charges, 9,000,000 marks annually, or think about dividends.

Replacement Needed in 1924

When the Reichsbahn became a corporation in 1924 it found a great need for replacements in roadbeds, rolling stocks and station equipment which had been neglected during the war and the inflation period. The directors began exercising the German genius for organizing and soon had the waste reduced and efficiency increased to a point where vital improvements could be carried out. Six thousand miles of the total of 33,625 have had new tracks, and normal replacements have been kept up.

Fortunately, owing to the completeness of the system, it has been necessary to add only 500 miles of new line since the war and this was almost entirely small branches. Because of overlapping among several State railways before the war the Reichsbahn found it had more than enough locomotives and was able to reduce by 3,600 to 23,725 and still considers it has 1,400 too many.

New high-powered high-speed passenger locomotives and extra heavy freight engines have been added, but full replacement being unnecessary, it was possible to make considerable savings here. This helped to finance an increase in passenger cars by 1,000 to a total of 65,000 and to drop old types.

Improvements in switching and repair shops enabled the Reichsbahn to get along with 30,000 less freight cars and carry the same amount. The German passenger trains cover 30,000,000 miles yearly against about 40,000,000 covered by United States trains, which, considering the relative size of the countries and the fact that the population is a little less than half as big, indicates a considerably larger service. American freight miles, amounting to 700,000,000 tons, are said to be twelve times as high as the German total. Inland waterways and an elaborate canal system partly account for the difference.

Notwithstanding the scarcity of funds to carry out expansions, railway officials are proud of the safety, regularity and cleanliness of passenger trains, the comfort of sleepers, the menus of dining cars and the increased speed of freight. The Reichsbahn never seems to lose interest in inventions and experiments which promise to improve efficiency, safety and comfort.

Weather Stations To Aid Aviation

Floating Bureaus Essential, Says Air Security Congress at Paris

Paris—Floating meteorological stations are essential to transatlantic air travel, the International Air Security Congress asserted in a resolution here on Dec. 23rd, and, if Government financial support is not made available, such stations should be established by private capital.

The Congress endorsed the Dual-control method of training pilots and advocated a minimum age of 17 years for professional fliers. It also adopted a resolution insisting upon a wider knowledge of everything pertaining to flying as a requisite for professional licenses.

Dirigibles, another resolution said, ought to experiment in landing on water, and the use of helium, "the only gas with absolute aeronautic security," should be advanced wherever.

Farmer's Wife Made $10,000 in Turkeys

Canadian Woman Started Business With Pair of Fowl Won in Raffle

Nine years ago, Mrs. W. A. Freeman, of Ardenode, Alberta, won a pair of bronze turkeys in a raffle. She now has the largest turkey ranch in Canada. Her turkeys will return a revenue of $10,000 this year, says a bulletin of the Dominion Government.

The winning of the pair of turkeys in the raffle suggested to Mrs. Freeman the idea of raising turkeys as a side line. She applied to the Canadian Federal and Alberta Department of Agriculture for literature on raising poultry, turkeys in particular. Her husband, a farmer, encouraged her to experiment in the business. She studied the literature carefully and followed the advice given.

'Her ranch,' says the bulletin, is now famous. She receives letters from all parts of the world and her market extends to all parts of the North American continent and to other countries.

"This year she raised 2,500 birds. Three hundred hens, al' government inspected, have supplied the demand for eggs in 1930 and forty-five of the most perfect hens have been selected for first-class breeding stock. The receipts from the sale of table birds for the holidays are expected to bring the year's total up to $10,000.

"The Freeman farm on which the turkeys are raised has a creek running through it, which supplies a constant and plentiful supply of good water, an essential for successful turkey raising. The soil is sandy, which assures good drainage. Most of the chicks are hatched in incubators. After hatching the chicks are sheltered for about ten days in large coops and then allowed to roam. The main flock is kept on about 300 acres of land, fenced in. Scrupulous attention is paid to the cleanliness of the sheds, roosts, etc., which are sprayed with shingle oil from time to time, to destroy fleas, lice, etc.

Mrs. Freeman believes that any woman on the farm prepared to give the necessary care and attention can meet with an equal measure of success in the business. Next year she plans to raise 5,000 birds for eating and her total revenue will likely be about $15,000.

Airplanes Feed Men on March

Pilots of Royal Air Force Drop Rations by Parachute

London.—Great Britain's increased ability to control India from the air became known here following additional information about recent activities of two squadrons of the Royal Air Force on the northwestern frontier.

The two squadrons fed a column of 1,000 men for two days as the column marched from Dargai, a town north of Peshawar, to Chitral. The planes acted as transport machines in the line of communications, bringing up food from the base. Behind the experiment of rationing this force for two days by use of planes, military men indicated they saw new strength in Britain's machinery for controlling India.

"What's Up With the Weather?" asks a headline. Umbrellas, generally.

Canadian Radio League Established

For Promotion of Canada's Interests in the Radio World

Ottawa, Ont.—Avowing its purpose to be the promotion of Canada's interests in the radio world and the establishment of an organization which might evenually become a medium of expression for those interests, the Canadian Radio League has come into being and assumed definite shape at a meeting here. Temporary chairman of the executive committee is Graham Spry, with Allan Plaunt secretary.

In a memorandum announcing the raison d'etre of the league, its attitude towards national broadcasting is set out in the following terms:

"The solution the radio league sees of the present radio problem, the one means towards making the radio a great instrument of entertainment, education and national unity, is the establishment of a national broadcasting company with the powers of a private enterprise and the functions of a public utility."

A national broadcasting system would ensure, according to the Canadian Radio League, that every Canadian could hear Canadian programs, but not to the exclusion of other broadcasts.

Stone Age Village Found in England

Rye, Sussex, Yields Rich Treasure to Local Archaeologist

London—One of the most complete Stone Age villages discovered in England has just been unearthed near Rye, Sussex, by H. J. Cheney, a local archaeologist. It is believed to be of great importance to the archaeological world because traces of iron working were found. The discovery is expected to shed new light on the habits and industries of Stone Age men.

Ernest Straker and S. E. Winbolt, leading authorities on the Stone Age, contend the relics are undoubtedly of that period. British Museum and other experts are coming to inspect the site.

Mr. Cheney began excavating after noticing that the smoothness of the sky-line at the top of a field was interrupted by an almost imperceptible rising, which suggested a prehistoric tomb. Excavations led to the discoveries. Fragments of oak, believed to be the remains of the wall of a pit dwelling also were found.

Huge Wolf Shot In Milton District

Milton.—Harry Hilson, Sr., a well-known trapper and hunter of Milton Heights, is the possessor of a pelt taken from a female wolf which he shot and killed in the mountain three miles west of Milton. He will apply to the Government for the bounty. This is the first wolf shot in this part of Canada in recent years, and has caused considerable excitement among farmers residing in the district. Several weeks ago Hilson killed a golden-headed eagle near the mountain at Speyside, six miles north of Milton.

Red Men Criticize Fashions Favor Plump Figures in Far North

Vancouver.—The Indian trappers of the Yukon would award no beauty prizes to the slim or even moderately plump women of fashion from other parts of Canada, but rather invite them to the North, where they might acquire figures more rotund.

"What for, all women him so thin outside—no grub? Why he no come in here? Lots of caribou and moose. Him get fat," a red-faced native questioned as he poured over the fashions depicted in a magazine supplied to him by Joe Walsh, veteran Yukoner, who won fame with Pilot E. L. Wasson in the rescue recently of two survivors of the Burke party. (Outside to the native means all country beyond the Yukon).

This is told by Walsh in a letter to his old friend here, Captain George Black. Both are former New Brunswickers who have roamed the Yukon together, and Walsh's letters give little word-pictures and snatches of humor from life there; pictures from the saga of the Burke search; of coal and oil galore on the Arctic slope; of roaming the hills with pick and gun and rod.

Convalescent!

Miss Frances McGaan, Chicago nurse, stricken with infantile paralysis over three months ago, who has been living in "breather", or respirator, since that time, is said by doctors to be on road to recovery.

Pigeons 300 Miles at Sea Land On Fishing Schooner

Storm-Tossed Birds Show Reluctance to Leave When Ship Arrives in Port—Sailors Care For Chance Voyagers

Boston.—Three hundred miles at sea, fifteen pigeons, exhausted and battered in a fight with strong winds, found haven aboard the Boston fishing schooner, L. A. Dunton, which arrived here recently. Chance brought the vessel in the path of the birds, who were borne seaward by offshore winds. The schooner was on the extreme north-east corner of George's Banks. The day was one of the meanest experienced on the fishing grounds this season, Captain Felix Hogan said. Out of a heavy vapor which hung over the water the pigeons were literally hurled on the ship. Some of them struck the rigging and fell exhausted to the deck. Others were blown past turned to make a landing. Members the schooner into the wind and the of the crew tenderly carried them to the engine room, where they were cared for. When the vessel made port Captain Hogan endeavored to set them free. They seemed reluctant to go and were permitted to remain as long as they desired.

TO DAIRYMEN OF EASTERN ONTARIO
BARN MEETINGS AND DEMONSTRATIONS

A series of Barn Meetings and Demonstrations will be held at the undermentioned farms on the dates set opposite.

Friday, Jan. 16—At the farm of Glenn Shaver, Lunenburg, Ont., at 1 p m
Saturday, Jan. 17—At the farm of J. A. Sangster, Lancaster, Ont., 1 p m.
Monday, Jan. 19—At the farm of George M. Rennick, Vankleek Hill, Ont., at 1 p m.
Tuesday, Jan. 20th—At the office of F. C. McRae, Agricultural Representative, Alexandria, Ont., at 1 p. m.
Wednesday, Jan. 21—At the farm of Boyd Johnston, Moose Creek, Ont., at 1 p. m.
Thursday, Jan. 22—At the farm of Murney Empey, Berwick, Ont., 1 p m
Friday, Jan. 23—At the farm of P. A. McGregor, Russell, Ont., at 1 p. m.
Saturday, Jan. 24—At the farm of Floyd Riddell, Mountain, Ont. 1 p. m.

David Hunter, Ayrshire Fieldman, will give lectures on Ayrshire type and the essential points of a dairy cow at each meeting. He will also conduct Judging Classes and Demonstrations. Other speakers will also address each meeting on matters of interest to Dairy Farmers in general.

All dairyman and others interested in cattle, irrespective of whether they are Ayrshire men or not, are cordially invited to be present.

FRANK NAPIER, Secretary-Treasurer.

Canadian Ayrshire Breeders' Association
505 Banque Canadienne Nationale Bldg.,
OTTAWA, ONTARIO.

Town League Openers

The Winchester Hockey League opened its schedule at the local arena on Monday night with two hard fought hockey contests, which produced some very clever hockey and furnished many a thrill. The teams, this year, seemed to be in better shape for the opening games than in former years, and also look as if there is little to choose in the way of superiority, which, when summed up, promises that the majority of games will be hard fought and that new champions will be hard to forecast.

The first game between the Oddfellows and Melvins' Chevrolets started off with a bang. The initial period had only been a few minutes old when Cecil Crowder put the Chevs. one up, and a little later Gord. McDonald made it two It looked bad for the Oddfellows as far as the scores were going, but they pulled themselves together, and in the second period Flora tallied for the Oddfellows. In the final stanza Crowder counted for the Rovers' third goal but the Oddfellows kept pressing and were rewarded with two counters off the sticks of Hec McLean and Cliff. Summers. The game ended a tie, 3-3.

In the second game Bessin's Buzzers went buzzing all around Keyes' Speed boys and the contest was barely a minute old when Laushway, with a perfect exhibition of stick handling, scored for the Buzzers. They kept on forcing the play and before the period ended Hitsman and Kirkwood each netted goals for the Bessin team making the score 3 0.

In the second frame the Speedboys stepped into the fray and had a decided margin over their opponents, outshooting them nearly 3-1. Their efforts were rewarded with two goals tallied by their sharpshooter, Art Summers. Going into the last period with the score 3 2 for the buzzers, both teams started off at a fast clip and play was fairly even throughout. However, Rowat Hunter dented the twine for the buzzers fourth goal and the game ended 4-2 for Bessins.

Both games were refereed by Dan. Preston.

Hockey Protest

The game between Bessin's Buzzers and Keyes' Speedboys, played on Monday night was protested. The protest was lodged by the Speedboys on the grounds that the Buzzers were using a man who was not eligible to play in the Town League.

The protest, among other items of business, was dealt with at a meeting of the Town League Executive on Tuesday night. After considerable discussion, it was pointed out that there had been a misunderstanding and that too much responsibility had been placed on the President's shoulder's, also that no player could be barred without calling a meeting of the executive. However no blame was attached to the league President, as he did what he considered fair to all. The protest was neither granted nor thrown out, but each team was given a point on the game. It was also decided at this meeting that each team carry 10 men and a spare goalie; that Messrs. Laushway and Thompson of South Mountain be allowed to play hockey in the town league; that the Speedboys be granted permission to change a player if they so desired; that the Buzzers be allowed to have another player and that for future years a code of rules be drawn up governing the choosing of players.

Ordination Service

On Monday, Jan. 5th, a council of delegates from the Baptist Churches of Ottawa Association met at Winchester at the call of the Winchester Baptist Church for the purpose of examining, and if found satisfactory, of ordaining Mr. Ulric A. Lanoue, B. A. B.Th., to the Baptist Ministry.

Rev. John Ostrom of Winchester, brought the meeting to order and Mr. Joseph Gemerory, clerk of the Winchester Baptist Church, called the roll. Upon motion of Dr. J. J. McKendry, which was seconded by Mr. J. T Elnaugh, the church accepted the council as named. Following this Rev. R. M. Carkner and Rev. A. Starr McGrath were appointed moderator and clerk, respectively. After Dr J. J. McKendry had introduced the candidate for ordinateon to the Council, Mr. Lanoue proceeded to make his statement concerning his Christion experience, his call to the Ministry, and his views of Christion doctrine. He was carefully questioned by various delegates. The council then adjourned, to closed session and, upon motion of Rev John Ostrom and Rev. H E. Morphy agreed to fellowship Mr. Lanoue on his statement and proceed to ordination. Accordingly a public meeting was called for 7.30 p. m. and R. M. Carkner, Rev L H. Vail and Rev. A. S. McGrath appointed a committee to arrange the order of procedure. At the evening Rev. J. Ostrom aad Rev H. E Morphy conducted the devotional exercises and Mrs. Ostrom contributed a vocal solo. Rev. A. S. McGrath read the minutes of the afternoon activities and Rev. L M. Houlding preadhed the ordination sermon. The ordination prayer was offered by Rev. L. S. Steedman. Rev. R M. Carkner welcomed Mr. Lanoue into the Baptist Ministry and extended fellowship. The charge to the candidate was then delivered by Rev. L. H. Vail and the benediction was pronounced by Rev. U. A. Lanoue. The Winchester United Church extanded a courtesy to the Baptists in giving them the use of their building for the supper hour.

FARMERS ATTENTION!

The 15th Annual Meeting of Cloverdale Farmers' Club will be held in the Council Chambers at Winchester, on Friday, Jan. 16th at 2 p. m. The various Farmers' Clubs in the counties of Carleton Lanark & Dundas seek the attitude of C. F. C. towards the establishing of a new Co-operative Creamery to be located at Smiths' Falls. Farmers of the surrounding district are cordially invited to attend.

H. Stoodley, President.
T. Stobo, Secretary.

The Crown Bakery.

Knut Krust Bread is like the bread mother used to bake. Why should she bake now when she can buy bread more nourishing and better tasting than she has time to make.

Just try a loaf of Knut Krust Bread and be convinced that we are right.
