BUCKINGHAM—FISHER

The United Church, Morrisburg, was the scene of a quiet, but pretty wedding, on Sunday, September 6th at 6 p.m. when Miss Hilda M. Fisher, daughter of Mr. and Mrs. W. J. Fisher of this town, was united in marriage to Mr. William A. Buckngham, son of Mrs. A. Buckingham of Detroit, Rev. E. Lawson officiating.

After the wedding ceremony, the contracting parties, with relatives and friends had lunch at the home of the bride's parents, after which they took the train for Prescott, leaving by boat on Monday morning for Montreal. They returned to Morrisburg Tuesday night and left Thursday morning for their home in Detroit where Mr. Buckingham is employed as receiving teller in the First National Bank.

The bride was the recipient of many beautiful and useful presents at a shower given in her honor by friends on Wednesday evening Sept. 2nd, at the home of Mrs. O. B. Beckstead.

Mr. and Mrs. Buckingham have the well wishes of a host of friends in Morrisburg.

WELCOME NEWS

It will be welcome news to the people of this community who have travelled, and whose cars have been broken over the almost impassable roads along the canal,, to learn that Mr. Aaron Sweet, M.P.P. who has been endeavoring for some time to have this road fiexd up, is now assured by the Minister of Railways and Canals, that the work will be done before the end of this season.

Mr. Sweet's letter, appended speaks for itself:—

Winchester, Sept. 7, 1925.

"The Leader", Morrisburg.
Dear Mr. Laurin

I have been urging the Highways Department for a long time to get those pieces of road along the canal fixed up. I have just received a letter from Hon. G. S. Henry in which he says:—

"We have been discussing with the Department of Railways and Canals, the improvement of the pieces of road you mention. I think I may say, before the end of the season something will be done toward their improvement."

I am sure the people along the river will be glad to see something done in this matter.

Yours sincerely,
Aaron Sweet.

MISS CATHARINE A. BARKLEY

The Angel of Death has again visited Dunbar, claiming as its victim, a very highly respected and esteemed resident in the person of Miss Catharin A. Barkley eldest daughter of the late Mr. and Mrs. Andrew Barkley. Deceased, who always made her home with her sister, Mrs. Samuel Allison, had been confined to her bed for the last six months, and bore her sickness very patiently and all that loving hands could do was done for her was done, but of no avail and she passed away Friday evening.

The service was conducted Sunday September 6th at the family residence by the Rev. Jacobi of Morrisburg choosing as his text, 14th chapter of St. John from 1st to sixth verse, a favorite chapter of the departed, which showed her earnestness and faithfulness to God ,knowing that He doeth all things well.

She leaves to mourn her loss, a kind and loving sister, Mrs. Samuel Allison also one brother Aaron Barkley.

The pall bearers who were nephews of deceased were chosen by her namely: Andrew Allison, Bismark Barkley, Elza Barkley and Laban Barkley. Sincere sympathy is extended to the bereaved family.

MOREWOOD UNITED CHURCH

Messrs Emerson Faulkner and Hector Carruthers, contractors have the new church under rapid construction. The site is located on what was known as the Alex. Mckay estate.

On August 30th, in the evening a last service was held in the former Methodist Church. This service was conducted by the pastor, Rev. R. P. Stafford, B.A., B.D. The church was full the service being very impressive. The minister made it a service of re-consecration of the congregation and building to the new church as the people and the greater part of the material would pass into the new. The old church will be completely demolished in a few days.

Rev. Geo. C. Pidgeon, D.D., is to officiate at the laying of the corner stone, which takes place near the end of September. At presnt the United congregation worship in the Oddfellows' Hall.—Press Com.

ST. JAMES CHURCH

The Archbishop of Nova Scotia Dr. Warrell, who was rector of this church thirty-five years ago, will preach at the morning and evening services on Sunday, Sept. 20th.

THE UNITED CHURCH

Rev. Elwood Lawson, minister.
Sunday Sept. 13th.—

10.30 a.m.—Sacrament of Lord's Supper.

7.00 p.m.—Is Thine Heart Right?

Preparatory service Friday the 11th at 7.30 p.m.

ONTARIO MENACED WITH POWER FAMINE

So rapid an increase has there been in Ontario's consumption of hydro-electric power that Provincial Hydro engineers estimate within four years of the earliest completion of the proposed St. Lawrence River power plants the whole of the output will be absorbed in this Province.

This startling statement, together with interesting statistics as to Ontario's proximity to power exhaustion, is contained in a report just issued by the Provincial Hydro Commission—a report which was prepared for the public in large measure by the late Sir Adam Beck, and which constitutes probably his last official word on Hydro matters. To the great project of St. Lawrence development Sir Adam gave intense study and thought, even throughout his last illness, during which indeed he passed upon its data.

The report embodies the material submitted by the Hydro-Electric Power Commission to the International Joint Commission when the latter body was holding hearings respecting the project at the instance of the Governments of the United States and Canada in 1921. It gives the conclusions arrived at by the Hydro Commission and its engineering consultants as the result of intensive study of the St. Lawrence development.

The Commission had expected the international body to publish the data contained hereunder, but that course not having been taken, adopts this means of getting the information as quickly as possible before the public with a view to securing needed official action.

The documentary character of the report as originally submitted in 1921 is strictly preserved but in the form of specially designated notes, the Hydro-Electric Power Commission supplies the supplementary material which brings its report up to date. Such features as the present status of electrical supply to communities, total investments of the Hydro-Electric utilities, total loads etc., and the relationship of electricity to Canada's fuel problem, are representative of the character of the extra data supplied.

An extensive comment of special interest is added in connection with the discussion of the markets available for the absorptton of the power to be derived from the developments. It will be recalled that Ontario's share of the power is estimated at 800,000 horse power of which under the proposal chiefly favored by the Commission 300,000 horsepower would be the initial development at Morrisburg. The Commission states that, as a result of its further experience of growth of demand in Ontario, it is definitely of the opinion that no power need be sold outside of the Province even temporarily, as all of the power could probably be absorbed in Ontario within four years from the completion of the power plants.

The report explains that in view of the uncertainty of what after-effects might follow the war, the Commission adopted a policy of special conservatism in estimating the growth of load for the purposes of its 1921 report. It points out the rapidity with which the output of the Queenston-Chippawa development has actually been and is being absorbed, and states that the future expansion of the Niagara system will furnish an extensive market for the hydro-electric power available on the St. Lawrence River.

After referring to the unexpectedly high ratio of consumption increase recently experienced, the report says:

"At present the judgment of the Commission is that it will be necessary to provide new sources of electrial power amounting to more than 400 000 horsepower by 1931, which would be increased to over 1,100,000 horsepower by 1936 . . . Viewing the future powen markets in the light of present information, it may be stated that, if authority were immediately granted to develop the international portion of the St. Lawrence the Morrisburg plant would not be ready before 1929, and by that time it is probable that there will be a load to be carried by steam-electric plants aggregating some 250-000 horsepower, necessitating the consumption annually of over half a million tons of coal.

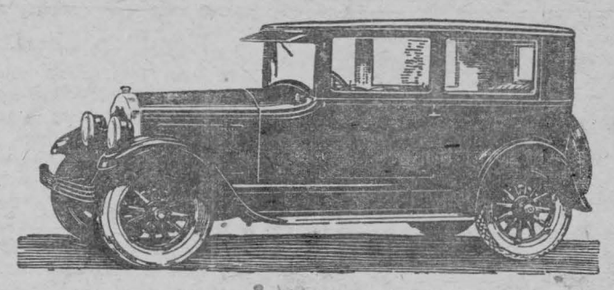
"Under these circumstances—and assuming construction work on the Long Sault development to commence as soon as possible after the Morrisburg development has reached a stage which makes it practicable—the Long Sault development could commence to deliver power by about 1932, and by 1935 or 1936 the whole of Ontario's share of the St. Lawrence River power would probably be absorbed by the Ontario markets alone."

The report describes the three main proposals submitted by the Hydro-Electric Power Commission. They are known as Schemes "A", "B" and "C". All schemes made full provision for navigation improvements. The power development proposals briefly stated, are as follows:

Scheme "A"—known as the single-head development—concentrates the entire available fall in the international reach of the river at the foot of the Long Sault, where the main dams and power houses would be situated, and a normal

(Continued on page 4)

The Success of the Coach as McLAUGHLIN-BUICK Builds It . . . . . .



EVERYONE who has seen the Coach *as McLaughlin-Buick builds it* knows why *this* Coach has received such sweeping public approval.

The McLaughlin-Buick Coach is a real closed car—built to McLaughlin-Buick's high closed-car standards. Fisher body. Graceful lines. Two wide doors enable rear seat passengers to enter or leave either door without disturbing people in front seats. DUCO finish. Different colors for each of two Coach models.

Every detail of McLaughlin-Buick power, comfort, dependability and economy is present in both Master Six and Special Six Coach models. Yet the prices are lower than you'd expect to pay for open cars of such quality.

W. H. Fetterly & Co., - Morrisburg.

How to Fry Steak Deliciously Tender and Juicy

Heat dry clean skillet until piping hot. Wipe meat fat around inside skillet. Place in steak. After one minute turn. Let sear for another moment then fry slowly till done as desired. Place on hot platter, season, spread with butter and serve. The

NESCO PERFECT OIL COOK STOVE

is ideal for steak frying, also for frying fritters, potato chips, doughnuts, breaded sea foods, or waffles. The high, clean, blue, gas flame rising through the grates directly against the utensils, is intense. This solidly-built stove also quickly turns out an ovenful of baking, or heats a wash-boiler of clothes.

THE PLAITED FROCK FOR GIRLS.

Although simple in line, frocks for the miss from four to twelve years boast plaits and hang straight from the shoulders. The plaits, as arranged in the frocks pictured here, form a narrow panel in the front and back of the dress. Small buttons are used effectively to trim the front in View A, and the high neck is fitted with a round collar. The sleeves are long and gathered into a narrow band. In view B, the low neck and centre-front opening are finished with a binding. The short sleeves have a little cuff, and a narrow belt is set under the edge of the plaits at the sides. The diagram shows the simple design of pattern No. 1158, which is in sizes 4, 6, 8, 10 and 12 years. Size 8 years requires 2⅜ yards of 36-inch, or 2¼ yards of 40-inch material. Price 20c.

The designs illustrated in our new Fashion Book are advance styles for the home dressmaker, and the woman or girl who desires to wear garments dependable for taste, simplicity and economy will find her tastes fulfilled in our patterns. Price of the book 10 cents the copy. Each copy includes one coupon good for five cents in the purchase of any pattern.

HOW TO ORDER PATTERNS.

Write your name and address plainly, giving number and size of such patterns as you want. Enclose 20c in stamps or coin (coin preferred; wrap it carefully) for each number, and address your order to Pattern Dept., Wilson Publishing Co., 73 West Adelaide St., Toronto. Patterns sent by return mail.

Marvels of Nature.

A London girl on a visit to the country came to a pond whose shallows were full of tadpoles—thousands and thousands of little black tadpoles flopping about in an inch of mud and water.

"Oh," she said, "look at the tadpoles! And to think that some day every one of the horrid, wriggling things will be a beautiful butterfly."

R125

Non-Stop Lives.

There are twenty-four hours in a day, and the ideal division recommended is—eight hours' work, eight hours sleep, and eight hours' play.

That sounds all right, but, even if it were the established rule, would it not hold the flaw of being a "non-stop" day? If we weren't sleeping we would be working or "playing," and the latter, while it covers and includes all forms of recreation from the very mild to the extremely strenuous, does not provide for a "stop."

It might be argued that lying in a hammock and reclining on a garden sea are "stops.' In one sense yes, in another—the real sense—no. There is a great difference between "resting" and "stopping!"

What you want to do occasionally is to stop and think of yourself. That's called introspection—looking into yourself to see how you are getting on mentally, morally, and spiritually.

All of us can recall the names of financiers who have crashed and ultimately found themselves behind prison walls. Perhaps, if they had "stopped" and taken stock of their inner selves, they might have seen their own moral depreciation and saved themselves from the dock.

"To see ourselves as others see us!" is doubtless a great help, but to see ourselves as we really are is of still greater importance.

That's why we ought to "st'op." The "non-stop" life of work, sleep, pleasure, recreation— the filling of every hour with this, that, or the other interest, is the wrong sort of life.

In the biographies of many of our great men, it is extraordinary how often it is revealed that they "stopped!" Lord Kitchener "stopped" daily to take stock of himself. So did Gladstone.

What about yourself? You cannot know how you—the real you—are getting on, if you don't no wand again stop to look at yourself. If all is well, you go on content; if something is wrong, you put it right.

Kept in Reserve.

Diner—"Your fat proprietor would indicate there's good eating to be had here."

Waiter—"Oh, yes, sir—but we're not serving him to-day."

Human Wireless.

Though he did not know it, through the aeons of man's existence, it was to a "'receiving set"—more complicated and miraculous than that other kind of receiving set—that man owed his precious gift of vision. The eye is a receiving set that works on wave lengths of incredible minuteness, and can instantaneously and automatically "time in" to stations, however near or far.

It is no bigger than a boy's marble. The filmy aerial, though less than a square inch in size, will effectively pick up incoming signals from the nearest object or the most distant star.

Each eye works at one and the same time on hundreds of different wavelengths without undue "jamming." Each has its own telephone exchange with thousands of "land-lines" connecting with the brain.

Ceaselessly, silently and swiftly these receiving sets of Nature work, often sixteen hours a day, year in and year out, with no rest but a momentary wink during their hours of receiving. So it is no wonder that they need occasional repair and tuning up; and, if they are overworked, like all machines they break down.

When this happens the brain gets bad reception, it makes errors of judgment, and it makes miscalculations which may have unhappy results for the individual.

Close Work.

Bill had succeeded in getting a job in a motor factory. He did not even know himself how he got it, for he knew nothing at all about engineering.

On his second day at work he chanced to meet a friend of his who was equally ignorant.

"Hello, Joe!" he said. "How's business?"

"Oh, all right!" was the reply. "How are you getting along with your new job?"

"Great!" said Bill. "But it's terribly close work. Why, do you know, we have to work to a thousandth of an inch."

"Heavens, Bill! How many thousandths are there in an inch?"

"Millions, Joe—millions!"

Keep Minard's Liniment in the house.

Kit Kennedy

BY S. R. CROCKETT.

CHAPTER XXXIX.—(Cont'd.)

The girl clapped her hands.

"Oh, 'Kit'—I like Kit ever so much better than Christopher," she cried. Suddenly she rushed upward and turned sharp to the right.

"Oh, father," she cried, impulsively, "do you know what has happened?"

Kit caught sight of a thick-set man of middle height standing at an open door. He had a nose slightly hooked, prominent bushy eyebrows high in the middle (like a circumflex accent, thought Kit to himself), which gave him a look at once high and irascible. His face was thickly bearded with a short dense beard of the color which the artist calls warm russet and the unthinking red.

The man in the doorway did not answer his daughter directly, but continued to gaze at Kit over her shoulder with an air of stern inquiry.

"The class was late and I must have missed Dick somehow," she went on; "then just at Nicolson Square it was dark, and some nasty fellows spoke rudely to me—or rather would have done, but for this gentleman!"

She turned to Kit with an air of proprietorship.

"This is Mr. Christopher Kennedy," continued the pretty girl, blushing so red that she looked to Kit's eyes more engaging than ever.

The man did not speak, but bent upon Kit a look so searching that the boy felt as if he were entirely transparent to those bold, deep-set eyes.

"I did nothing at all," he faltered. "The fellows ran as soon as they saw me. Besides, there was a policeman coming, anyway!"

Kit was blushing in his turn.

"Will you come in, sir?" said the russet-bearded man, in no wise abating the severity of his glance. He had a deep voice, and as Kit passed him he noticed his enormous spread of chest—almost disproportionate, indeed, to his height.

Kit took off his hat and passed within. It was a simple kitchen that he was ushered into. A stout, matronly woman was bustling about a range, which shone in all its parts with winking brass and the polish of infinite black lead.

"Mother," said the man, "here is a neighbor of ours who has brought Mary home."

The woman turned upon Kit with a pleasant smile and held out her hand.

"Ye are welcome," she said. "What has come over that 'seefer' Dick that he didna meet ye, Mary?"

The pretty girl stood in the middle of the floor and explained. She drew one glove after the other slowly and daintily off. Kit could not help looking at her, though the action was clearly unconscious. He wanted to tell her that it was even prettier to watch her take off her gloves than to put them on.

"And, mother," she cried, for she had an impulsive way with her wholly unknown to Galloway, "if it had not been for Mr. Kennedy, I do not know what I should have done."

Whereupon the tale of Kit's heroism was again retold and again disclaimed, till that youth of parts was all quivering with excitement and throbbing with vague happiness. He seemed to be setting his foot on the very threshold of the unknown. He began to sympathize all at once with Rob Armour and the two foresters who waited about the cottage gate to see Betty. Hitherto he had always agreed with Betty that it was very good fun.

But he was learning the other side of it while he stood fingering the brim of his hat and watching the pretty girl drawing off her gloves so daintily that Kit dared hardly shake her by the hand, lest something so delicate should break in the stiff awkwardness of his countryman's fingers.

"Will ye no sit ye doon?" said the good wife of the house with cordial invitation. She was getting supper ready, and, though naturally heavy-footed, she wore such soft slippers and walked so springily that she seemed to be in three places at once. The girl took off her hat and went forward to help her mother. But the elder woman pushed her from the fire.

"Gang awa' and sit doon. Rest ye, lassie. Ye hae been a' day among the bairns in the schule, and then at the night-schule as well. Your mither has dune naething but plowter about the hoose."

"But, mother," said the girl, "I am not tired."

And to show how fresh she was, the young girl began to take crockery from a wall-press and spread it out upon the white cloth which was already laid. It was pretty to watch her. She was so graceful, so innocent, and so impulsive.

"I must be getting upstairs to my work!" said Kit, a little mournfully. It would not be half so much fun to sit and listen to the scrape of Bob Grier's pen doing his Latin version.

"We are just going to have tea," said the taciturn man, thawing a little; "will you stay and drink a cup with us?"

Kit sat down, still, however, keeping his hat in his hands.

The pretty girl came and took it away, smiling at him as she did so.

"Poor thing!" she said; "don't turn it round and round like that all the time. You will make it dizzy."

She disclosed a row of sparklingly white and even teeth as she spoke. And Kit thought that he had never listened to so witty a remark. Then, when the table was set, she went and looked over her fathers head at the visitor, resting her elbows on the broad shoulder and dinting her chin into his thick scrubby bush of grey hair.

She was a very pretty girl. Her features were delicate and regular, save for the slightest aspiration on the part of her nose, which was set at a most provocative angle. Her eyes were a kind of blue, yet never stayed the same for two seconds. She had brownish hair with golden lights in it, and a dimple played bo-peep at the right corner of her mouth each time she laughed.

She was not tall, but so slender that when no one stood beside her she gave the effect of being so.

Kit did not know what there was about this girl, of whose very name he was still ignorant, that made him think of all the beautiful things he had ever seen. Did she bend coquettishly down to her father so that the firelight was reflected in her hair, till the brown turned into red and the bronze to golden yellow—instantly Kit saw the Crae Hill sweeping back in stretch after stretch of red heather. It was mornings prime, and the sun was rising. Moor-cocks were crawing in the hollows, and the great gladsome day stood on tiptoe.

Or, she shook back her loosely clustering hair from her brow. The lights wavered across it from fire and lamp, and instantly Kit saw the thirty-acre field at the Dornal all awave with ripening corn. The wind came lightly from the west and drove it towards him in glinting swells. That was the most beautiful thing he had seen till he had met this girl of the city under the November street lamps.

Happily on this first visit Kit did not need to speak much. The women talked both for him and to him, while occasionally the thick-set saturnine man put in a word.

Kit found himself at liberty to sit and look where he would. And the stern-eyed man watched the direction of his eyes.

Then they drew in to the plain deal table on which a fair and fine cloth had been laid. Kit made a pretence of eating, but he was not hungry. It seemed a profanation to eat in such a dainty presence; or, if not exactly profane, at least ill-judged and vulgar.

But the pretty girl herself had no such qualms. She was frankly hungry, and said so. So that it was not long before Kit observed with surprise that those white and even teeth were capable of being used for other purposes than suddenly aiding and abetting her eyes to break into a dazzling smile, like the sun peering through a tearful April sky. All healthy pretty girls must, as a condition of their beauty, eat well, and this one freely owned the necessity.

"I am a perfect piggie about supper," she confessed with frank unconcern; "I have it in my mind all day at school when I am drilling the infant class. I never think about anything else coming home, and then when I do get home I always look in the oven the first thing to see what there is."

At this moment a tall loosely-built lad, with short red hair, a weak mouth, and a freckled face came in. He wore a cutaway coat of smartish fashion and held a thin cane in his hand.

"Why, Dick!" cried the girl, rising to give him an impulsive kiss, to which he submitted rather than responded, "where have you been? I missed you, and if it had not been for this gentleman"—here she smiled at Kit, making his heart quiver strangely (again he saw the Crae hillside and the sunshine fleeting across it)—"I don't know what I should have done."

The stern-faced man continued to watch the youth, who did not seem to look at any one in particular, and who markedly avoided Kit's eye.

"I was out with Marmy," he said; "we went further than we intended, and I did not get back to the school in time. It's all nonsense about any one molesting you, Mary. You are always so nervous. It is very silly."

"Dick," said his father, "take your supper and go to bed!"

The youth laid down his cane, put his hat carefully on a peg in the hall, and sat down at the table without giving Kit a glance.

The supper proceeded, but with something less of enthusiasm.

"You have not been long in the city, sir?" said the elder man, suddenly unbending and looking over at Kit with a friendliness in his eyes as sudden as it was unexpected.

How it happened Kit did not know, but a moment afterwards he found himself in the midst of a full account of his life. He began by telling of his grandfather, of his grandmother, something even of his mother. He told of the Mac Walters of Loch Spellanderie. He entered into full particulars concerning Betty and the three foresters.

"I think she was a very cruel girl!" interjected the one at the table most able to criticize Betty's actions and motives.

From being silent Kit grew voluble, from the extreme of reticence he became almost confidential. And as he talked of the "Orra Man" his halting tongue grew oratory and the color mounted to his cheek. While he talked he continued to look at the pretty girl, who blushed with contagious enthusiasm. But it was to the stern man that he spoke directly, and after a time he nodded quietly.

Suddenly, while Kit was speaking, the young man who had been called Dick pushed back his chair from the table, and, brushing the crumbs from his coat, he tramped noisily out and began to ascend the stair.

"Dick!" said his father, in deep, quiet tones.

The feet tramped on.

"DICK!"

The feet stopped on the landing. There was a moment's silence which somehow weighed upon all as though heavy with fate. The pretty girl's face lost its bright expression. It seemed to grow anxious, and she was obviously not listening to what Kit said.

The footsteps began slowly to descend. The head of the youth, more vapid and watery-eyed than before, was thrust within the kitchen.

"What do you want, father?" he said.

The stern man did not answer in words. He only indicated the chair from which Dick had risen with a slight nod of his head.

Dick sat down.

"And now, you were telling us——" the face of the russet-bearded man was turned to Kit with the same unexpected smile of grave sweetness.

But the heart had gone out of the tale. Kit's glow of communicativeness had sunk like a blaze among whins.

"Must you go?" murmured the pretty girl, a little sadly. Kit liked the way she said that. He lay awake two hours trying to recall her exact manner of saying it.

"And be sure ye dinna gang by the door withoot lookin' in," said the motherly person at the foot of the table. "We hae aye supper aboot this time, and ye are welcome."

"I shall be glad to see you!" said the grave man, reaching out a hand.

"Good-night," said Kit, to the young man in the cutaway coat.

His father's eye was upon him, and he managed to emit a grunt which, on a liberal interpretation might have been construed as an acknowledgment of Kit's salutation.

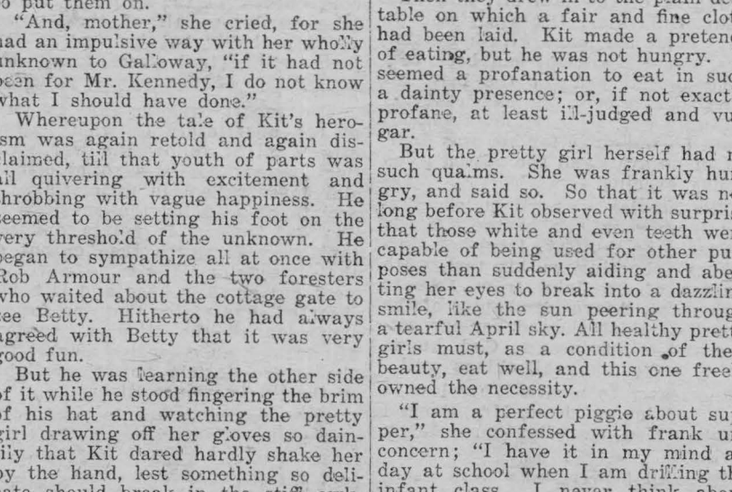
The pretty girl went with Kit to the door.

"You were very kind," she said, "we are all very—that is, we hope you will come back."

"You have not yet told me your name," said Kit, holding her hand till she should answer.

"Mary Bisset is my name!" she said, with a grave sweetness very like her father's.

(To be continued.)



Capt. Malcolm Campbell, English speed king, at the wheel of 12 cylinder Sunbeam in which he averaged 150.766 miles per hour, a new world's record.

A Moral Rebuke.

GREAT U.S. DIRIGIBLE CRASHES AND 14 OF CREW ARE KILLED

Naval Airship Shenandoah is Rent Apart by Fierce Electrical Storm During Flight and Falls From Altitude of 7,500 Feet.

Caldwell, Ohio, Sept. 3.—Fourteen of the crew of the Shenandoah, giant dirigible, are dead and two others were seriously injured when the pride of the United States Navy cracked during a severe storm, on its western cruise from its Lakehurst, N.J., airport.

Among the dead is Lieutenant-Commander Zachary Lansdowne, Captain of the ship.

After battling the elements for several hours, the huge aircraft suddenly shot upward to an altitude of approximately 7,500 feet from a 3,000 foot level, where the dirigible buckled amidships. The pressure and twisting were so great that the ship broke in three sections.

The control cabin, swung beneath the foresection of the ship proper, broke away and crashed to the ground while at an altitude of several thousand feet. It carried most of the crew who were killed.

Released of the control cabin, the foresection, measuring about 150 feet and bearing seven survivors, free-ballooned for more than an hour, and finally was landed near Sharon, twelve miles from where the control cabin crashed, near Ava.

The main section, carrying 26 survivors, landed with a crash which sent several of the crew diving through the outer covering to the ground. A middle section of some 15 or 20 feet settled down in pieces over the countryside.

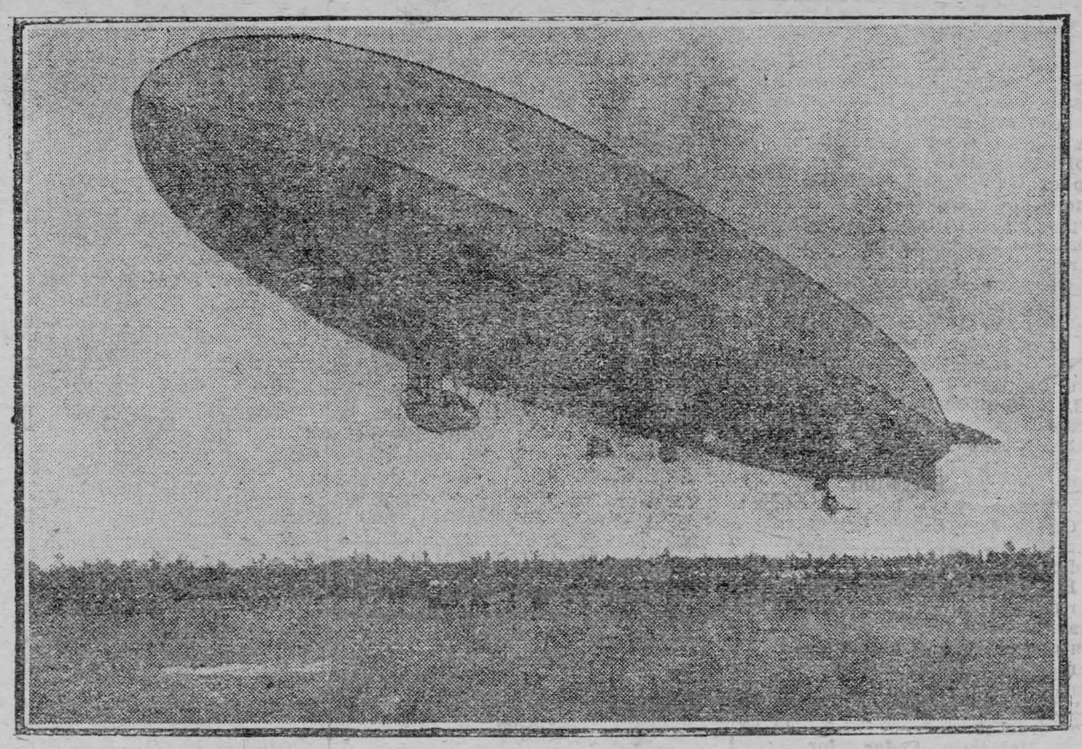
Those aboard the nose section had a wild and thrilling ride, and landed twelve miles from the place where the cabin compartment crashed. Several of the officers had just left the control cabin, and were climbing up the ladder into the catwalk of the ship proper when the cabin broke loose.

Suspended in midair, and hanging to a girder, they crawled or were pulled to places of comparative safety.

One, not so fortunate, F. J. McCarthy, chief rigger, was swept from his perilous perch in the forward end of the nose to the ground, where the motorless craft struck a tree. He is in a Marietta hospital in a serious condition.

With three men forward and three aft in the nose of the craft, it was manoeuvred to a safe altitude after brushing trees and at least one farmhouse. Lieutenant- Commander C. E. Rosendahl and Lieutenant J. B. Anderson directed the release of the helium gas and gasoline in such a way that the nose landed without severely injuring any aboard.

TITAN OF AIR CARRIES MANY TO DEATH



SHENANDOAH IS SHATTERED AND FOURTEEN OF CREW KILLED

IMMIGRANTS MOSTLY OF THE FARM CLASS

While Totals Are Disappointing Statistics Show 65 Per Cent. Agriculturists.

A despatch from Ottawa says:—A steady increase in the proportion of agricultural classes to the total immigration is one of the important results of the efforts of the Dept. of Immigration and Colonization during the last three years and will be shown in the complete figures for the first quarter of the present fiscal year—April, May and June—to be issued shortly.

Immigrants in the agricultural and domestic servant classes during April, May and June in the year 1923 were 46 per cent. of the whole immigration; in 1924 they were 53 per cent., and in the same three months of the present year 63 per cent. of the total immigration, while of the total immigration through ocean ports and excluding incoming farmers from the United States, the percentage of agricultural and domestic servant classes in April, May and June of 1923 was 46 per cent.; 54 per cent. in 1924, and 65 per cent. in the same period this year. In the whole year of 1913, the last full year before the war, the percentage was only 30 per cent. of the total.

In numbers the immigration into Canada in the first three months of the present fiscal year is disappointing, the total being about 33,000, as compared with 47,813 in the same period last year.

As for immigration from the British Isles, every possible encouragement has been given, and since inspection was undertaken seriously the regulations have never been easier for people to come to Canada from the Mother Country. The conditions imposed upon them are: Good health, good character, no passport, no guarantee of employment; no stated money requirement, but sufficient to enable them to join their friends here or find a job.

Linked up with the higher cost of transportation, the reason given for the drop in immigration from Great Britain under the Empire scheme is that the families otherwise qualified have not the requisite money. For an average family, about $500 is necessary to get out here and settle on the land, but the number able to spend that amount is small. For a family of five, the $500 would be used up in transportation costs alone.

Sir Henry Maybury, English traffic expert, who has come to this continent to study traffic control.

Turkish Police Must Bob Hair and Shave Long Beards

A despatch from Constantinople says:—Innovation after innovation follows the trend of the times in new Turkey. By order of the Prefect the picturesque night watchmen of Constantinople must shave off their flowing beards and crop their long hair. Also they must replace their varicolored turbans and scarfs and baggy trousers with a uniform resembling that of the regular police.

No longer are the wakeful inhabitants of the city to hear the reassuring beat of their long iron-tipped sticks on the cobblestones or thieves make their escape, thanks to the warning tap-tap-tap. The sticks of the watchmen have been confiscated and the policeman's billy, less attractive but of more practical value, is to be carried instead.

Heretofore the watchmen or "bikdjis," as they are called, have collected gratuities from householders on their beats instead of receiving regular wages. Now the municipal government will exact from each family, in proportion to its financial capacity, a sum to be paid them as a regular wage.

King George Bags More Grouse Than His Guests

A despatch from London says:—King George, who is now taking his annual holiday in Scotland—the only real vacation from his job that he ever gets—has blossomed forth as one of the best shots in his kingdom. His bag of grouse on the great royal estates in the region of Balmoral Castle has been better this summer than those of most of his guests or of the old-time sportsmen who spend the year round in that vicinity.

Not only ha the King acquired the reputation of being a sure shot, but his companions have noticed that he always takes the most difficult birds and rarely misses, and that he seldom merely wings his game, but usually registers a deadly hit.

The King does not believe in the easy shooting in vogue in some districts, and the system used on his estates is calculated to give the birds the best chance.

King Victor Reviews Italian Navy of Three Hundred

A despatch from Syracuse, Sicily, says:—An imposing array of 300 fighting ships of all types and tonnages, comprising the entire naval force of Italy, steamed majestically through the glistening azure waters of the Ionian seat at Cape Lurrodi Poroc, passing in review before King Victor Emmanuel, Crown Prince Humbert and Admiral Acton, chief of staff of the Italian Navy, who looked on from the deck of the Royal Yacht Savoia.

Soon after dawn all the ships which had participated in the manoeuvres of the last week in Sardinian and Sicilian waters were drawn up off Syracuse. Then for two hours an impressive double line of war craft passed before the King, with the dreadnaughts Conti di Cavour, Dante Alighieri, Andrea Doria and Giulio Cesare heading the procession.

Flanking these giants came a lighter division of cruisers, followed by dozens of destroyers and vessels of other types. A flock of fast motor boats preceeded the submarines, which steamed low in the water with officers in their turrets. Mine sweepers brought up the rear.

September Heat Record Broken in Western Canada

A despatch from Winnipeg says:—All records for September heat were broken in Winnipeg on Sept. 2, when thermometers stood at 92. The previous high record made was Sept. 1, 1923, when the mercury rose to 87. Reports were that the heat wave was general over the Prairie Provinces.

Farther west the mercury hovered around the 90 mark, with Foremost, near Lethbridge, Alta., scoring the highest at 93.

CANADIAN LOSES LIFE IN CAUSE OF SCIENCE

Geologist of Manitoba University Led Expedition to East Africa.

A despatch from London says:—W. E. Cutler, leader of the British Museum expedition in East Africa, died from malaria, according to reports just received here.

The Cutler party, since May, 1924, has been excavating on an extensive scale dinosaurian remains at Tendaguru, about forty miles from Lindi, in the district of Tanganyika.

The British Museum in the last few months has received a large quantity of specimens from Mr. Cutler, whose last letter announced that possibly he would be sending twenty-six cases, in addition to what he had already sent. The letter stated that, besides the expected twenty-six cases, the Cutler expedition had unearthed enough specimens of dinosaurian remains to fill another seventy or eighty boxes.

A despatch from Winnipeg says:—Professor Cutler, assistant in the Department of Geology of the University of Manitoba, left Winnipeg Jan. 30, 1924, to head the British Museum's party of explorers to Africa.

The primary object of the project was to obtain the bones of a dinosaurian reptile of stupendous size which was discovered by German scientists a few years before the war. When Prof. Cutler arrived in Tanganyika he found the skeleton to be of colossal dimensions—the largest ever discovered in the history of modern science.

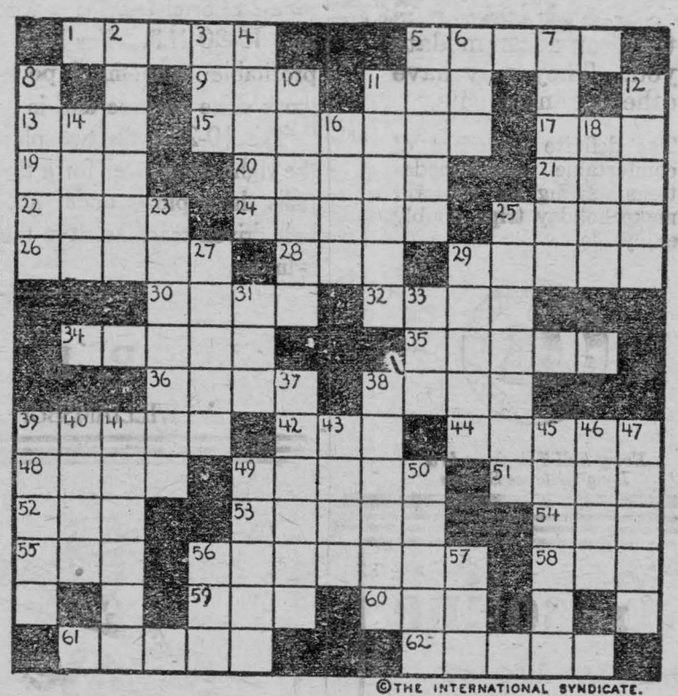
In a report which he sent to Museum authorities, he estimated it to be twice the length of the "Doploducus" now in the Reptile Room of the historic British institution.

British Teachers Keep Pupils From U.S. Films

A despatch from Toronto says:—Teachers in Great Britain are trying to keep their pupils from attending motion picture shows where American films are shown, as this "form of American propaganda is having its effect on English boys and girls," Mrs. Elizabeth Ord-Marshall, secretary of the League of the Empire, said here recently.

Mrs. Ord-Marshall advocated establishment of an Empire-wide British film industry that would "uphold all British ideals" and cement the empire more strongly together. She is in charge of a party of English teachers touring Canada.

CROSS-WORD PUZZLE



©THE INTERNATIONAL SYNDICATE.

SUGGESTIONS FOR SOLVING CROSS-WORD PUZZLES

Start out by filling in the words of which you feel reasonably sure. These will give you a clue to other words crossing them, and they in turn to still others. A letter belongs in each white space, words starting at the numbered squares and running either horizontally or vertically or both.

HORIZONTAL

1—A necktie
5—To nip
9—An obstruction
11—To demand payment
13—To fortify
15—Obliterating implements
17—To be under obligation
19—A dandy
20—Penetrate
21—An oath
22—Informed
24—Measures
25—Simple
26—Horse
28—Female sheep
29—Underground worker
30—To make insipid
32—Midday
34—Minute organism
35—Twisted
36—To filter through
38—Bitter plum
39—Runs away
42—One length of a course
44—Long, narrow piece
48—To tear
49—To drive oakum into seams
51—Mentally sound
52—Finish
53—Big steamship
54—To refrigerate
55—Eroded
56—Like milk
58—To weaken
59—To imitate
60—Negative
61—Quarrels
62—Inclined

VERTICAL

2—Specimen
3—Poem
4—Allowance in weight (pl.)
5—Utters low murmuring sounds
6—Inspector (abbr.)
7—Divided
8—Floating structures
10—Shelf
11—To make more profound
12—A duct
14—Basis
16—To cook in liquid
18—Carried as bodily covering
23—Ousted
25—Old-time dance (pl.)
27—Ventures
29—Philippine natives
31—Protected side
33—Night bird
37—A fish
38—Ill temper
39—Something abnormal
40—Religious period
41—To make beloved
43—Relative
45—Dried grape
46—Ancient Peruvian ruler
47—Looks slyly
49—Sudden, sharp noise (pl.)
50—African cattle-pen
56—To place
57—Alkaline solution

MAKE ESCAPE THROUGH HOLE CUT IN WALL

Two Captives Aided by Friends Elude Guards at Carleton Jail.

A despatch from Ottawa says:—Assisted by friends from the outside, who cut a hole in the two-foot wall of the Carleton County Jail yard, two prisoners, Fred Zavelitch, aged 17, of Eastview, Ont., and Ernest Dupuis, aged 32, of Hull, Que., made a successful getaway from the jail in broad daylight. No trace of them has yet been found. Jail Governor A. Dawson, in a statement, intimates that in his opinion the men who made their escape were not the men for whom elaborate preparations had been made. Zavelitch and Dupuis were only serving short sentences for minor crimes, while a number of prisoners, some of international repute, are awaiting trial on more serious charges.

The hole cut in the wall was partly concealed by the stone pile and had apparently been made by someone from the outside with experience in masonry. A small stick was later found protruding from the top of the wall, apparently indicating to the prisoners the position of the hole. The outside of the wall faces a deserted alleyway and tracks of a motor car indicate that the men were whisked away immediately they made their break for liberty by a waiting car. The noise of the prisoners on the stone pile drowned out all noises made by the rescue party.

The getaway was not noticed until the guard on duty in the court-yard, superintending the stone-breaking, made his usual count of prisoners at 3.30. Finding two prisoners missing, he immediately herded the remainder inside the jail building and reported the escape.

HOHENZOLLERNS TO RECOVER $50,000,000

Property Confiscated at Revolution Returned by Order of the State.

A despatch from Berlin says:—Property valued by some experts at $50,000,000 will be turned over to the former Kaiser and various members of his family by the Prussian State as a result of an agreement reported to have been reached between the state and the Hohenzollern family.

The reported agreement followed numerous legal actions brought by the Hohenzollerns, in all of which the courts declared in favor of the imperial family, and prolonged negotiations between state officials and the ex-Kaiser's representatives.

The property includes large landed estates, forest domains, castles, palaces and mansions, and valuable art collections, all of which were confiscated by the Prussian Government at the outbreak of the revolution. The state is said to have been compelled to reach a compromise with the Hohenzollerns in order to avoid additional heavy expenses fighting the almost hopeless court actions brought by the Hohenzollerns.

The courts are controlled almost entirely by the monarchists, and almost invariably have shown themselves to be on the side of the ex-Kaiser and his family. Any agreement between the state and the Hohenzollerns will have to be ratified by the Prussian Diet.

Ireland's Fruit Crop a Failure.

The fruit crop this year has proved almost a complete failure, the Free State Department of Agriculture reports. The yield is the smallest in many years, says a Dublin despatch.

In the Rockall depression, some 100 miles northwest of Ireland and Scotland, the Atlantic is about 8,000 feet deep, or a little over 1½ miles, whilst in the North Pacific Ocean there is the Great Ocean Chasm, which is six miles deep.

THE MARKETS

TORONTO.

Man. wheat—No. 1 North., $1.49¼; No. 2 North., $1.47¼; No. 3 North., $1.45¼; No. 4 wheat, not quoted.

Man. oats—No. 2 CW., 53c; No. 3 CW., 47c; No. 1 feed, 45c.

All the above in store Ft. William.

Am. corn, track, Toronto—No. 2 yellow, $1.10.

Millfeed—Del., Montreal freights, bags included. Bran, per ton, $28; shorts, per ton, $30; middlings, $36; good feed flour, per bag, $2.30.

Ont. oats—36 to 40c, f.o.b. shipping points.

Ont. good milling wheat—$1.25 to $1.28, f.o.b. shipping points, according to freights.

Barley—Malting, 71c.

Buckwheat—No. 3, nominal.

Rye—No. 2, nominal.

Man. flour, first pat., $9.30, Toronto; do, second pat., $8.80, Toronto. Pastry flour, bags, $6.30.

Ont. flour—Toronto, 90 per cent. pats., per barrel, in carlots, Toronto, $6.10; seaboard, in bulk, $6.10.

Straw—Carlots, per ton, $8 to $8.50.

Screenings—Standard, recleaned, f.o.b. bay ports, per ton, $18 to $20.

Hay—No. 2, per ton, $15; No. 3, per ton, $11 to $12; mixed, per ton, $9 to $11; lower grades, $6 to $9.

Cheese—New, large, 24 to 24½c; twins, 24½ to 25c; triplets, 25 to 25½c; Stiltons, 26 to 27c. Old, large, 30c; twins, 30½c; triplets, 31c.

Butter—Finest creamery prints, 41½c; No. 1 creamery, 40½c; No. 2, 38 to 38½c. Dairy prints, 28½ to 30½c.

Eggs—Fresh extras, in cartons, 41 to 42c; loose, 39 to 40c; fresh firsts, 36 to 37c; seconds, 32 to 33c.

Dressed poultry—Chickens, spring, lb., 30 to 35c; hens, over 4 to 5 lbs., 24 to 28c; do, 3 to 4 lbs., 22c; roosters, 18c; ducklings, 5 lbs. and up, 27 to 30c.

Beans—Can., handpicked, lb., 6½c; primes, 6c.

Maple produce—Syrup, per imp. gal., $2.40; per 5-gal. tin, $2.30 per gal.; maple sugar, lb., 25 to 26c.

Honey—60-lb. tins, 13½c per lb.; 10-lb. tins, 13½c; 5-lb. tins, 14c; 2½-lb. tins, 15½ to 16c.

Smoked meats—Hams, med., 32 to 33c; cooked hams, 47 to 50c; smoked rolls, 22c; cottage, 23 to 25c; breakfast bacon, 32 to 36c; special brand breakfast bacon, 38 to 39c; backs, boneless, 36 to 42c.

Cured meats—Long clear bacon, 50 to 70 lbs., $22 ; 70 to 90 lbs., $20.50; 20 lbs. and up, $19.50; lightweight rolls in barrels, $43.50; heavyweight rolls, $39.50 per barrel.

Lard—Pure tierces, 18 to 18½c; tubs, 18½ to 19c; pails, 19 to 19½c; prints, 20 to 20½c; shortening, tierces, 14c; tubs, 14½c; pails, 15c; blocks, 16c.

Heavy steers, choice, $8 to $8.45; do, good, $7.50 to $7.75; butcher steers, choice, $7.25 to $8; do, good, $6.25 to $7; do, med., $5.25 to $6; do, com., $4.50 to $5.25; butcher heifers, choice, $6.75 to $7.25; do, good, $5.75 to $6.25; do, med., $5 to $5.50; do, com., $3 to $5; butcher cows, choice $4.50 to $5.25; do, fair to good, $4 to $4.50; canners and cutters, $1.50 to $3; butcher bulls, good, $4.50 to $5.25; do, fair, $3.75 to $4; bologna, $3 to $3.50; feeding steers, good, $6 to $6.25; do, fair, $4.50 to $5.25; calves, choice, $11.50 to $12; do, med., $9.50 to $10; do, com., $4.50 to $5.50; milch cows, choice, $70 to $80; do, fair, $40 to $50; springers, choice, $80 to $95; good light sheep, $7 to $8; heavies and bucks, $5 to $6; good lambs, $13 to $13.25; do, med., $12.75 to $13; do, bucks, $11 to $11.25; do, culls, $10 to $11; hogs, thick smooth, fed and watered, $13.60; do, f.o.b., $13; do, country points, $12.75; do, off cars, $14; select premium, $2.66.

MONTREAL.

Oats, No. 2 CW, 64c; No. 3 CW, 59c; extra No. 1 feed, 59c. Flour, Man. spring wheat pats., firsts $9; seconds, $8.50; strong bakers', $8.30; winter pats., choice, $6.70 to $6.90. Rolled oats, bag, 90 lbs., $3.65 to $3.75. Bran, $28.25. Shorts, $30.25. Middlings, $36.25. Hay, No. 2, per ton, car lots, $14.

Cheese, finest westerns, 22⅜ to 22½c; finest easterns, 22 to 22⅛c. Butter, No. 1 pasteurized, 39 to 39¼c; No. 1 creamery, 38 to 38¼c; seconds, 37 to 37¼c. Eggs, fresh extras, 41c; fresh firsts, 38c.

Calves, $8.50; veals, good grassers, $5; hogs, mixed lots, $14.25; good lambs, $12.25.

Travels 13,000 Miles to Tell of Slaying of His Comrade

W. O. Clark, of Dunedin, New Zealand, arrived in London recently after traveling 13,000 miles to tell the story of the murder of a comrade, which he witnessed in Cologne in 1919.

"The New Zealand Government," he told a "Daily Mail" reporter, "has sent me to give evidence about the death of Private Cromar, of the Otago Regiment, New Zealand, whom I saw shot dead on February 7, 1919. I expect to go to Cologne in a few days' time."

At the beginning of the Allied occupation on the Rhine a band of German youths swore to cut off the hair of all girls who fraternized with members of the army of occupation. On the day he met his death Private Cromar talked with a girl who was sitting on the same bench in a park.

Answer to last week's puzzle:

ONTARIO MENACED WITH POWER FAMINE

(Continued from page 1.)

working head of about 74 feet be obtained.

Scheme "B"—known as the two-stage development--concentrates the available fall at two points, one in the vicinity of Morrisburg, where a head of 27 feet would be utilized and one, as in Scheme "A", at the foot of the Long Sault, where a head of 54 feet would be developed.

Scheme "C" is also a two-stage development similar to Scheme "B" but with the upper dam and power house located at Crysler Island.

The complete plans filed by the Commission are reproduced in their original colors, and show in great detail the engineering and other features of the proposals. With its comprehensive index and extensive footnotes the volume constitutes a full presentation of the Commissions position with respect to the St. Lawrence development.

It may be recalled that on the last occasion when Sir Adam Beck spoke in public he took the opportunity again to impress upon his audience the paramount importance of doing everything possible to expedite the development of the St. Lawrence and the prime importance of these water powers to Ontario's future growth and welfare. On that occasion Sir Adam Beck said:

"I regret to tell you . . . that we are faced with the necessity of using auxiliary steam plants while millions of horsepower are running to waste down the St. Lawrence."

And, again, in what was practically his last public utterance—his letter read at the annual summer meeting of the Ontario Municipal Electrical Association and the Association of Municipal Electrical Utilites—Sr Adam Beck said:

"It is unnecessary for me to emphasize to the members of your association the vital importance of developing, as required, hydro-electrical energy from the remaining water powers available in the Province of Ontario so that this energy may be available to supply the municipal domestic, commercial and industrial requirements of Ontario municipalites. . . .

"Every possible effort has been made to obtain from the Federal Government the authority necessary to enable the Hydro-Electric Power Commission to proceed with the development of power on the upper portion of the St. Lawrence River. Our hopes in this respect have been disappointed. The desired authority has not been granted."

"In fact," stated Commissioner Cooke, "during recent years on practically every occasion that Sir Adam Beck made a public address he emphasized the importance of the St. Lawrence development, and all through his illness he spent a great deal of his time in planning and devising possible ways for securing an early development of Ontario's share of the water powers of the St. Lawrence. It is believed," added Mr. Cooke "that the report now issued will substantially contribute to the attainment of this very desirable goal."

FORMAL OPENING OF HIGHWAYS

The completion of the paving work on Gananoque's main thorough fare forms an important link in the Windsor to Quebec provincial highway and it has been deemed worthy by Mayor Wilson and the Council of that town, of a fitting celebration.

In determining a date for the event the Mayor has been influenced by the convenience of some of those whom he most desires to be present to grace the occasion. After considerable correspondence he has fixed upon Friday Sept. 18th, and is now busily engaged in working out a suitable programme.

Among the more distinguished men to whom invitations are being sent, and some of whom have already accepted, are the Lieut. Governor of Ontario the Governor of New York State, and the Premiers of Ontario and Quebec. The Mayors Town Clerks, Board of Trade Presidents, Motor League Presidents and newspaper men of all the towns on the highway between Toronto and the Quebec line and all the towns contiguous to the river in New York State, will also be officially invited and it s expected a great many will accept. The invitations will include a complimentary dinner to be tendered to all guests by the Canadian Club.

The location of Gananoque, (The Canadian Gateway to the Thousand Islands, and in direct communication with the United States by ferry to Clayton, N.Y.) midway between Toronto and Montreal and the most convenient and nearest border point through which the Rideau and other lakes which abound in the north, may be reached makes it one of the most important from the tourists' standpoint and in the general scheme of good roads. With the improvement of the north road, connecting with the Kingston-Ottawa Highway, all the towns and villages to the north stand to benefit from the improvements Gananoque has made. This is emphasized by the daily bus line between Ottawa and Gananoque recently inaugurated by the Ottawa Interurban Transit.

For the celebration, the Clayton and Newboro bands are being engaged and there will be block dances and other forms of entertainment in addition to the more formal gathering under the auspices of the Canadian Club.

Always bears the Signature of Chas. H. Fletcher

WILLIAMSBURG COUNCIL

The Council met at Williamsburg on September 5th, 1925. Members all present. Minutes of previous meeting read and adopted.

A meeting of the Trustees of the Public School Boards of the Township of Williamsburg will be held some time in October, 1925 for the purpose of discussing the proposed legislation to have just one township board and to take whatever action is deemed necessary in the matter. All ratepayers will be welcome to this meeting and to take part in the discussions.

The following orders and accounts were passed:

C. N. R. expenses, crossing gates for June and July	$56.47
Luther Deeks for 29½ rods wire fence	5.90
S. B. Barkley, gravelling, Con. 8	105.90
E. Cameron work on bridge	2.00
John Carlyle, 389 feet Elm plank	11.68
A. B. Coughlar, work on bridges	7.50
Ezra McMillan, paying help on crusher, McPherson pile	285.95
John Fyke, hauling one yard gravel N.T.L.	1.25
C. N. R. express on repairs for crusher	11.15
W. T. McMartin, Cedar for bridge	8.40
George Fetterly, 29 rods wire fence	5.80
R. L. Shannette, gravelling 3rd Con. H. L.	103.70
Ida Coughlar, for 182 yards gravel	72.80
J. E. Barkley work on bridges	2.00
John H. Wells, balance on 17 cord stone	17.00
Ed. Cameron, bal. on 4 cord stone	4.00
Grant Becker, balance on 40 cord stone	40.00
A. B. McPherson, balance on 36 cord stone	36.00
A. B. McPherson ground rent for stone pile	5.35
A. B. McPherson, for 33 7-8 cord stone	135.56
George Reddick, hauling gravel S. T. L.	38.00
Ezra McMillan, pay on salary as Road Supt.	62.50
Sawyer-Massey Co., repairs for tractor and crusher	48.57
Leader Publishing Co. advertising	4.35

The Council adjourned to meet again at Williamsburg on Saturday, October 3rd, 1925, at one o'clock

CEDAR GROVE

Mr. and Mrs. Edward Jarvis spent a few days last week with their daughter Mrs. Ralph Fincham, Louisville Landing, N.Y., and attended the Ogdensburg Fair.

Mrs. Wereley of Ottawa was a recent guest of her son Mr. W. A. Wereley and family.

Mrs. Wm. Myers and Mrs. F. McConnell spent a couple of days last week with Mrs. Myers' sisters, Mrs. Leslie Porteous and Mrs. Emmet Armstrong, Lisbon, N.Y.

Mr. Murray Myers of the M.C.I. spent the week end at his parental home here.

Miss Jessie Waldruff of Montreal was the guest of Mr. and Mrs. Fred Dafoe for a few days recently.

Mr. and Mrs. F. A. McConnell and Miss Muriel accompanied by Mr. and Mrs. R. F Gallinger and Miss Fern, of Gallingertown and Mrs. A. E Shaver visited Mr. and Mrs. Albert Fickes Newington, on the 6th.

Mrs. A. E. Shaver of Port Angeles, Wash., is the guest of her niece, Mrs. Frank McConnell.

Mrs. Frank McConnell and Mrs. Alonzo Shaver visited Mr. and Mrs. Arthur McMillan, Finch on Tuesday.

Mr. G. Boggart of Berwick was a recent guest of his aunt, Mrs. W. T Dafoe.

Mr. Joe Robinson, Mrs. T. Sloan, and daughter Miss Doris and Mr. Cameron all of Smiths Falls were callers at Mr. C. F. Dafoe's on the 6th.

Rev. Mr. Bender of Aultsville made some pastoral calls in this section on Saturday.

Mr. and Mrs. Frank Dafoe and Mrs. W. T. Dafoe motored to Iroquois the 6th and spent the day with Mr. and Mrs. Ernest Marcellus.

Miss Mabel Wells spent the week-end and Monday at her parental home, Aultsville.

WHEN IN NEED OF A SOUND INVESTMENT

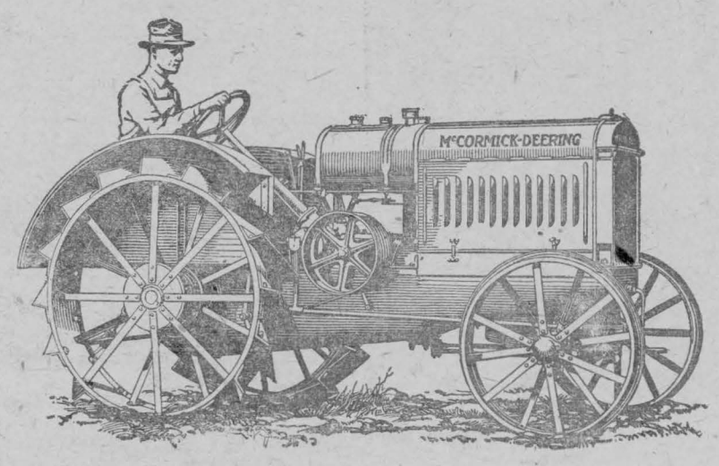
McCormick Deering Kerosene Tractor



THESE TRACTORS ARE EASY TO OPERATE.
"AS EASY TO DRIVE AS MY AUTOMOBILE."

A McCormick-Deering tractor can be used to advantage by the man who needs more power than that suppplied by a stationary engine McCormick-Deering Tractors are made in two sizes, 10-20 H.P. and 15-30 H.P. For both field work and belt work they produce profitable economical power and enable their owners to get the work done on time and in season.

The 10-20 pulls two plows under average soil conditions, and is the right size power for a thresher with a 22-inch cylinder. The 15-30 pulls three plows under average soil conditions, or drives the large belt driven machine. It is the right size for a thresher with a 32-inch cylinder.

Filters Your Gasoline

Gives more Pep to Your Motor

Made and guaranteed by the manufacturers of the famous Alemite Lubricating System.

If you could see the gasoline your motor contends with, you would not be surprised that it sometimes rebels.

The trouble is that practically all gasoline contains some dirt and water. Bits of rubber and fibre rot from the filling hose, water condenses from the air inside the fuel tank, metal flakes peel off and pass through the gasoline pipe and into the carburetor. Naturally the delicate needle valve of your carburetor is clogged and thrown out of adjustment. Then your motor sputters and misses and perhaps stalls completely.

ALEMITE GAS-CO-LATOR

attached to your vacuum tank provides the very fine filtration necessary for gasoline before it passes into the carburetor.

Perfectly clean gasoline means new pep and power greater flexibility and fewer repair bills. It will give you a new conception of motoring.

PROTECTION against fire. Protection against cold drafts, vermin, repairs, deterioration — these are only a few advantages Gyproc gives your farm.

Gyproc is fireproof wallboard made of solid rock. It comes in convenient ceiling-high sections that can be sawed and nailed like lumber. Light and easy to handle.

Gyproc is durable and permanent. No repairs are ever necessary. Yet the cost of construction is less than lumber because Gyproc can be applied in half the time.

Ask your carpenter or builders' supply agent about Gyproc.

POISON WEEDS

BY WOODS HUTCHINSON, M.D.

Weeds are pesky things. No one who has ever lived on a farm has the slightest affection for them. They are the visible sign and aftermath of the fall in the Garden of Eden—"Cursed is the ground for thy sake; in toil shalt thou eat of it all the days of thy life; thorns also and thistles shall it bring forth to thee; and . . . . in the sweat of thy face shalt thou eat bread."

We can understand the upstanding, open and above-board prickly kind of pests and even have a sort of grudging respect for them. They stand right out, with all their bristles up, and give us battle.

Also we can make some allowance for the regular "professional" weeds, which boldly try to "jump the claims" of our precious crops. They know a good thing when they see it.

Many of them indeed, like parsley, lamb's-quarters, dandelions and chicory, were garden vegetables or potherbs in Europe, though we must remember that they will eat almost anything as potherbs in Europe—they have to!

The dead bodies of these weeds are, in fact, beneficial when plowed under, while the work required in their destruction tears up and loosens the ground magnificently to let in the deep soil bacteria.

ENEMIES IN DISGUISE.

Yet when it comes to weeds which attack the cultivator instead of the crops, we lose patience entirely, especially when they deliberately try to lure us into striking distance by imitating friendly and harmless plants and by putting on lovely colors. Or, like the ragweed, having no dagger to stab or colors to attract, some launch literal gas clouds of sneeze pollen on the evening breeze.

The chief camouflaged Borgia of our fields and pastures is our ancient and far-too-familiar enemy, poison ivy. He is a fakir from start to finish, called ivy, but really a sumac. When he grows like a shrub we call him oak, and when like a vine, ivy, but he's "pizen" all the time.

You can tell him by his beautiful shiny trefoil, or three-pointed leaves, polished mahogany in the spring, vivid metallic green all summer, and crimson and gold in the fall, his livid, greenish white cluster of flowers and ashy-white berries.

But he is not so deadly black as he is painted. He does not spread his venom abroad upon the breeze. Yours is "the skin he loves to touch." The poison or toxin is a tough oily resin, and can no more evaporate into the air than could linseed oil. People who declare themselves to have been poisned by walking past ivy vines thirty yards away may have kept that distance from all the ivy they saw. But you never know what you touch without noticing it when you go into the woods, especially if you have your attention fixed on something besides the brush you brush up against.

Ivy's second redeeming feature is that he's slow to take hold, like mustard gas in war. A thorough scrubbing with soap, hot water and a nail brush any time within half an hour or even an hour after the encounter will wash off all the thick, slow-melting oil resin before it has had time to dissolve and penetrate the skin.

It's a good idea, if you know you are susceptible to ivy and have been in woods or pastures where it abounds, to scrub your hands thoroughly with sand or mud instead of soap at the first stream or pond you come to on your way home. This will prevent nine-tenths of all possible poisonings.

The third redeeming feature of ivy is that the worst poisonings blamed on him are really due to "bugs" scratched into the skin by exasperated finger nails trying to dig out the intolerable itching of his bite. Of course he is accessory before the fact, but he's not the principal offender.

In other words, those terrible inflammations that spread right up the lymph chains of the arm and make swollen and sore the glands in the arm pits are really secondary infections with our old friend, *Streptococcus A.*

If you don't discover that you've been "sumacked" till you feel the itching and see the rash, the cure is the same as the prevention. Scrub thoroughly with soap and hot water and finish off with some form of denatured alcohol suitable for wound use, or some mild antiseptic like iodine, boric acid, or one of the new coal-tar dye antiseptics which your doctor can suggest.

If by bad luck you have both the ivy and the infection, there is no use to scrub; it's a doctor's job then and a big one. Go see him at once.

But the best and surest means of prevention is to put a note on your farm calendar for September, "Get after poison ivy and other fence-corner brush and weeds." That is a good time, because ivy's in full blaze of color and as easy to detect as a prairie fire. While you're at it, you might take along also any of the other bushes or weeds that are making trouble in your section, such as barberries for the black rust of wheat and wild currants and gooseberries for white-pine blister.

Of late years we have been discovering other "unfriends" among our plant neighbors whose methods are even subtler and more distressingly effective, and some of these are literally members of our own household—not wild men of the woods, like ivy and briers and nettles. Indeed, the first shocking accusations involved two plant friends always regarded as beauty and innocence personified—the red, red rose of our cottage gardens and the new-mown hay of our meadows.

At first we repelled the absurd accusations with scorn, even resentment and indignation. The scent of the rose, the most ravishing perfume of all times, worshipped by lovers; the fragrance of new-mown hay sung by every poet!

For there's nothing on earth
Like making love
Except making hay in fine weather.

That these two most ethereal delights should be insultingly and prosaically linked with colds in the head, snifflings, sneezings and asthma! But unromantic scientists, blind to beauty or charm, proceeded calmly and ruthlessly to dub one form of summer catarrh as rose cold and another as hay fever. And the worst of it was the names stuck.

But the cold-blooded scientists showed that both rose and grass were actuated solely by the worthiest and highest possible motives—the perpetuation of the species by the spread of their pollen.

Broader studies revealed that they were by no means the only innocent offenders in this regard; indeed, quite a number of plants were literally broadcasting their pollen for purposes of fertilization. Perhaps it would be more correct to describe them as launching smoke screens of millions of tiniest pollen granules upon the winds.

Some of the pollen reaches its predestined mark, and all is well. But some of it, with apparently more of original sin than predestination, reaches a much less romantic mark in the back of a nose—and all is far from well.

But the question arises. Why does one human nose tune in with the broadcasted pollen of only one flower or plant, while another proboscis chimes in with meadow-hay radio and is deaf to ragweed melody?

A MATTER OF TASTE.

It finally all comes down to a question of individual taste or, rather, susceptibility. All sorts of pollens are radiated far and wide everywhere in their season, and all sorts and conditions of men inhale them. The vast majority pronounce them all harmless.

But it is just as strawberries are poison to one man, clams to another. The overwhelming majority cause no trouble to anybody. But when a small group of pollens get snuffed up into an even smaller group of touchy noses—probably not over 1 per cent.—trouble begins at once.

It is simply an instance of "what is one man's meat is another man's poison."

The hay fever, or summer catarrh, though caused by such tiny, infinitesimal trifling, is anything but a trifle.

Even in the milder forms, the sneezing, burning, running at the eyes, the "red-hot' headache, the wheezing, the swellings of nose and lips serevely interfere with both comfort and working power; and when they have grown into the full-blown haw asthma, and we have added to all these a constant wheezing and gasping for breath, which makes sleep impossible at night and only to be snatched in cat naps during the day, well, there comes a time when the victim begins to almost regret that the malady never ends fatally.

The number of snifflers attacked by this milder spring form of hay fever is small.

Usually all that need be done is to keep out of the woods and orchards as much as possible and to wear pledgets of absorbent cotton in the nostrils and goggles over the eyes to keep the pollen out. A few cases are more severe and must be treated by injecting extracts of the criminal pollen to produce immunity.

The next crop of the disease, in hay time, is more severe and increases in virulence and number of victims, probably because the number of pollen-broadcasting plants increases with the season.

Broadly speaking, there is little use trying to escape autumn hay fever.

What then is to be done. First go to your doctor and he can give you various sprays and washes and directions for the use of goggles and cotton plugs in the nostrils which will give great relief and often tide you over for the season.

But the one sheet anchor, the only permanent cure, is injections of alcoholic and watery extracts of the pollen at fault. These are gradually increased in amount until they produce that curious condition of protection known as immunity. With patience and skill, substantial relief and practical cure can now be hoped for in almost 75 per cent. of the cases.

There is nothing new about hay fever. It has probably been with us from the time when man first began to till the soil. For it is a farm disease caused chiefly by those "plants out of place" called weeds, which live on and around our plowed land.

As will have been noted by flower friends, very few real flowers, with colored petals, cause or spread hay fever, for the simple reason that these are fertilized by bees or other insects and have no need to fling their pollen abroad.

Kitchen Accessories.

One of the nicest things to have hanging in the kitchen, near the range, are several holders to use in handling dishes, pans, etc., and while one can buy fine ones in the household supplies sections of the stores, most women will prefer making their own. Every one has odd pieces of materials put away, so it should never be necessary to buy anything to make these holders.

Old ticking makes fine ones—using only a double thickness, sewing a small ring at one corner to hang it up by. These holders may be cut any size that seems convenient. To make them, turn in all the edges evenly and baste the two parts together, then stitch all around on the machine. They launder more easily when not made too bulky. Percale, linen, unbleached muslin, denim—one could almost continue indefinitely. Make six or eight at a time, then always keep them conveniently near, and use instead of taking silver or dish towels.

Some women like holders about twenty-seven inches long, and at each end a sort of pocket-shaped piece is stitched on. A hand is then slipped into each pocket and in that way one holder will take the place of two.

Cheesecloth — the medium-priced quality—makes good dust cloths, allowing one yard for each. It is better to buy the material and make them, if you have the time. Pull a thread to cut by, turn an even quarter-inch hem and stitch on the machine. Don't forget to fasten the threads. If well made, they will last much longer than otherwise. If you want cloths to use with furniture polish use the cheesecloth, making the pieces one-half yard long.

Ironing-board covers are another thing that careful housekeepers like to make. Shrink a rather heavy quality of cheesecloth, then lay a length on the board and cut out, being careful to allow for the thickness of the board, and a good seam besides down each side. The material should be wide enough to reach to the under side. Then cut pieces for each end—making them about eight or nine inches deep for the broad end. and deeper for the narrow end of the board. The piece for the narrow end should be hemmed across the bottom before stitching to the cover, and for the broad end of the cover, instead of cutting this end piece in one, it should be cut in two pieces, and lapped together at the outer end, finishing the ends and bottom with hems. This will allow you to slip the narrow end of the board in place and after the wide end is on fasten together with thumb tacks. Sew small rings at intervals each side of the cover and lace together with flat and narrow tape.

Two of these covers should be made at a time.

After Harvest Tillage.

Only the rich fellows can stand the losses. Robber weeds reduced the grain and pasture yields on many an acre this season. Conditions becoming worse each year, taking more profits than would pay the taxes.

Plow the land that you intend to plow immediately after harvest. Cultivate as frequently as possible with a springtooth up to the end of October. Rib up the land before freeze-up in November. This practice will help provide that the fence row and roadside weeds are cut in proper time to prevent seed blowing over the recently cultivated fields.

We have in our blackberry patch one cane that measures 211 inches in length. It is the longest I ever saw. —R. T. F.

Slapping a man on the back is not always striking him the right way.

Shrinkage in Harvested Fruit.

Loss of weight after harvest is an important factor in the handling of pears. It not only causes decreased tonnage, but is the main reason for wilting, and seriously impairs appearance of the fruit.

Wilted pears are dull and unattractive and do not become aromatic. Loss in weight of only 3 to 4 per cent. is usually sufficient to cause considerable wilt, according to investigators. In extreme cases loss of weight while in storage may total 15 per cent., it was found.

Two factors are responsible for loss of weight—natural decomposition and excessive loss of moisture. Since Natural decomposition has been found to be less than a fraction of 1 per cent. for an entire storage period, it becomes clear that loss in moisture is the main reason for poor condition of pears after storage. Relative humidity is one of the important points in storage. At a relative humidity of 80 to 86, loss of weight was found to be in the vicinity of less than 1 per cent., while the low humidity of 50 to 56 brought loss of weight to approximately 14 per cent.

Bartlett pears may lose 4 per cent. in weight if left a few days under the trees following picking, but if the boxes are covered with a wet canvas this loss is avoided. The type of wrappers has but little effect upon loss of weight in storage. Investigations in the use of oil wraps and common fruit tissues checked against unwrapped fruit showed little of practical significance.

Time of picking, however, has an important bearing upon loss of weight, which is also, of course, loss of volume. Fruit picked in an immature condition, it is well known, wilts readily. Loss also results very quickly with pears if any degree of overmaturity is attained before harvest.

Pressure tests are now used in many commercial orchards to determine the time of picking. In the investigations in question the pressure test was utilized to determine stage of maturity and therefore the best picking time. Bartlett pears testing forty pounds on a pressure test lost more than 90 per cent. weight during 264 days in storage, while those showing only twenty-five pounds' resistance to the pressure have lost 5 per cent. in the same period under identical conditions.

Twenty-five to thirty pounds resistance to the pressure test is the recognized stage for harvesting Bartlett pears. In making the pressure test several pears should be used, and the average taken rather than dependence placed upon a single fruit, since there will be some variation due to various natural conditions.

When putty cracks and drops off the windows within a comparatively short time after it is put on, it is because the wood was not painted shortly before the putty was put on. The best putty won't stick long on unpainted wood, or on old crumbly, dried-out weathered paint. Therefore, it pays to paint the wood first, let it dry and then put on the putty. A coat of paint applied on the putty after it has hardened will make it last longer.—H.

Two bushels of oats will take the place of one of corn for beef cattle over 800 pounds. If two bushels of oats cost less than one of corn, feed the oats, for it will be cheaper. For beef animals up to 800 pounds, oats can replace corn up to two-thirds of the ration.

Underfeeding is one of the greatest burdens of the whole dairy industry. The first purpose for which a dairy cow uses feed is to maintain her body, and before feed can be used for any other purpose, that part of the feed needed for maintenance must be supplied.

LACK OF SYSTEM IN HOUSE MANAGEMENT

BY MRS W. H. KING.

I passed a little house on the outskirts of town one warm day last week during the loveliest part of the day, to me, the late afternoon, just the hour when it is so pleasant to take one's sewing or book to the porch for a brief respite before beginning supper preparations; but on the porch of this little house sat no cool, calm housewife enjoying the pleasant lengthening shadows. No, indeed. She was on her knees instead, swishing a scrubbing brush and much soapy water and looking very hot and red and tired and, to tell the truth, somewhat cross.

"Work is never done in this house," she remarked with a sigh as she wiped her hands and prepared for a moment's chat. "I'm at it from morning to night, and then it's all to be done over again the next day and every day afterward."

As it was rather late to be cleaning the porch, I remarked that possibly she had been busy at some unusual enterprise, canning, perhaps, or ironing. But no, she said; she had merely prepared the meals and dusted and cleaned as usual, but that even these ordinary tasks occupied all her daylight hours.

While we chatted the soapy water cooled and the shadows grew longer and longer and I felt quite guilty to be delaying the process of cleaning the porch, but she was loath to let me go.

"If it were not for these little periods of relaxation I don't see how I could get through the day," she remarked plaintively. "I was saying that very thing to my next-door neighbor this morning when I ran in to see the new lamp shade she was making. It was such a lovely lamp shade, I just couldn't go home until it was finished. I would love to make one like it, but I cannot find time even to finish the mending."

And right then and there I discovered the reason why the porch was being washed in the late afternoon and why this woman's work was never done. She had never learned the secret of concentrating, of working steadily during proper working hours and getting done. Her work was dropped at the slightest provocation or whim—just a row to be crocheted on some lace she was making, just a page to read in some interesting book, just a few moments' telephone chat, just an idle half hour with some casual caller, and the golden hours of the day were gone, but the work was still to be done.

I did so wish I might tell this tired housewife that half her weariness was caused by lack of system, that planning ahead is the surest way of getting ahead in the matter of time as well as money; but I feared that she might resent my unasked advice.

Long ago I discovered that the only way to accomplish all the things I so earnestly wished to accomplish was to divide my day into working periods, playing periods and loafing periods.

In my working periods I really work steadily and vigorously; my play periods I devote to reading or fancy work or to doing some of the fascinating things that I enjoy. I have not so many loafing periods in my days, but I try to reserve a few odd moments for pure laziness or relaxation. In my opinion the loafing period is quite as important as the others, only it need not be so long.

It's sort of comforting to sit on the porch late in the afternoon just watching the sunset, with no pestering little prick of conscience telling me of some neglected task.

I wish my friend in the little house would try it.

Sweet Pickles That Won't Shrivel.

Since the delicate flavor of small sweet pickles is enjoyed by almost every member of the family, provide a number of jars of them for use on picnics and for the winter months.

To keep them from shriveling make them this way:

Select the small cucumbers, about 100 of them, and cover with cold water for an hour. Place them in a crock and add a brine solution in the proportions of 1 cup of coarse salt to a gallon of water. Allow the cucumbers to soak for 48 hours and be sure that they are tightly covered with a plate during the last 24 hours. While in the brine, the salt draws out the water in the pickles and leaves them shriveled and tough. If canned in this manner, they would continue to be tough, but they are not ready to be put in jars at this stage.

Soak the pickles in vinegar for an hour in order that the water may go back into them again and they may be made tender and turgid. (If the sugar is added at this time they are apt to remain shriveled). After soaking in vinegar, pack in sterilized jars, and pour boiling spiced and sweetened vinegar over them, and seal.

The amount of sugar may be varied according to taste, although 1 cup of sugar is considered a satisfactory amount for 100 two-inch cucumbers. The spices may be freshly ground in the coffee grinder and tied in muslin bags if the housewife prefers to have the vinegar remain clear in the jars. For this quantity of cucumbers, it is well to use 1 stick of cinnamon, 1 teaspoon of whole cloves, 1 teaspoon of whole allspice, and a bay leaf. If the vinegar is too strong it is well to dilute it, since too strong vinegar tends to soften the pickles too much.

In Abyssinia bars of salt are still in use as currency.

FRENCH DESIGNS ACKNOWLEDGE THE FLARE.

The interesting feature of this frock lies in the cut and arrangement of the panel, which gracefully ripples its way across the front and onto the back of the dress at the hip-line. The front and the back of the frock are plain. The edges of the panel are finished, or it may be lined throughout with contrasting color material. It is set in at the shoulder seams and tacked to the front and at the hips. The neck is cut in V shape and finished with a tucked collar of georgette crepe, the same material being used for the little jabot. The sleeves are long and simply gathered to a narrow band tying at the wrist. The diagram pictures the simple design of pattern No. 1077, which is in sizes 34, 36, 38, 40 and 42 inches bust. Size 38 bust requires 4¼ yards of 36-inch or 40-inch, or 3⅛ yards of 54-inch material. The front panel requires 1⅜ yards of additional material. Price 20 cents.

Our Fashion Book, illustrating the newest and most practical styles, will be of interest to every home dressmaker. Price of the book 10 cents the copy. Each copy includes one coupon good for five cents in the purchase of any pattern.

HOW TO ORDER PATTERNS.

Write your name and address plainly, giving number and size of such patterns as you want. Enclose 20c in stamps or coin (coin preferred; wrap it carefully) for each number, and address your order to Pattern Dept., Wilson Publishing Co., 73 West Adelaide St., Toronto. Patterns sent by return mail.

Father of Canned Food.

The father of canned food was a Frenchman, Nicholas Appert, who preserved foods by heat sterilization and sealing in 1795.

BRITISH SCHOOL TEACHERS ARRIVE IN CANADA

The above picture shows the party of one hundred school teachers from the British Isles who have come to this country to study educational methods here. They are shown outside the Chateau Frontenac, at Quebec, after they had landed from the Canadian Pacific steamship "Empress of Scotland."

WHEN THE NERVES ARE OUT OF GEAR

They Need New, Rich Blood to Restore Their Tone.

Men and women with nerves out of gear become irritable and fretful and are blamed for ill-temper; whereas the fault is not theirs. Their poor health is the cause. The tired, overbusy wife or mother, whose household cares have worn her out; the breadwinner whose anxiety for his family has worried him until he is thin and ill, are the nerve sufferers who become run down. Their nerves, like all bodily organs, need healthy red blood; worry tells on their digestion and their nerves are ill-fed. In such cases a course of Dr. Williams' Pink Pills is necessary, for these pills make new blood and tone up the nervous system. The patient becomes full of energy and happiness for themselves and others returns. Mrs. Wm. Hughes, Coldwater, Ont., has proved the value of Dr. Williams' Pink Pills, and does not hesitate to say so. She says:—"Two years ago I suffered untold agonies with my nerves. The pains in my head and the back of my neck were unbearable. I was depressed and cranky all the time. All the rest I took and best of medical attention did me no good. I was advised to try Dr. Williams' Pink Pills and after taking them for a time felt much better. I continued their use with great benefit, and after my baby was born they were the only tonic that helped me nurse her. I found them a splendid blood enricher, and cannot recommend them too highly."

You can get these Pills from any medicine dealer, or by mail at 50 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

A Name to Suit the Case,

The ease with which many of the recent accessions to the population change their names is illustrated by the following true anecdote.

The teacher in a public school became so interested in a little Polish girl that she was anxious to learn of her progress after she was promoted to a higher grade and asked her new teacher concerning her.

There is no such child in my room," answered the one so questioned.

"No Marie Levenski! Why! I know that she was sent to your room, for I asked about it at the time."

"There is no Marie Levenski in my room. I am very sure," persisted the other.

"But I have seen her go in the door, and there she is now," darting as she spoke toward a small girl approaching from the opposite direction. "Isn't your name Marie Levenski?" she demanded.

"It used to be, but now it is Mary Jones," was the calm reply.

"Mary Jones! How can that be?"

"Why, father buys and sells old junk, and one day there was a door plate with the things, and the name on it was Jones. Nobody would buy it, so we put it on our door, and now my name is Mary Jones."

A reporter in search of a "human interest" story asked a number of successful bankers and business men how they made their first thousand dollars. One of them replied that he didn't make it in any particular way. "It was like the old negro cook's hash," he said. "Some one asked her how she made hash. 'Bless you, missus,' she replied, 'nobody makes hash. It just accumulates.'" But you can't get hash unless you save the materials as they accumulate, and you can't get your thousand dollars unless you steadily saved some of the money that you earn.

The population of the whole world is estimated to be approximately 1,800 millions.

Tallest Tree in the World.

It is quite true that Australia has the tallest trees in the world, but they are not in Victoria, huge as are the Gippsland gums and the giant pines of Capt tOtway. The real super trees are to be found in Western Australia, down in the south-west corner of the continent. They are the giant flowering eucalyptus, growing on and adjacent to the shores of Lake Alexander; and they were discovered about 1896 by Chief Surveyor F. S. Brockman, of the Lands Department, Perth, when he was exploring the Geographe Peninsula under instructions from John Forrest (then Premier of Western Australia), who wanted to ascertain how much first-class land there was available in the "good rainfall" region. Brockman brought back with him some of the splendid scarlet flowers of these giants, also some seeds. He took accurate measurements also, and found one tree, the King of the Forest, going 147 feet up sheer, without a bough, and 537 feet to the topmost boughs and crown! The diameter of some of the trees exceeded 16 feet; and the Chief Surveyor, who was also a most careful and conscientious man, reckoned that they could not be less than 3,000 years old. It is said that there are trees older than that in the world; there may be, but there are none taller that I ever heard of, though in the valley of the Amazon, Roosevelt said he had seen trees as big as the giant redwoods of California. In making his report to the then Surveyor-General (H. F. Johnston), Brockman said that these trees, from a distance looked like a scarlet tapestry, spread below the hills." It would be vastly interesting to know whether any similar king trees exist in our own country. A lot of it is still terra incognita.

Pigeons Overrun London and Endanger St. Paul's.

The pigeons of St. Paul's, as familiar to tourists in England as those of St. Marks in Venice, have met with the displeasure of the authorities of the ancient city of London, who have asked Parliament to pass a bill banishing them from the precincts ruled by the Lord Mayor.

By continually pecking the mortar from between stones of the cathedral the pigeons are accused of endangering the great building itself.

The number of pigeons arount St. Paul's has increased greatly during the last few years because both tourists and native Londoners feed them. The birds have spread from the cathedral precincts at the top of Ludgate Hill until nearly every street of the city is ocerrun with them.

The plan is to destroy all of the birds except a few score which will be permitted to haunt certain parts of the lofts of St. Paul's as they have done for the last century.

Floating Fancies.

Reggie—"I have the most wonderful fawncies floating through my head all the time, Miss Sharp."

Miss Sharp—"Could it possibly be water on the brain, Mr. Sapp?"

Big Tree Planting Year.

Over 4,000,000 trees were planted last spring in the state of Massachusetts.

In Scotland, coal was worked as early as the 12th century.

Surnames and Their Origin

ABRAM.

Racial Origin—English.
Source—A locality.

One history of the family name of Abram has been discussed in a previous article. It is the obvious and indeed by far the most common origin. But there is another.

The family name of Abram is not always a contracted form of the Biblical given name of Abraham.

If you will take down your atlas and search diligently the map of England, specifically in Lancashire, you will find a little town which bears this name.

Here are the successive steps. Adburgham was originally pronounced with the 'gh' somewhat like the sound which the modern German gives to "ch." It was an aspirate somewhat hoarser than our present softly breathed "h," but not a full guttural like the hard "g." The first stage was the tendency to soften this "h," making the pronunciation "ad-bur-ham." The next step was to slur over the vowel in the second syllable, which at the same time involved silencing the "h," giving as the pronunciation "ad-bram." But the combination of "dbr" is a bit difficult, so that in everyday speech the "d" would be neglected, giving "abram." The changing of the "a" to the present "long" sound of that letter as in "day," was part of a general trend of the English tongue in comparatively modern times.

RINGGOLD.

Racial Origin—Welsh.
Source—A locality.

Here is a family name calculated to throw you on the wrong track at once. Superficial consideration would classify it as probably of Anglo-Saxon or general Teutonic origin, a combination of the two words which have given us our modern words "ring" and "gold," and the former of which was used in very early Saxon days to mean "money" (rings being used then as currency).

But the surname of "Ring-gold" has nothing to do either with "ring" or "gold." It was not originally an English or Teutonic word. It was Cymric, or Welsh. or did it designate any kind of article, but rather a kind of place or locality.

"Rhyngol," the older form, had the same meaning as the Anglo-Saxon word "cliff," that is, either a steep bank or a cleft through high ground. And so as a family name it has the same meaning, and is in fact the Welsh counterpart of such names as Cliff and Cleve.

Of course, in its first use as a surname its descriptive use, it was preceded by a prefix meaning "at," "or" or "from" in exactly the same manner that the earliest forms of the name Cliff are found with a prefixed "a'tte" ("at the") or "de la" ("of the"), showing conclusively its origin as indicating the place of residence of the first bearers.

WE WANT CHURNING

CREAM

We supply cans and pay express charges. We pay daily by express money orders, which can be cashed anywhere without any charge.

To obtain the top price, Cream must be free from bad flavors and contain not less than 30 per cent. Butter Fat.

Established for over thirty years.

That Little Candle.

In her most interesting biography, John Keats, published only a few months before her death, Miss Amy Lowell tells once more the ever-touching story of the great English poet's sickness and death in Rome, tended only by his faithful friend, the artist, Joseph Severn. In a strange city, among a people terrified at the word consumption, and with no proper conditions or skilled nursing available, even had they not been straightened formoney, there were times when poor Severn—keeping as much of his worry and exhaustion from the invalid as he could—scarcely knew which way to turn or how to drive himself to do all that he must. But he never for a moment failed his friend. He cooked, he cleaned, he swept, he tended, he watched, with a heart-broken courage and patience that have given him a finer and firmer hold on remembrance and gratitude than the best achievements of his brush. Keats would occasionally refuse food. Severn would sometimes prepare his meals six times over, in the hope of tempting his appetite, keeping from him the trouble he had in doing it.

At times Keats would not even attempt to eat, says Miss Lowell. Once Severn made him a cup of coffee, but he threw it away; this was repeated a second time with the same result. On Severn's appearing still a third time with more coffee Keats was ashamed and deeply affected. Yet, throughout all these weeks Keats's mind was occasionally capable of its old elasticity and charm. Severn, who sat up night after night, sometimes fell asleep from sheer exhaustion. Fearing that some night the candle might burn out while he slept and Keats wake in darkness, he one evening tried the experiment of fastening a thread from the bottom of one candle to the wick of another. Keats awoke just as the first candle was guttering out, and while he waited, not liking to call Severn, the thread ignited and successfully bore the flame to the second candle, at which Keats suddenly cried out:

"Severn! Severn! Here's a little fairy lamplighter actually lit up the other candle!"

The candle that it lit was more than one of wax; for more than a century its glow has lighted a picture of the dying poet's grateful surprise, and his friend's tender and faithful service.

How far that little candle throws his beams!
So shines a good deed in a naughty world.

He—"You're the sweetest girl I ever saw."

She—"Sweetness can't be seen."

Cut Glass.

Decorated glass which is not "cut" has been moulded, that is, it has been poured while molten into a mould, and allowed to cool off, jelly-fashion.

Whatever care is used in the process, however, the result is never quite perfect. Air bubbles form between the glass and the mould, or the molten mass throws off steam, in either case spoiling the clean-cut edge of the decoration.

The very finest results are only to be had by actually cutting the glass, expert workmen making the pattern by the use of successive cutting and polishing wheels. In this way, an absolutely sharp edge is obtained, and as only the very finest crystal glass will stand the process, a result is obtained in which every particle of the cut design throws off the light like the facets of a diamond.

The web of a spider comes from some glands back of the abdomen containing a liquid. When this strange liquid is ejected it instantly hardens into a thread upon contact with the air. Great is nature.

Do not expect a perfection in children which you have not yet attained for yourself.

Minard's Liniment for Distemper.

Havoc!

John O'London, the famous literary weekly, recently instituted a competition for the best brief picture of "Things Seen." First prize was awarded for the following graphic picture of the terrible forest fire which swept a soldier settlement on Vancouver Island two years ago. It was written by "M.F.C."

"Six-fifteen on a stifling July evening, and through the shack door a picture of heavy crops and a distant background of forest veiled in haze.

"Mother was pulling two lusty youngsters from their tub. Buller lay panting on the step. Selina purred around my bare ankles. Peace!

"Then, suddenly, a roar arose far away like thunder, leaping intervening miles, shaking the shack like bombs. The misty, blue belt of giant firs became instantly a scarlet, racing wall of shrieking flames. Fire!

"In twenty seconds father had the car speeding right into the now dense fog. Mrs. Wilford and her new baby! "Highway!" he shouted, hoarsely, and we ran, madly, blindly—no time for shoes—through suffocating horror; the roses by the burning gate, our proud tomatoes, the ripening branches of gooseberries, now torches in the gloom;; red tongues danced from cabbage to asparagus before our flying feet—over hot stones—to the open road.

"In twenty-seven minutes all was over. A strip of soldier settlement "ripe unto harvest," five miles long, three miles wide, with twenty-six new houses, gardens, barns, stock, pets, treasures, medals, gone. Lives wrecked—and one boy, cutting wire fences to let his cattle escape found—dead."

GREAT HELP TO YOUNG MOTHERS

Baby's Own Tablets Have Many Uses and Are Absolutely Harmless.

To have in the house a simple harmless remedy for the minor ills of babies and little children is a great boon to young mothers and this is exactly why Baby's Own Tablets have been found in many households. They reduce fevers, allay the irritation of cutting teeth and regulate the bowels, yet they have no drug taste and children like them.

Mrs. Mary L. Damel, Central Falls, R.I., says: "Baby's Own Tablets are just what they are recommended to be. My little girl was badly troubled with pin worms, was feverish and restless and would be awake all night. I got a box of Baby's Own Tablets and they helped her at once. She is not nervous now and sleeps well at night. I have never used a better medicine for this trouble. I have also found Baby's Own Tablets good at teething time and am glad to recommend them to other mothers."

Baby's Own Tablets are sold by all druggists or will be mailed on receipt of price, 25 cents per box, by the Dr. Williams' Medicine Co., Brockville, Ont. A little booklet, "Care of the Baby in Health and Sickness," will be sent free to any mother on request.

A King's Simplicity.

You may remember that during the war, King George cut down his wine list to a minimum and lived on the very simplest fare. In setting this example during a time of need he was not really departing greatly from his normal tastes, for he likes homely diet and prefers simplicity at meals to ostentation.

When he strolls to Sandringham House from York Cottage to have a meal with his mother, he is always distressed if a special dish is prepared for him. One day, when he dropped in to lunch and an extra item was added at the eleventh hour, he exclaimed:

"Why should all this fuss be made, just because I come to lunch?"

All the same, if ever the King condescended to visit my house, I should not be able to resist the impulse to provide an extra course or two. And I would see that the fish course did not include plaice. This is the only fish King George does not enjoy.

Ask for Minard's and take no other.

Nothing cools love so rapidly as a hot temper.

You have been intending to try "Red Rose." Why not now before you forget.

RED ROSE TEA "is good tea"

The ORANGE PEKOE is extra good. Try it!

The Model Child.

Every mother hopes that her child will be a model child, and some secretly think that theirs are models, although they are apt to add that they "don't expect children to be perfect!"

But we quote a wise old French philosopher, "Children need models rather than critics." When we come to sift the matter down a model child needs a model mother.

A school teacher readily recognizes those children whose mothers are "on their job," for well-behaved children come from such homes. And while mother's influence is first, nearest and most personal. The hand that tucks the cover in at night is more intimate than the one which corrects the arithmetic paper!

Of course the conscientious mother teaches her child honesty, kindliness, charity, thrift, good manners and many other details of good character and breeding. But the model child is not conscious of such teaching, the model mother teaches by example. Children, being extremely imitative naturally, observe and copy whatever is close at hand. The model mother does not say, "Respect your elders," she goes out of her way, herself, to show deference to the grandparents, and the children unconsciously take the cue in their manners toward old age.

If a mother's voice is sweet and gentle, children are far less likely to snarl at each other. If she is scrupulous about paying bills and giving everyone his due, the model child likewise scorns to cheat.

When a mother permits no waste in the kitchen, keeps clothes neatly mended, brushed and cleaned, the model child, though he does not become faultless at once—this is too much to expect—has nevertheless the idea of thrift and orderliness very firmly fixed for the rest of his life.

Children, of course, need direction and advice, which can be suggested in a friendly, tactful way. But the model child is really the result of a model mother—for about all "Children need models rather than critics."—Marion Brownfield.

Youthful Ideals.

Some of us achieve our ambitions. One day, when Lord Oxford and Asquith was a boy, he handed a list of M.P's. with their constituencies to Sir William Barrett, and asked to be examined on the subject. He passed the test with flying colors, but Sir William inquired what possible use this test could be.

"To help me when I enter Parliament," was the reply. "I am going to Oxford, then to the Bar, and, when I have made enough money, into Parliament. Then I shall get into office under the Liberal Government and become Solicitor-General. After that I shall be Lord Chancellor or Prime Minister—one or the other.'

Sentence Sermons.

It Pays To Remember—That the judgment day is the day we make for ourselves.

—That life's simplest pleasures are the ones with the lasting joys.

—That no man can give his best to two women at the same time.

—That life's sweetest joys go to the pure in heart.

—That a profit without honor makes no man honorable.

—That God can afford to wait—He has plenty of time.

—That a mere infatuation is poor home making material.

RHEUMATISM
Apply Minard's to the aching spot and get quick relief.

MINARD'S "KING OF PAIN" LINIMENT

BABY USED TO CRY ALL NIGHT

Pimples on Face and Limbs. Cuticura Heals.

"Pimples broke out on the side of my baby girl's face and later on her limbs. They itched something terrible and she used to scratch them causing the trouble to spread, and also irritated it. Her clothing aggravated the breaking out on her limbs and she used to cry about all night.

"I read an advertisement for Cuticura Soap and Ointment and sent for a free sample. I purchased more, and after using one and a half boxes of Ointment and one cake of Soap she was healed." (Signed) Mrs. Bennie Shelburn, 4039 W. 119th St., West Park, Ohio, Aug. 22, 1924.

Use Cuticura for all toilet purposes.

Sample Each Free by Mail. Address Canadian Depot: "Stenhouse, Ltd., Montreal." Price, Soap 25c. Ointment 25 and 50c. Talcum 25c.
Cuticura Shaving Stick 25c.

ASK THIS HALIFAX NURSE

She Is Willing to Answer Letters from Women Asking About Lydia E. Pinkham's Vegetable Compound

Halifax, Nova Scotia.—"I am a maternity nurse and have recommended Lydia E. Pinkham's Vegetable Compound to many women who were childless, also to women who need a good tonic. I am English and my husband is American, and he told me of Lydia E. Pinkham while in England. I would appreciate a copy or two of your little books on women's ailments. I have one which I keep to lend. I will willingly answer letters from any woman asking about the Vegetable Compound."—Mrs. S. M. COLEMAN, 24 Uniacke Street, Halifax, Nova Scotia.

Could Not Sleep Nights

Dublin, Ontario.—"I was weak and irregular, with pains and headaches, and could not sleep nights. I learned about Lydia E. Pinkham's Vegetable Compound by reading the letters in the newspapers and tried it because I wanted to get better. I have got good results from it and I feel a lot stronger and am not troubled with such bad headaches as I used to be and am more regular. I am gaining in weight all the time and I tell my friends what kind of medicine I am taking. You may use my letter as a help to others."—Mrs. JAMES RACHO, Box 12, Dublin, Ontario.

* * *

As we go to press we learn of the drowning of Mr. Frank J. Marsh, B.A., son of Mr. and Mrs. J. N. Marsh of Knowlton, Que. Marsh was 26 years of age, a medical student at McGill University and was employed on a boat during the holidays. While his boat was locking through here the young man went in bathing, and it is thought he took a cramp and went down. Mr. Fred Clark, who was at the locks at the time of the accident, went out in a row boat and recovered the body shortly after it disappeared. Coroner Dr. Locke of Williamsburg was summoned, and pronounced the death accidental, no inquest being necessary. The body was removd to Marsh's undrtaking parlors, and the remains will be conveyed to his home, Knowlton Que., on Saturday a.m.

Pembroke is talking separation from the county of Renfrew for municipal purposes. It is thought that separation would save the town considerable money.

"Tell the Fair directors for me" said W. D. Campbell of Rideau Ferry, "that one day is enough for their Fair—the same as Lombardy." This suggestion was in reply to the directors' invitation for suggestions of how to improve the Perth Fair.

In passing through the Canadian channel near Grenadier Island late on Sunday afternoon the steamer Riverside, returning to Ogdensburg from the trip among the islands grounded a couple of times in rapid succession on bottom due to the very low water in the river.

Hon. J. S. Martin has been telling the American poultrymen, in convention at Des Moines, that Canadian producers of eggs want the tariff of three cents per dozen raised to eight cents. He believes that this, no doubt will be done in the near future as a mere act of justice

The detour between Maitland and the Blue Church road on the provincial highway between Brockville and Prescott has been lifted with the practical completion of the new road surface.

Henceforth, or until a certain act of Parliament is repealed we are to have a half-holiday in connection with every Federal general election in Canada.

While Winchester slept last Thursday night a burglar broke into the generl store of A. Sweet & Co. and relieved the vault of $350. The burglars entered the store through a window in the back of the storehouse, and finding the door leading into the main building locked lifted out another window, giving them access into the office. It is supposed they tried the combination on the vault door and not being able to get it open, decided on breaking through the outside wall. They broke a hole at the south end of the vault which is nearly two feet thick and composed of quarry stone and mortar. Upon entering through this hole, they took $350 in bills leaving $15 worth of silver behind. They seemed content with the bills as nothing else was missed.—Winchester Press
