MORRISBURG — ONTARIO

MRS. R. H. BRADFIELD

On Saturday morning, April 30th, at her residence, Union street, Mary Ann Bradfield, widow of the late R. H. Bradfield, passed away, in her 89th year.

Deceased was a daughter of the late Capt. John Doran and was a life long resident of Morrisburg. Of a family of three children, only one remains to survive her, in the person of Mr. Herbert H. Bradfield, the late George F. Bradfield and a daughter Julia, having predeceased her some years ago.

The funeral service was held in St. James Church, Monday, by Rev. Archdeacon Carson and interment was made in the family plot, St. James cemetery.

J. C. FETTERLY,
Scoutmaster.

CANADIAN PICTURE IS GREAT SUCCESS

"The Man from Glengarry," the Ralph Connor classic of the Ottawa lumber woods, received its first presentation in Toronto as a moving picture at the King Edward last night. A representative audience, present on the invitation of the Toronto Publicity Bureau, evidenced hearty appreciation of its emotional interest and original thrills, given in photography of a high order. This is one of a lengthy series of Canadian movies produced by Ernest Shipman, himself a Canadian, and the audience learned from Mr. Shipman that his enterprise is meeting with good commercial success, as well as answering the allegation that movies cannot be made in this country.

Sees Export Business.

"Canada is paying about $4,000,000 a year for its film entertainment," said Mr. Shipman. "We can export $4,000,000 worth of pictures a year by a continuation of this effort."

"The Man from Glengarry" is laid in the lumber woods of the Upper Canada and in and near the city of Ottawa. The main theme of the book has been followed, but the action in Ottawa is of the present day, with embellishments of the social life of the Capital, in the form of dancing at the Chateau Laurier.

The scenes in the North country are of startling realism. Lumberjacks swarm in the woods and in the shanties, and most interesting and thrilling of all in the "log-birrelling" contests and the driving in the swirling river. The home missonary, who is there to counteract the "original sin" of the shantymen; the camp boss and his rival of the opposing company; the bad man, Lenoir, who conspires to set the forces of evil at work—all these with a mixture of a love affair, supply a narrative that is of heart interest.—This picture will appear in the Music Hall, Morrisburg, Tuesday May 15th, 1923.

WILD GOOSE PAYS HIS SECOND VISIT

Chums with Ducks at Jack Miner's Bird Sanctuary.

Kingsville, Ont., April 30—Identified by a tag attached to one of its legs last fall when it swooped down and made itself quite at home among thousands of wild ducks at the famous Jack Miner bird sanctuary here, an immense specimen of the Canadian wild goose, arrived back at the duck pond yesterday afternoon. Its presence was made known to Mr. Miner by a deafening chorus from the ducks.

He had little difficulty getting close enough to the goose to establish its identity, after which he placed the visitor in a specially wired coop for safe keeping.

The goose stands a trifle over three feet high, and has a black neck and gray body. The wings when fully extended will measure, it is expected, between four and five feet.

Mr. Miner has named the big fellow Jack Johnson, and announces that he will present him to Ty Cobb if the Tigers succeed in winning this year's pennant. The goose is believed to be the largest specimen ever taken alive. He is pugnacious and resents the approach of visitors.

It is stated, on good authority, that Jack Miner will lecture in Morrisburg in the near future.

The Finest Model "45" McLaughlin-Buick Ever Built

The 1923 McLaughlin-Buick "45" Special took the country by storm. Always a favorite, this model reaches the highest pinnacle of value ever attained.

It is a beautiful car—it is luxurious—it is a mechanical masterpiece. Stand off and note the snappy lines, the higher hood, the full crown fenders, drum type head and cowl lamps. Then sit in the car. Here is comfort equalled only in the costliest automobiles.

Look about you—the upholstering and trimming are of the finest quality, the instrument board is equipped with richly-finished instruments, the control lever is at fingers' end, the cowl ventilator control and windshield wiper are within easy reach.

And the chassis shows far-reaching improvements. Even the famous McLaughlin-Buick Valve-in-Head Motor shows important changes. An inspection is cordially invited.

The Stealer of Sight

BY LUCK WILLIAMS.

PART II.

I looked at him wonderingly, perhaps a little frightened.

"You with sight cannot understand that," he continued, now angrily. "I learned to play with my violin so that I could feel color. There is no sound so beautiful or awful that I cannot achieve. And to me every sound is colored." He stopped, and recommenced abruptly with what I thought was another topic. "Have you ever heard of the Secret Note of Tibet?"

He paused again and then went on.

"It is practiced in Tibet, in the Hidden City. There they have secrets centuries old. Sometimes, to punish a criminal, they place him in a cell, and every so often a certain curious note is sounded. The constant repetition of that note is so awful that in some way it destroys the optic nerves. The man goes blind forever * * * I know that note!"

Then and not until then did my befogged brain realize this was a madman speaking.

"For some years I have been searching for that sound, and at last I found it. I did it by the colors I feel. Ah! you can't understand, but you will soon. I am going to sound that note again and again and again until you are blind. It can't hurt me. How could it?" He gave a laugh that was born of something blacker than mere blindness.

"And why you?" he went on. "It is not just because it is you. I've been waiting, preparing months for some one to come into my web. You happen to be the one. But you will be only the first. You should live in darkness. All the world should * * * Yes, I am going to drag you into the pit with me, where light never comes. Then you will know."

He went to the window, and, pulling aside the blinds, drew across the old-fashioned windows their heavy wood shutters.

"No one will hear us now," he muttered.

Without another word he took up his violin and bow and stood facing me. He was full in the glare of the gas, which was well behind me, and the silver of his hair and beard and the varnish of the violin reflected back the light. But his lustreless eyes seemed to absorb it.

He drew the bow slowly across the strings of his instrument. It is hard to describe what I heard. Beginning with a high-pitched sigh, it gradually rose and rose to a repressed painful shriek, ending in a discordant crackle that made me think of diabolical chuckling.

It set my teeth on edge, it was in such a high register. The note, if such it could be called, lasted about six seconds. He paused for about the same length of time before repeating it.

After the first unpleasant shock my feelings subsided into those of faint irritation as he continued to produce the note, punctuating it with evenly timed intervals. Then I laughed at him for the madman he was. What harm could that do?

The minutes sped on. I had no idea of the time or how it passed. Then I became aware that instead of the monotonous repetition of the sound having a soporific effect on me, it was riveting my attention all the time. During the pauses I was restless. I followed the rise of the note to the climax, and after the crackle was over I felt a temporary sense of relief.

He stood before me in the same position. His arms and fingers never seemed to tire, and never once did his staring eyes blink.

He must have repeated it many hundred times before my exasperation began to get acute. Why could I not get away from this madman and his strange, disturbing noise? The pauses appeared to be less lengthy, and as the Tibetan note commenced it would clutch something in my brain and bear it up to impossible heights. It was a genuine relief when the crackle was over.

"Quit fooling, madman," I tried to say, but the gag in my mouth permitted only a gurgle.

The man before me continued unmoved. Again and again he drew the bow across the strings, always producing the same sound. I watched his arm now to tell when the sound was going to begin. I anticipated it with dread. "Oh, for heaven's sake, stop!" I tried futilely to say. "It's unnerving." But he never stopped.

Slowly, subtly, I believed he had reduced the pause until there was no more of it. But, no, according to my eyes his arm still continued to rest the six seconds. My brain then was repeating the note to itself in the brief silence, like an echo. Would his arm never tire? Would he never cease?

On it went. Sigh, scream, crackle. But those three words of varying sounds cannot describe the horror of it. Five to the minute, five periods of intense annoyance, if not pain, five dull repetitions in my brain. And on, on, it went.

I was becoming angry, uselessly, wildly angry. The note was beginning to scratch the diaphragms of my ears like a red-hot needle; it was burning itself into my brain. "Is there something in it?" I began to ask myself. "Will it really send me blind?" Mad certainly he would drive me eventually.

Sigh, scream, crackle, always, endless it seemed in the air. "Oh, God," I prayed frenziedly, "cause him to stop." His arm rose and fell, his fingers crept the same as before. The set face betrayed no feeling, though the curve of his bitter mouth might have been more pronounced.

Then I thought I felt a burning pain at the back of my eyes, and a tight iron band seemed to compress my temples. I was becoming exhausted, and I prayed for forgetfulness to come over me. But the sigh, the crackle, held me firmly to consciousness. Not once was it fainter or louder, always the same sound, piercing, searing through my brain; one continual, awful note.

The pain at the back of my eyes grew more intense.

Then—was it my fancy or was the light in the room less brilliant? "Not that! Not that!" I mumbled to myself. "It can't be. It's impossible." I closed my eyes in fear. Sigh, scream, crackle. Sigh, scream, crackle.

Could the light in my eyes be really darkening? I opened them again. The pain behind them was scorching. My brain was all afire.

At that moment had the gag permitted it I should have shrieked aloud. My eyesight was failing. The varnish on the violin threw back no gleam as it had done before. The madman's eyes were no longer visible to me; they were just two black sockets. My vision became dimmer and dimmer. I could barely perceive the figure standing in front of me now. Sigh, scream, crackle. It was ever sounding.

In the violent movements of my mouth to speak, the gag slipped away, and I cried aloud. The terrible note stopped suddenly. My glance flickered here and there, but the room was growing darker and darker, until at last blackness pressed against my eyes, thick and impenetrable.

"You've done it, you devil!" I cried madly. "You've driven me blind!"

I heard a laugh ring out, fiendish in its triumph. My head fell forward, and, my mind reeling in that blank, stifling blackness, I remembered no more.

"Yes," a voice was saying, when I came to; "his nerves seem badly affected. But he'll be all right presently. Of course, old Gettle will have to be put away. He's completely gone."

"He wouldn't let me come in the room at first when I went up after hearing the shouting," my landlady said. "And when I did get inside the room was in darkness. But I noticed the gas tap was on. It's a slot meter, and the light must have failed gradually, as it always does. Of course, Mr. Gettle wouldn't know it had gone out, and as for this poor young man——"

Then I opened my eyes once more to the glory of perfect sight.

(The End.)

Liquid Air Explosive.

When liquid air containing from 40 to 50 per cent. of oxygen is mixed with powdered charcoal it forms an explosive which is said to be comparable in power to dynamite and can be exploded by means of a detonator.

This explosive has been tested in coal mines. The liquid air must be used within a few minutes after it is prepared.

Meteors and Steel.

A study of the great collection of meteorites in a European museum has led to the interesting conclusion that meteoritic iron, as it falls from the sky, and the various steels produced in our modern steel works are the results of essentially similar chemical and phyiscal action. One of the most striking characteristics noted in meteoritic iron is the presence of a considerable quantity of nickel.

Minard's Liniment for Corns and Warts

Medals for Minerva.

"Annie," called her mistress, "just come into the dining room a moment. Now look at this. Watch me. I can write my name in the dust on this table."

Annie grinned.

"It be a grand thing," she said, "t'ave a eddication."

Keep correct time. Start on time. Arrive on time. Work on time. Finish on time. Leave on time. In this way ample time is allowed for thoroughness.

NURSES

The Toronto Hospital for Incurables, in affiliation with Bellevue and Allied Hospitals, New York City, offers a three years' Course of Training to young women, having the required education, and desirous of becoming nurses. This Hospital has adopted the eight-hour system. The pupils receive uniforms of the School, a monthly allowance and travelling expenses to and from New York. For further information apply to the Superintendent.

Woman of To-Day

MAKING OLD FURNITURE NEW.

In nearly every home there is some piece of furniture which would look better if it were refinished. In most cases, these pieces of furniture will repay the housewife for the small expense which is incurred in refinishing, even if they are not fine heirlooms of colonial mahogany and walnut. The real antiques are usually beautiful in line and only need a good finish to bring out the great beauty of the woods. Many of the black walnut pieces of the Victorian age are capable of being converted into desirable furniture. The wood is beautiful, the workmanship excellent and in many pieces the lines are good.

We may be tired of and wish to renew a sideboard of twenty-five or thirty years ago. It is of good solid oak wood. If the underlying lines are simple and straight forward, the proportions good and the construction dependable, a satisfactory piece of refinishing can be done. The back can be taken off by removing the few screws in the cleats which hold it to the body of the sideboard. Sometimes it is possible to use the upper section of this high back, now wholly out of style, and have it put on to form a low back not more than ten inches high. Sometimes it is necessary to discard it entirely and get a new piece of oak for the low back. If this is curved, about eight inches high in the centre and five inches at either end, it will make a good appearance. The glued on carving will come off if pried carefully with a chisel. By refinishing the wood and substituting plain brass escutcheons for the fancy old ones, the sideboard of 1895 can be transformed into the buffet of 1923.

This is possible because in this old sideboard there were the three prerequisites of refinishing furniture: good wood, good construction and good lines. Add to these a goodly amount of patience, persistence and perseverance and we have a reliable recipe for success.

CARPENTER WORK.

Before any work in actual refinishing is done, a carpenter or cabinet maker should attend to all fundamental repairs which are necessary. Any structural changes, such as the removal of glued on ornaments should be made at this time.

EQUIPMENT.

Refinishing furniture is rather a messy job and should be done in some unused room and if possible where there will be little dust. The equipment is simple and will depend on the special problems arising with each piece. The following items may all be needed or it is possible that only a few of them will be called for: Varnish remover, putty knife, steel wool, sandpaper in coarse, medium and fine grades, stain, wax, turpentine, gasoline, linseed oil, a block of wood about 4x2½x¾-inches, an old knife, a sharp piece of broken glass, piece of steel and a wooden meat skewer. These can be secured as needed. The expense for materials is usually very small.

NECESSARY PROCESSES.

In the work of refinishing furniture there are two separate processes—first, removing the old finish, second, applying a new finish. In order to have the second part of the work successful, the first part must be done thoroughly. Every particle of the old varnish, paint or whatever has been put on in the way of finish must be removed.

The first method of attack is scraping. Anything which will not hurt the wood may be used for scraping. An old kitchen knife or a piece of glass or a steel furniture scraper will answer the purpose. Glass must be used with care as it is apt to break and cut the hands. The furniture scraper can be bought at any hardware store but will dull quickly and must be sharpened frequently.

(Concluded next week.)

Serve Raisin Food—Raisin Week—April 23 to 29

Have You Tried Them
from your modern bakers' ovens?

—These big, brown loaves of "old-fashioned" *full-fruited raisin* bread?

Note the raisin flavor that permeates these loaves.

Count the big, plump, tender, juicy raisins in each slice.

It's *real* raisin bread—the kind you're looking for.

Ready-baked to save baking at home. Delicious and convenient — and economical in cost.

We've arranged with bakers in almost every town and city to bake this full-fruited raisin bread.

Order from your grocer or a neighborhood bake shop.

Say you want the bread that's made with Sun-Maid Raisins.

Good raisin bread is a rare combination of the benefits of nutritious cereal and fruit—both good and good *for* you, so serve it at least twice a week.

Use more raisins in your cakes, puddings, etc.

You may be offered other brands that you know less well than Sun-Maids, but the kind you want is the kind you know is good. Insist, therefore, on *Sun-Maid* brand. They cost no more than ordinary raisins.

Mail coupon for free book of tested Sun-Maid recipes.

KEEPING YOUNG CHICKS GROWING.

Early hatching is important, but not more important than to keep the chicks growing so that they will reach maturity and the pullets start laying before cold weather sets in. Factors that are essential for the proper growth and development of the young stock are proper housing, feed and water, free range, shade, cleanliness, freedom from mites and lice, good management.

One of the best methods of feeding your young stock is to keep a hopper of dry mash before the chicks, so that they can readily eat whenever they want to. Almost any of the commercial chick mashes will do for this purpose, or the following mash will be satisfactory: Two parts by weight of cornmeal, two parts of middlings, one part of oatmeal (crushed oats), two parts of wheat bran and a half-part of sifted beef scrap. Supplement this with a dish or pan of sour milk and also one of clear bran, as the birds will eat readily of these foods. These, with the grain mixture and with proper care, should bring the chicks along in good condition. When they are eight or ten weeks old, add one part of ground oats and increase the meat scraps in the above mentioned mash.

HOPPERS SAVE LABOR OF FEEDING.

Large feed hoppers holding at least two weeks' supply of mash or grain should be scattered over the range, so the birds can eat whenever they want to. If you want to use hoppers for both grain and mash feeding, one hopper will answer the purpose by dividing it in the centre. Whenever possible, place the hoppers in the shade. They should be raised off the ground four or five inches to allow the air to circulate under them, which will prevent the mash from becoming moldy and damp.

Do not overlook the importance of giving the growing stock all the cool fresh water they will drink. This should be supplied at least twice a day and placed in the shade. Wash the drinking dishes every day and scald them with boiling water once a week.

After the chicks are five or six days old, if the weather is suitable, they should be allowed on the ground, as they will grow much faster, when once they are strong enough to go out on the range, than when they are confined to their brooder houses. Portable fences, or some other arrangement, should be contrived whereby they can be confined to a small run in front of their house until they learn to go in and out of their own accord. After about a week the fences can be taken down, as the chicks by that time will go to their own quarters.

If the chicks are confined to limited range, it will be necessary to cultivate the ground at frequent intervals if you wish them to make a good rate of growth.

If it is possible to do so, place the colony houses near the corn-field, as this answers two purposes. First, it provides shade for the young stock and fresh cultivated ground for them to run over, which also furnishes a considerable supply of bugs and worms. An orchard is also a splendid place for chicks to run, and the chicks are of considerable benefit, as they eat many worms and insects that are injurious to the trees. If neither corn-field nor orchard is available for this purpose, provide artificial shade by making light frames which may be covered with burlap. Be sure that they are high enough so that the birds will have no trouble in going under them.

Every effort must be made to keep the coops clean and sanitary, as disease most frequently starts in unclean quarters. Straw or some other litter should be scattered over the floor of the house to help in keeping it clean. If it is necessary to confine the birds for several days at a time due to rainy weather, the houses should be cleaned twice a week. Otherwise cleaning once a week is enough.

FRESH AIR ALL-IMPORTANT.

Beginning with warm weather, and continuing until fall, spray the colony houses at least once a week with a good disinfectant. The growing chicks should be provided with a house that will give them a place to stay in at night and during bad weather. It should provide them with ample ventilation without drafts, dryness and plenty of sunshine, and should be arranged so that it can easily be cleaned. The front of the house can be covered with one-inch mesh poultry wire netting, which will allow plenty of fresh air and keep out cats, skunks, foxes and other animals that are likely to catch the chicks at night. With such a house be sure that there are no cracks in the sides and back to allow drafts.

OVERCROWDING CAUSES COLDS.

See that the birds do not crowd in their houses at night. Do not place too many in a house. This matter of overcrowding is often overlooked and may have most serious consequences on the future health of the flock if allowed to continue, especially during the fall. At this season of the year the birds are apt to crowd at night to keep warm, and when let out in the morning into the fresh cool air they become chilled and catch cold. Colds, as we all know, soon spread through the flock and if not checked turn into roup.

In working with the young stock do not scare them needlessly. Move among them carefully, so as to get them as tame as possible, and you will find that they do much better than chickens that are wild and that come to you only when forced to do so by hunger.

PROVIDE MORE ROOM AS BIRDS GROW.

As the birds increase in size, they should be thinned out and placed in other houses. The colony brooder houses can be used for the growing stock after there is no longer need for artificial heat.

As soon as the cockerels begin to mate with the pullets, they should be separated and those that are not wanted as breeders during the coming year should be sent to market.

BUYING THE BROOD SOW.

Many farmers will be increasing their number of brood sows this spring, and to those will come the problem of selecting breeding individuals that will show results, with profits at the end of the year. Like all other phases of farming, the hog feeder should give his best thought to this business of pork production.

You must have an ideal type of hog in mind, one that fulfills all requirements, and that has withstood the experience of former years. More depends upon this ideal type than upon the breed. The interest of the feeder in his home market, should above all things, guide him in his selections.

In the purchase of a brood sow or a bred gilt for future breeding, you should carry in your mind the firm belief that you are buying a producer, one that will farrow a good-sized litter. There is a chance to be taken in this respect but you can insure yourself somewhat if the sire and dam were from large, healthy litters. It is of importance that your purchase should carry such a record.

The next important characteristic in the buying of a brood sow is the problem of feeding her new-born family. Consequently a real milking machine is of vast importance and a real necessity. Great care and attention must absolutely be given the sow and her new family to start the baby porkers on the right road to profits. You cannot use slip-shod methods, nor neglect the duty that is yours for the success of the litter. So when you purchase the brood sow examine her closely, see that she possesses a good udder, with places for twelve or more little fellows to partake of nourishment. This is an important foundation for the future development of a strong, robust and healthy litter.

As you have your ideal type in mind, do not neglect to adhere to it, for there lies your future success. I recently received a sale catalogue of a very prominent breeder. It was very pleasing to note that he was advertising individuality. Little does the average hog-raiser bother with individuality, and I dare say a majority are entirely at a loss to connect any such characteristic with brood sows or the hogs that are in his feed lots.

The feeder should endeavor to keep his brood sows uniform, all as near the ideal type as possible, so that their offspring will show individuality and quality that will command the highest market price on sale day. It is one sure way to more profits.

Where and when shall I purchase my brood sow or bred gilt? Public auctions and private sales should not be overlooked and if the individuals merit your approval, buy the number you need, being very careful in your selections. See that each one has the necessary vigor, thrift and vitality for the perfect mothering of the coming litter. See that she is big and roomy, with plenty of stretch, standing up well on all four feet and with good sized bone. See that she is active and in good healthy every-day condition. Avoid the undersized and real fat sows. To these requirements add a little common sense and what Old Man Experience has taught you.

Farmer Must Know His Business.

Folks are coming to the idea that if we farmers are going to get in better financial shape financially, we must work out our own salvation. From a business standpoint we are manufacturers. We make raw materials for the public. As such we should know what the consumer needs. Then in addition we should know how this material can be placed at the consumer's disposal at the least cost and in the best condition. Many of the problems of the farmer can be worked out by the individual farmer himself. Others will require the united efforts of many farmers. The fact remains that we must work together.—L. S. Tenny.

If your kitchen range cracks on the inside, don't throw it away. Mend the broken place with equal parts of wood-ashes and salt, moistened with water. This will prove hard and lasting.

Do Lightning-Rods Protect?

By R. U. Burningham

Every once in a while somebody says that lightning-rods are no good—that they do not protect buildings from lightning. Only a few months ago a big barn that was rodded was struck by lightning and burned to the ground. The owner built a new barn and decided not to put rods on it. "No use," said he. "The rods didn't protect the first barn."

Possibly it didn't occur to this fellow that the rods which failed to save his first barn weren't put up right; or maybe they were poor rods.

As a matter of fact, when a building is properly rodded with good rods, it will not be struck by lightning.

In 1912, eighteen companies operating in Ontario kept records which show that for every 200 farm buildings insured, forty-two were rodded, which is about 21 per cent. Out of every 200 farm buildings which were struck by lightning only three were rodded. One would expect forty-two to be struck if the rods were no good. For every 7,000 farm buildings insured by these companies, thirty-seven were struck by lightning, several being burned. On the other hand, out of every 7,000 rodded ones insured, only two were struck by lightning and none burned. In other words, an unrodded building is eighteen and one-half times as likely to be struck as a rodded one.

In Ontario, in 1913, reports of forty-five companies show that 26.2 per cent. of their risks were rodded. During the year, 193 claims for lightning damage to buildings were paid, thirty-six of which were burned, amounting to a loss of $40,904.53. However, only eight rodded buildings were struck, with a total damage of $57.64. This shows an efficiency of 99.5 per cent.

FARM BUILDINGS ARE BIGGEST RISKS.

About three out of four buildings that are struck by lightning are located in the country. City buildings are well protected from lightning, because they are equipped with water supply and heating systems, the radiator and pipes being connected to water-mains which make an excellent ground wire. Also, electric light and power lines and telephone wires, all of which are grounded, are in contact with city buildings; the grounding conducts the electricity away from the buildings as fast as it collects during a thunder-storm. While this does not afford perfect protection, yet there seems to be no question that wiring, water supply and heating systems are largely responsible for city buildings being safer from lightning strokes than country buildings, especially barns and outbuildings.

In order to understand how lightning-rods protect buildings you must know how lightning acts. It is often through lack of knowledge that the unscrupulous lightning-rod agent may get the best of you. If two positively charged bodies (charged with electricity) are brought together, they repel each other. But if a positively charged body and a negatively charged body are brought together, they attract each other. In other words, "like poles repel each other, unlike poles attract. Thus in the case of lightning, the cloud is the positively charged pole, the earth the negative.

As a thunder-storm develops, the air is able at first to resist a discharge from the cloud to the earth, but before long such a tension is developed that the strain becomes too great, the air can resist no longer and a discharge takes place. The area of danger zone is about equal to the size of the cloud, sometimes extending in front of the cloud. The greatest danger is with the passage of the storm front. Within this zone almost any upright object, such as a chimney, tree or cupola, being a better conductor than the air, may be struck.

All bodies do not act the same when charged with electricity. Some conduct the charge away at once; these are called conductors. Others retain the charge; these are non-conductors or insulators. Gutta-percha, glass, air, and wood, for instance, are non-conductors, while metals such as copper, iron, etc., are conductors. Trees, masonry, buildings, etc., will carry lightning, but offer so much resistance that they are splintered, destroyed, or heated to ignition when struck.

Telegraph and light wires are insulated from the poles by glass to prevent the current being taken up. It was thought for a long time that lightning-rods should also be insulated from the building, but this is incorrect. The rods should be attached directly to the buildings. This takes advantage of the fact that metal rods touching the building will take away the electrical charge which will otherwise collect on the building and may finally result in a stroke.

Lightning-rods serve a second purpose also. If the electrical charge should collect on a building faster than it is taken away, the rods will take care of the flash.

IRON, COPPER AND ALUMINUM RODS.

For many years iron and copper were the metals most widely used for lightning-rods. Recently aluminum has become a competitior.

Did you ever notice that the cable from the distributor to spark-plug on your automobile is made up of several small wires twisted together? Electricity seems to travel on the outer surface of a conductor, and the several small wires offer more surface than the same amount of metal in one solid wire. Lightning-rods are generally made of several small wires rather than one large wire. If iron is used, it could be in the form of a pipe, which offers a larger surface.

Copper has the ability to conduct a steady current of electricity six times as well as iron wire of the same size. Some tests show, however, that an iron rod will take off a "sudden rush" of electricity better than copper wire of the same size. Either metal can be very successfully used if it is made in correct size. Professor Day said that he examined a combination which has been in use for eight years and found the steel had been almost entirely destroyed by rust. Combination rods are made into one rod by placing the steel or iron wires inside a sheath of copper.

PUT THE GROUND RODS DEEP.

"Down to perpetual moisture" must be the specification for grounding lightning-rods in all cases. It may be as bad as no rod, or worse, to have lightning-rods if the soil is dry around the ground wire. You may think that a ground connection will always be wet during a thunder-storm because of the rain, but it often happens that the lightning flash will precede the rain storm.

TYPES OF GROUNDS.

1. The star-shaped ground consists of a series of wires soldered together in the shape of a star. To this star-shape the rod which extends up on the building is soldered. This form of ground is sometimes used for wireless stations.

2. Coiled wire or rod made in the shape of a spiral, with a diameter of about six inches.

3. Ground rod fastened, in an approved manner, to a plate.

4. A piece of pipe may be sharpened and driven down to perpetual moisture. The rod is fastened to upper end of the pipe, or the lightning-rod can be run to the bottom end of the pipe and the pipe filled with coke around the wire.

5. Lightning-rods may be attached to water pipe outside the building. The connection may be made by fusing the ground wire to a plug and screwing the plug into the water-main. Wells, cisterns and streams also make excellent grounds for lightning-rods. If the ground wires come anywhere near gas-mains, it is wise to make doubly sure of a good moist ground connection and get as far away as practicable from the gas-main. The flash may travel through a few feet of earth to such a main and melt it, or set fire to any leaky joints along its course.

6. If there is limestone rock under the ground, it may be hard to get down to perpetual moisture. Then it might be well to bury a long wire in a trench, dug as deep as possible, and pack fine coke around the wire. The coke should be moistened. In addition, soil which contains plenty of humus (not fresh manure), if thrown in the trench, will help to hold moisture. The powdered coke serves two purposes; it holds moisture and it is a conductor. The trench should be perpendicular to the foundation and should not run parallel with it.

PROTECT THE GROUND WIRE.

Where ground wires are located at corners of barns, they are likely to be torn away by wagons or other farm machinery. To protect the wires, build a box about six feet high, of 1x3-inch lumber, around each ground wire. Inspect the ground wire from time to time to see that it is intact.

WIRE FENCE PROTECTION.

The following recommendations are made with regard to protection of wire fences from lightning:

1. Ground the fence line at intervals of twenty or twenty-five rods.

2. Ground the fences at all intersecting fence lines or corners, and wherever abrupt turns are made.

3. Avoid making direct connection of fences to buildings, and ground all fences adjacent to buildings, especially fences surrounding barnyards.

4. Break the continuity of a long fence by using a pair of vertical wood bars as insulators of not over 100 rods, whereby electrical connections are broken.

5. Use three No. 12 or No. 9 wires, securely stapled to post, and in contact with all wires, for grounding. The grounded wire should project above the post and at least three feet into the ground. Metal posts used at intervals of twenty rods may be substituted for ground wires.

Use lightning conductors which conform to underwriters' requirement and have a reliable lightning-rod concern put up the rods.

Good Counsel for Hog Breeders.

A. A. MacMillan, Chief of the Sheep and Swine Division at Ottawa, gives excellent advice to swine breeders when he says: The profitable hog is the one that keeps growing from birth to finished market weight. Grow the pig out by feeding skimmilk, shorts, alfalfa and roots, or blood or fish meal. Finish the pig when grown on barley, oats, and corn. Mature bacon hogs are finished weighing 200 to 210 pounds at six to seven months of age. A few extra dollars invested in the boar will often save a good many bushels of grain when finishing your hogs for market, and will get the farmer better prices.

A Sun Subscription Offer

The next three months will be months of absorbing interest to the electors of Ontario. Never before in the history of the Province was there as much political confusion and uncertainty as there is to-day; never before was it so necessary that electors should understand the point of view of those with whom they differ.

The Farmers' Sun during the coming campaign will endeavor to give its readers a full and impartial record of events and to those who hold to the principles it supports, as well as those who may support other principles but who wish to be well informed, it offers a special subscription opportunity. The Sun will be sent to any address in Ontario for three months for fifty cents, or six months for one dollar. You may send your subschiption by Postal Note or Express Order to the Sun Office, or through the courtesy of your local paper.

The Farmers' Sun

109 GEORGE ST. - - TORONTO

SHEEP

A choice lamb brings the top price. It possesses the form, quality, condition and weight demanded by the dealer in high-class meats. Such a lamb shows the most development in the loin, back and leg. These are the parts from which the high-price cuts are obtained. Other indications of good form are depth and breadth of body, denoting blockiness, and absence of paunchiness and roughness which might indicate waste. Short legs and neck are usually associated with the ideal form.

"Quality" is one of the most important factors, according to the department of agriculture, in determining the value of fat lambs as it indicates the grade of quality of the meat. Other factors being equal, it also indicates probable yield and freedom from waste. General quality is indicated by a medium-sized, clean-cut head, ears of fine texture, fine bone and full, well-rounded outlines indicating a thick, even development of firm flesh.

Quality in the flesh of a lamb is very largely dependent upon the condition. Condition indicates the degree of finish or fatness. A finished lamb yields a larger percentage of meat and a more attractive carcass than does a thin lamb. The meat has a better flavor and is more palatable. Good condition of flesh in the live lamb is indicated by thickness and firmness along the back, at the loins, over the sides, and on the legs. In addition to being firm there should be enough springiness to the flesh for it to yield slightly to the touch. Condition is determined by feeling the thickness of the back, loin, dock, and leg, as it cannot be determined by sight alone.

The ideal weight in lambs is from sixty-five to eighty pounds, although the preferred weight varies slightly with the season. Lambs weighing near the top of this range probably are in greater demand during the summer months because of the heavier chops which they yield.

Common or cull lambs are decidedly lacking in the conformation, condition and quality which killers demand when they are buying to meet the wants of discriminating consumers. Coarse, angular lambs commonly belong to this grade, but not unless they are noticeably lacking in quality of flesh and amount of fat. Lambs grading common or cull include those weighing from thirty to fifty pounds and all the animals known as coarse, "bucky" lambs which may weigh as much as 100 pounds, and which are the result of careless methods on the part of growers. Male lambs which are not castrated early will become coarse when the sex instinct develops and will lose flesh and fat as the result of fretful activity; hence they sell at a discount on the market.

Top market lambs can not be produced without using good breeding stock, and giving the flock the proper care and attention before and after lambing. All lambs should be docked and male lambs castrated when seven to ten days of age if it is desired to obtain the premiums which the trade is ready to offer for the best lambs.

Canadian Live Stock Market.

Top prices for steers, calves, hogs and lambs were reported by the Dominion Live Stock Branch for the week ending March 28, to have been as follows: Steers, Toronto, $7.75; Montreal, $7.50; Winnipeg, $6.60; Calgary, $6.25, and Edmonton, $6.50. Calves, Toronto, $14; Montreal, $9; Winnipeg, $10; Calgary, $5; Edmonton, $9. Hogs, Toronto, $11.82; Montreal, $11.25; Winnipeg, $10.45; Calgary, $9.73; Edmonton, $10.45. Lambs, Toronto, $15.50; Montreal, $11.50; Winnipeg, $12.50; Calgary, $11.50, and Edmonton, $10.50. It must be remembered that these are top prices, averages, being let down by animals not the very best, running considerably lower, but at that they generally reached quotations of the same date last year, and in some cases were rather better. Up to date this year sales of cattle and calves at the five principal markets in Canada have been more by 40,000 heads than during the corresponding period of last year. Hogs and sheep also show increases; hogs, by one hundred thousand and sheep of five thousand.

The most that you will get out of a poorly-arranged barn is plenty of exercise.

Now Is the Time to

Throw open the windows of your house and barn and let in the good fresh air.

Use the stone boat. You know what it is for.

Remember the proverb that "an alfalfa field is a hog's idea of heaven."

Look out for clogged ditches. Clean them out, so they won't overflow.

Paint your buildings. Clean up generally and make the place look inviting.

Screen your home. Make or buy screens and live comfortably. Flies are disease carriers.

Plant a woodlot. This is a good time to do it. Consult your nurseryman about varieties to grow.

How We Poison Cutworms.

When cutworms get hungry and go to chewing off our garden plants, we offer them a substitute. We mix a quart of bran with a heaping teaspoonful of Paris green and a quarter of a teacupful of molasses, and add enough water to make a mash, crumbly but not sloppy. We scatter it thinly between the rows where the cutworms work, or put a little at the base of each plant. It usually gets them. Chickens must be kept out, or they will be poisoned too.—C. S. B.

Home Garden Collection

Half pound Corn, half pound Peas, half pound Wax Beans and 12 assorted packages Vegetable Seeds, postpaid for $1.00.

These are all tested stocks. Write for this collection and our attractive calendar to-day.

KENDALL'S SPAVIN TREATMENT

Keep Kendall's always in the barn. A strained muscle, a sprung tendon, a jolt or a knock demands immediate attention. A few hours' delay will result in a long lameness—perhaps in the loss of the horse. Kendall's Spavin Treatment has saved more horseflesh than all the other known remedies. Under the name of Kendall's Spavin Cure, it is the forty-year-old standby of horsemen, farmers and veterinarians.

Get a bottle of Kendall's today. Ask, too, for the Free Book or write for it to

DR. B. J. KENDALL COMPANY, ENOSBURG FALLS, Vt., U.S.A.

NOTICE OF DISSOLUTION OF PARTNERSHIP

Notice is hereby given that the partnership heretofore subsisting between us, the undersigned, as operators of an automobile garage and repair shop, in the Village of Morrisburg, in the County of Dundas and Province of Ontario, under the name and style of Harback and Barr has this day been dissolved by mutual consent.

All debts owing to the said partnership are to be paid to John A. Harback, at Morrisburg aforesaid, and all claims against the said partnership are to be presented to the said John A. Harback by whom the same will be settled.

Dated at Morrisburg aforesaid this first day of May, A.D. 1923.

JOHN A. HARBACK,
ANDREW M. BARR.

GLEN BECKER

Born, to Mr. and Mrs. George Hess, on Monday, April 23rd, a daughter.

Mr. and Mrs. Merton Saddlemire and children spent Monday evening last at Leonard W. Barkley's.

Mrs. Cephrenus O'Shaughnessy and the Misses Gretta and Ileen were visitors at Charles Watson's on Sunday.

Mrs. Frank Powell and Miss Beatrice Saddlemire spent Saturday afternoon at Williamsburg.

Mr. and Mrs. Stanley Saddlemire and Miss Lila were Sunday guests at Wm. I. Merkley's.

Mr. and Mrs. Mason Barkley spent Sunday last at Summerstown with Mrs. Barkley's mother, who is ill at present.

Mr. and Mrs. Harry Bowman and W. Fraser were Sunday visitors at Walter Saddlemire's.

Mrs. J. M. Casselman is spending this week with her daughter, Mrs. Iden Whitteker at Elma.

Mr. and Mrs. Dalton Saddlemire and family and Mrs. Meredith Garlough and baby spent Sunday at Walter Watson's, East Williamsburg.

Mrs. Walter Saddlemire spent one day this week at her home in East Williamsburg.

FROATBURN

Mr. and Mrs. Morley Bowman and son Grant spent Sunday at Mr. Stanley Saddlemire's, Glen Becker.

Miss Gillard was a recent visitor at her sister's, Mrs. Lagora Millward.

Mr. and Mrs. Sterling Dillabough and baby spent Friday at Mr. Jack Lane's.

Visitors at Ralph Swerdfeger's on Sunday were the Messrs. Charlie Saddlemire and Hubert Casselman.

Mr. and Mrs. Jake Swerdfeger, Mr. and Mrs. Mark Fetterly and daughter were callers in the Burn on Tuesday evening.

Mr. and Mrs. Jefferson Swerdfeger spent Sunday at Mr. Thomas Black's.

Mr. and Mrs. Lagora Millward and baby spent Monday at Mr. Tommy Millward's.

Mr. and Mrs. William Henophy was calling in Froatburn on Sunday.

Mr. and Mrs. Broder Millward were visiting at the latter's parental home on Sunday.

Mr. and Mrs. Simeon Swerdfeger spent one day last week the guest of Mr. Malcom Froats.

Mr. and Mrs. Roland Froats spent Sunday with friends in Glen Becker.

Mr. and Mrs. George Beckstead of Aultsville spent one day recently at Mr. Hugh McHaffie's.

Mr. and Mrs. Roy Schell and family spent Sunday at Mr. Stanley Forward's, Williamsburg.

Mr. and Mrs. George Dillabough spent Sunday with their son, Mr. Sterling Dillabough.

BRINSTONS

We welcome Mr. and Mrs. Andrew Riddell to our hamlet this week.

Mr. and Mrs. Allan and Mrs. C. Allan of Cardinal spent Sunday with the latter's daughter, Mrs. Harry Cook.

Rev. Dr. and Mrs. Cooper of Cardinal visited the former's aunt, Mrs. Thos. Hamilton one day last week.

The Beach Electric Co., of Iroquois are holding a demonstration here this week in connection with electricity. Good crowds are attending the meetings.

Married—At the Methodist Parsonage, on Wednesday evening, April 25th, by Rev. W. R. Johnston, Mae Moorehead of Dixons Corners, and Harold Snider of Kingston — Congratulations

Last week while working on the electric line here in town, Jack Dishaw, lineman, of Iroquois had a miraculous escape from being killed, when he touched a live wire and was thrown to the ground about 40 feet, falling on his head and shoulder. His foot and leg were badly burned, but he sustained no internal injuries. When picked up he was unconscious. Drs. Collison and Miller of Iroquois were called and Mr. Dishaw was taken to his home in Iroquois, where, we are glad to report, he is gaining nicely.

Mr. R. E. Armstrong has returned to Ottawa after spending the winter with his daughter, Mrs. (Rev Johnston.

Mr. and Mrs. Howard Wylie and children of Toyes Hill visited her mother, Mrs. A. Riddell on Tuesday.

BY-LAW NO. 444

A By-law for granting a bonus to The Morrisburg Lumber Mills by way of fixing the assessment of the property owned and used by the said The Morrisburg Lumber Mills for manufacturing purposes.

WHEREAS it is expedient in the interest of the municipality to grant the bonus hereinafter mentioned for the promotion of manufactures in the municipality.

BE IT THEREFORE ENACTED by the Municipal Council of the Corporation of the Village of Morrisburg as follows:

1. For the purpose mentioned in the preamble the property now owned by Frank Fentiman and William Bennis Killins carrying on business under the name and style of The Morrisburg Lumber Mills, being lots numbers twelve, thirteen and fourteen in block number thirty-nine in the said Village of Morrisburg according to the registered map of said village made by Walter Beatty, P.L.S., and any other property hereafter purchased and owned by the said The Morrisburg Lumber Mills during the period of years hereinafter limited shall be assessed at not more than the sum of One Thousand Seven Hundred Dollars during the period of ten years from the first day of January, A.D., 1923, provided the said The Morrisburg Lumber Mills use all of the said property for manufacturing purpeses during the whole of the balance of said period of ten years as hereinafter mentioned; but this By-law shall not apply to or affect taxation for school purposes or local improvements.

2. The said The Morrisburg Lumber Mills shall enter into a contract with the said Corporation, at the time of the final passing of this By-law, covenanting to carry on for the balance of the said period of ten years upon the said property the manufacture of sash, window frames doors, blinds, mouldings, brackets, turnings, hardwood flooring, sheathing, V Joint, Rustic, Feather Edge, Silos and other manufactures of wood or other manufacturing industry; and also covenanting to employ from twelve to twenty workmen in the said manufacturing industry immediately after the expiration of one year from the final passing of this by-law and shall, where practicable, employ such workmen from residents of this municipality.

3. This By-law shall take effect on the day of the final passing thereof.

4. This By-law shall be finally considered by the Municipal Council of the said Corporation, and if the same shall be assented to by the electors, shall be then passed on Monday the 21st day of May, A.D., 1923, at the hour of eight o'clock in the afternoon.

By-law read a first time in open Council, this 18th day of April A.D., 1923.

F. R. CHALMERS,
Clerk.

By-law read a second time in open Council, this 18th day of April, A. D., 1923.

F. R. CHALMERS,
Clerk.

Take notice that the foregoing is a true copy of a proposed By-law of the Corporation of the Village of Morrisburg to be submitted to the votes of the electors on the 12th day of May, A.D., 1923, between the hours of nine o'clock in the fore noon and five o'clock in the afternoon at the following places:

Polling Sub-division No. 1—At the Town Hall.

Polling Sub-division No. 2—At the East Public School Building.

Polling Sub-division No. 3—At Mrs. Henderson's Coach House.

And that the 11th day of May, A. D. 1923, at ten o'clock in the forenoon, at the Clerk's office, in the said municipality, has been fixed for the appointment of persons to attend at the polling places, and at the final summing up of the votes by the Clerk.

And that if the assent of the electors is obtained to the said proposed By-law it will be taken into consideration by the Municipal Council of the said Corporation at a meeting thereof to be held after the expiration of one month from the date of the first publication of this notice, and that such first publication was made on the 20th day of April A.D., 1923.

F. R. CHALMERS,
Clerk.

NOTICE TO CREDITORS

In the matter of the estate of Edward McLaughlin, late of the Village of Morrisburg, in the County of Dundas, Physician, deceased.

Notice is hereby given pursuant to section 56 of The Trustee Act (R.S.O. 1914, Chapter 121) that all creditors and others having claims or demands against the estate of the said Edward McLaughlin, who died on or about the 17th day of April, A.D. 1923, are required on or before the 28th day of May, A.D. 1923, to send by post prepaid, or deliver, to the undersigned, the Solicitor for Robert Edward McLaughlin and Peter Harvey McLaughlin, the Executors of the said estate, their Christian names and surnames, addresses and descriptions, the full particulars of their claims, a statement of their accounts, duly verified, and the nature of the securities (if any) held by them.

And take notice that after such last mentioned date the said Executors will proceed to distribute the assets of the said deceased among the parties entitled thereto, having regard only to the claims of which they shall then have notice, and that the said Executors will not be liable for the said assets or any part thereof to any person or persons of whose claims notice shall not have been received by them at the time of such distribution.

Dated the 26th day of April, A.D. 1923.

R. F. LYLE,
Morrisburg, Ont.
Solicitor for said Executor.

"My Heart Would Palpitate, I Had Weak Spells"

Mrs. L. Whiting, 202 King St. West, Brockville, Ont., writes:—

"I took very sick with my nerves and stomach, and seemed to be all run down. At times my heart would flutter and palpitate so and I would take such weak spells in the pit of my stomach, that I sometimes thought I would never get better. I had almost given up hope when a friend advised the use of Dr. Chase's Nerve Food. I did not stop until I had taken twenty-five boxes. It has done wonders for me and I want to recommend it to everyone."

TWENTY THOUSAND FRENCH REINFORCEMENTS RUSHED TO SYRIA

Paris, April 29.—France is sending more troops to Syria to hold the mandated territory against any possible aggression by the Turks. A considerable number of French colonials have quietly embarked and are on their way to Syria, and two divisions, totalling 20,000 men, it is reported, have been decided upon as probable reinforcements to be sent, so as to give General Weygand a sufficient army.

France now has 26,000 men in Syria, but the northern front is about 200 miles in length and a Turkish army corps of 20,000 is concentrated there, with additional forces on their way.

The announcement of French military preparations was made after Premier Poincare's two-hour talk this morning with General Pelle, the French High Commissioner at Constantinople, who first went to Lausanne and then came to Paris for a conference with the Premier on the general situation and for a discussion with General Weygand on the military plans. President Millerand later received General Pelle, who gave the President full information of conditions.

The Government, without divulging the details of its future Syrian policy, simply let it be known through a semi-official channel that, because of the massing of Turkish forces across the border from the French, "the despatch of fresh contingents of French troops from the colonial forces is considered necessary."

The military measures, it is understood, have been taken only as a precaution, for General Pelle brought from Lausanne a report of his long talks with Ismet Pasha, which the French consider more encouraging than Ismet's attitude in the conference.

The French Government, nevertheless, takes the stand that the Turkish troop concentration looks like a threat, even if the Turks do not intend a military offensive, and in any case it is regarded as a distinct effort to exert pressure on the French, which is considered intolerable. The situation in Syria was described to-day in Government circles as at least "disquieting."

General Weygand will sail from Toulon Thursday or Friday aboard the battleship Lorraine for Beirut, the chief seaport of Syria, to take command of the situation there, as he succeeds General Gouraud as French High Commissioner in Syria and Commander of the army in the East.

Hon. Dr. Beland

He has introduced a bill into the Commons with the object of wiping out the drug traffic in Canada. The bill was rejected last year by the Senate, but is now re-introduced. One clause provides that persons convicted of dealing in drugs will not have the right of appeal.

PRINCE OF WALES UNVEILS WAR MEMORIAL

Memorial Erected in Brussels by British People as Symbol of Gratitude.

Brussels, April 29.—Anglo-Belgian wartime associations were vividly recalled on the occasion yesterday of the Prince of Wales unveiling, in front of the Palais de Justice, the monument which was erected by the British people in honor of Belgium's effort in the war. The population lacked nothing in enthusiasm. Dense cheering crowds lined the streets, which were ablaze with bunting and Belgian and British flags.

The climax of the excitement came when the Prince of Wales, accompanied by King Albert, arrived at the Palais, which was resplendent with uniforms and flags. Above the stir attending the ceremony could be heard the droning of aeroplanes in a cloudless sky.

Crowds thronged inward as the Prince of Wales pulled a cord releasing the intertwined British and Belgian colors, revealing the magnificent monument. The massed bands played the National Anthem while the Prince of Wales stood at salute, after which, in a short address, he presented the monument to King Albert as a symbol of British gratitude for Belgian assistance in the war.

King Albert, in reply, spoke of the indelible memories of the war, cementing the friendship of the two countries. Especially he referred to the British soldiers as "incomparable warriors, who turned the Ypres salient into an unshakable bastion of the allied lines and illustrated the heroism of their race."

New Life Preserver.

Including a collar to keep a wearer's head erect, a new life preserver resembles a sleeveless coat and is so worn.

HEBRIDEANS LAND TO SKIRL OF BAGPIPES

Three Hundred Islanders Arrive in Canada to Take Up Farms in Alberta.

St. John, N. B., April 29.—To the merry skirl of the pipes, the Hebrideans who left their native land on the steamer Marloch, to seek their fortunes in the new world, stepped briskly down the gangway this morning and marched from the dock to the immigration sheds. There they were formally welcomed to Canada by Mayor Fisher, of St. John.

The large group of Scots who came to St. John to-day, the first group of Britishers to come here in years as a body, was most favorably commented on by local people, who watched the debarking. They are in charge of Rev. John MacMillan, who will remain with them at Red Deer, Alta., their destination, as pastor, and Rev. Alexander J. Gillies, who will, when the party are finally located, return to the Hebrides. They were welcomed at the pier by Rev. Andrew MacDonell, formerly of Invergarry, Scotland, who is now located in Ontario, and who brought here several parties from the Old Land.

The Hebrideans comprise 198 adults, 83 children and 7 infants. All those of school and adult age are fairly well educated, and are experienced in operating small farms and in fishing. The women are experts in the manufacture of all kinds of clothing, from the forming of wool into yarn to the fashioning of the finished product, all by hand. Samples of their work show that the women are very skillful.

South Uist, Banboula and Barra are the native places of the majority of the party.

They are nearly all well supplied with funds, many having a thousand pounds sterling to the family.

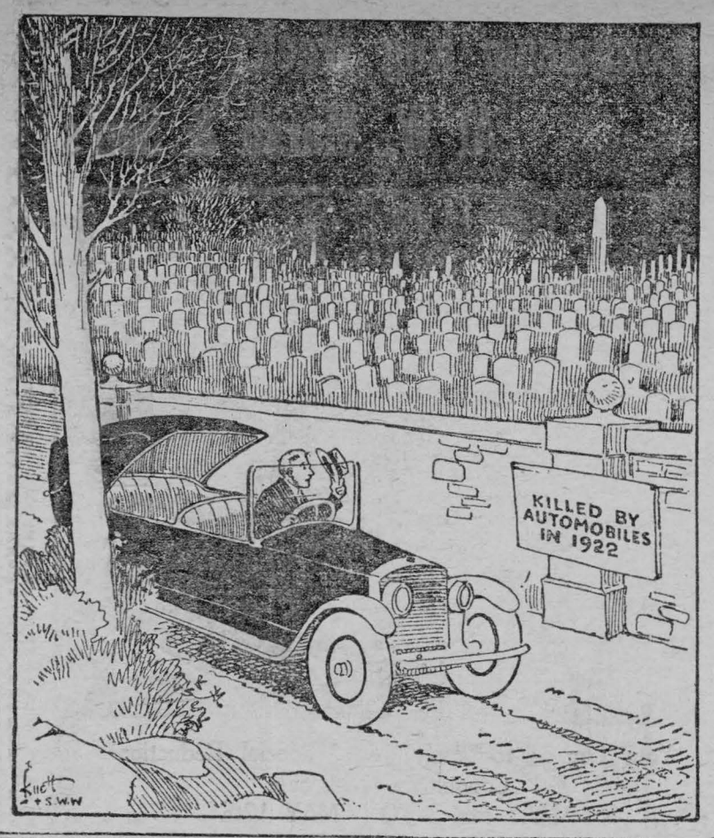
Rev. John MacMillan, speaking of the Hebrideans, said that small farms, averaging from ten to thirty acres are the land areas with which the Hebrideans are familiar. In addition, they carried on common pasturage operations. Their stock consisted of from two to eight cattle and ten sheep.

Mr. MacMillan emphasized one point in his conversation. It was that the Hebrideans did not propose to give up Gaelic. They would retain their own language, as well as speaking English, he said. He hoped that they would soon have at Red Deer their own church and school.

Be warned against nursing revengeful thoughts; they are apt to develop sharp stings.

A new cement company, to be known as the National Cement Co., has been incorporated with Federal charter and headquarters in Montreal. The plant of the new company will have a capacity of 3,000 barrels a day, and will be built of reinforced concrete at an approximate cost of $1,800,000. The estimated output of the plant will be about 900,000 barrels a year. Construction of the mill will be commenced about May 1 of this year and will probably take about nine months to complete.

WHEN TEMPTED TO SPEED UP, THINK OF THESE



TRADE OF CANADA MAKES BIG ADVANCE

Exports Show Largest Gains in Year's Record of Increase.

A despatch from Ottawa says:—During the fiscal year ended March 31, Canada's total trade increased nearly a quarter of a billion dollars. Total trade during the year was $1,748,530,880, an increase over the previous year of $246,840,887. Export trade developed to the greater extent.

For the 12 months exports of Canadian merchandise were $932,229,443, or $191,988,763 over the previous year; imports were $802,457,043, an increase of $54,694,059. Foreign merchandise was exported to the value of $13,844,394.

Among Canada's domestic exports, agricultural products, with a value of $383,425,251, ranked first. Next came wood, wood products and paper, valued at $228,756,205.

Canadian exports during March increased to $78,566,675 from $58,646,312 in February. Exports in March of 1922 totalled $60,847,484. Dutiable imports into Canada during March totalled $61,619,994, and free imports were $30,250,433, a total of $91,870,427, compared with $65,307,696 in February, and $72,378,726 in March last year.

Bonar Law Takes Month's Sea Voyage

A despatch from London says:—It is announced that Premier Bonar Law, with the permission of the King, is leaving immediately for a month's sea voyage.

Official word from Downing Street says his medical advisers insist there is every reason to believe the Premier's voice will be restored completely at the end of the month. The destination of his voyage is not revealed.

Ismet Pasha

Turkey's representative at the new Lausanne conference, who continues to make impudent demands of the allied powers. He is Kemal's Foreign Minister.

If you want to give anyone a bit of advice, manage first to make him want it.

DE VALERA ISSUES TERMS FOR PEACE

Republican Leader Has Ordered Suspension of Hostilities in the Meantime.

A despatch from Dublin says:—A suspension of hostilities by the Irish Republicans against the forces of the Free State Government, and an offer to negotiate peace with the Free State on certain conditions were proclaimed on Friday night by Eamon de Valera, the Republican leader, and his Chief of Staff, E. F. Aitken.

De Valera's proclamation sets forth the general political principles of the Republicans and asserts that the ultimate Court of Appeals for deciding disputed questions is a majority vote of the people of Ireland, that resistance by violence should be excluded, but that adequate facilities should be afforded the people for the proper presentation of the issues involved.

The proclamation adds that nobody holding Republican principles should be excluded from Parliament and the council of nations. It says the military forces are servants of the nation and amenable to a freely elected national assembly.

De Valera expressed the belief that this declaration affords a basis for peace, and adds:

"We hope this advance will be met in the spirit in which we make it, and that it will be supported by all who love our country and desire a speedy and just ending to the present national troubles.

"As evidence of our own good will the army command is issuing herewith an order to suspend aggressive action, to take effect as soon as may be, but not later than noon of Monday."

The effect of this proclamation is still doubtful. De Valera all along has declared his willingness to abide by a decision based on the free will of the people; but he is said still to maintain his original position that the British Government must not interfere in Ierland if the people decide in favor of a Republic.

Chief of Staff Aitken in his order for a cessation of offensive operations tells the Republican troops to remain on the defensive and protect themselves and their munitions. This is taken as implying that there is to be no yielding on the part of the Republicans to the Free State Government's demand for the surrender of all arms.

The world's record for speed among passenger vessels is held by the White Star liner Olympic. On a recent passage from New York to Cherburgh she maintained for several hours a speed of 27.81 knots. The best previous performance was 27.5 knots, logged by the Mauretania.

One hundred and forty thousand Canadian boys have been organized by the Canadian Forestry Association into a Young Canadians Forest League and will be on the alert this year to prevent forest fires in all parts of the Doimnion. Badges and detailed instructions are being supplied and the entire body will act as an auxiliary force to the fire rangers when occasion offers.

FLOOD SUBSIDING ALONG ASSINIBOINE

Removal of Ice Jam by Government Corps Brings Relief to Manitoba.

A despatch from Winnipeg says:—Flood conditions in central and southern Manitoba, which caused great havoc during the past week, inundating thousands of acres of farm lands, disrupting transportation, forced families from their homes, isolated others from towns and turned low lands in many sections of the province into huge lakes, are now on the wane and the situation generally is much improved. Along the Assiniboine River, where extensive damage has resulted, the floods at Brandon, Portage La Prairie and territory to the east, the removal of ice jams by Government engineering corps has relieved the situation considerably and with the river comparatively free of ice, the water is receding. Many thousands of acres of land in the Popular Point District, about forty miles west of this city, are still under water, but with the river now free of ice, the water is expected to flow back from the flooded areas rapidly.

Airplanes Pick Up Mails at Plymouth

A despatch from Plymouth, England, says:—The Plymouth Chamber of Commerce on Friday inaugurated a time-saving experiment in picking up the urgent mails dropped from incoming liners in Plymouth Sound. Dummy mail dropped overhead at six o'clock Friday morning was taken ashore in a fast motor launch and transferred to airplanes, which left for Cologne and Paris, arriving in those places at approximately three and four o'clock Friday afternoon.

The use of this scheme, it is contended, would enable the delivery of lettrs to business houses in time for the replies to catch the return air mails the following morning and reach Southampton for the mail boat that evening. The Air Ministry is said to be watching the experiment with great interest.

Pleads for White B.C.

John Nelson, a Vancouver newspaper owner, who declares that unless Canada takes swift action against Oriental immigration to British Columbia, the boundary between Canada and Asia will not be the Pacific Ocean, but the Rocky Mountains. Less than 100 years ago the first white man saw B.C., he says, and in less than another 100 years the last white man will look upon it unless something is done.

Spend Millions on Grain Elevators in the West

Winnipeg, April 29.—Optimistic of the future of the west and crop conditions for the year 1923, elevator companies of the three prairie provinces are constructing 200 or more country elevators this spring and summer. This will entail an expenditure of nearly $2,250,000 with $1,000,000 being spent in lumber alone. Construction companies and lumber men of Winnipeg have many orders already in hand and expect to start on their fulfilment in the immediate future. In the neighborhood of $6,000,000 will be spent at the head of the lakes this year in construction of new terminal elevators and enlargement to old ones.

Mountain peaks 1,630 feet high have been discovered under the sea 100 miles off the Californian coast.

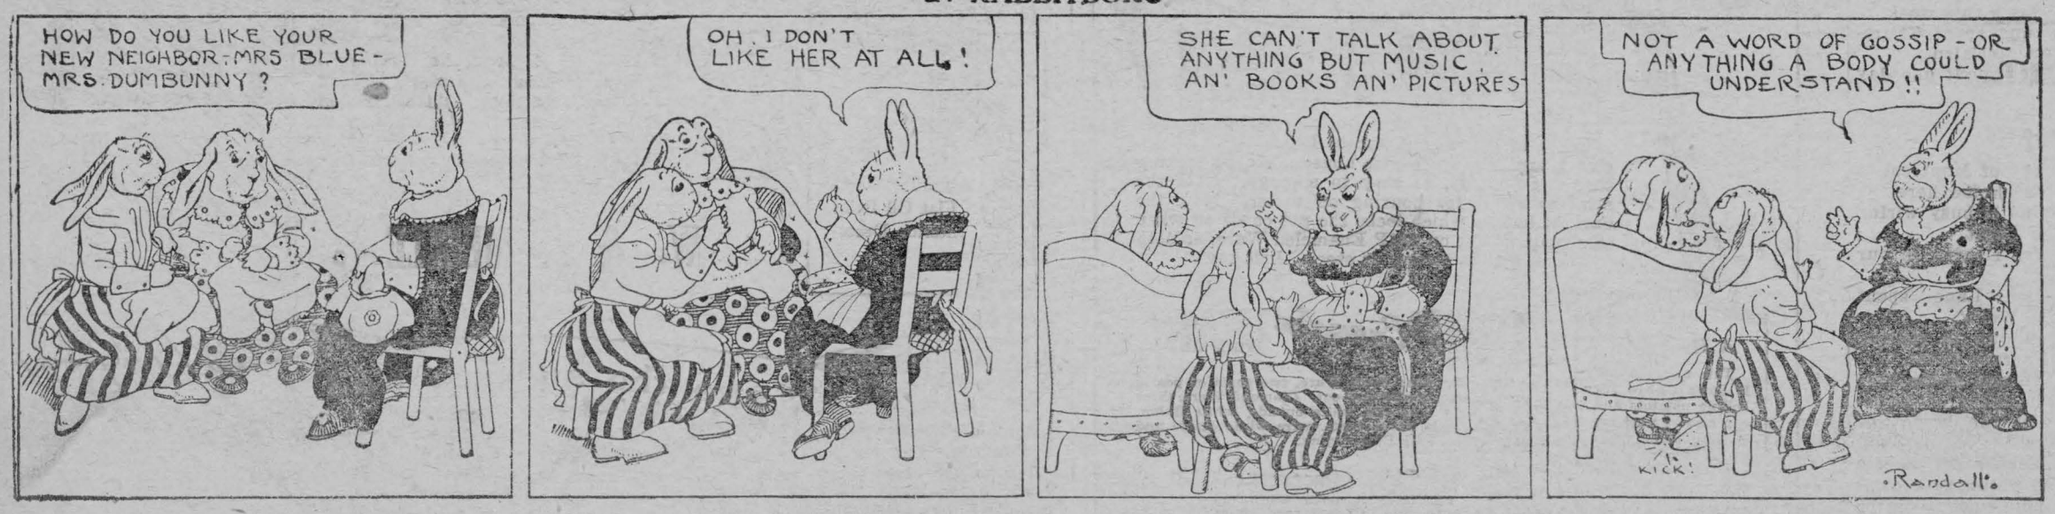
IN RABBITBORO



PALE FACES AND WORN OUT NERVES

Due Solely to Weak, Watery Blood—A Tonic is Needed.

Anaemia — literally impoverished blood—comes on so stealthily that it is often well advanced before its presence is recognized. Feelings of fatigue and discomfort are the earliest manifestations of the trouble and these are seldom taken seriously. Gradually small tasks become an effort and exertion causes the heart to palpitate violently. The complexion becomes sallow or pale and there is loss of weight. The nerves grow weak and the victim displays irritability under slight provocation and is extremely sensitive to noise. The appetite is fickle and indigestion often follows.

A condition of anaemia calls for a tonic, one that will enrich the blood and strengthen the nerves, and for this purpose there is nothing can equal Dr. Williams' Pink Pills. These pills give the blood all those missing elements necessary to give strength to the nerves, color to the cheeks, and nourishment to starved organs and tissues. Miss Margaret J. Fraser, R.R. 2, Thessalon, Ont., has proved the value of this treatment. She says: "I was very pale and weak. My blood was poor and I was very nervous. I lost my appetite, my feet and ankles were swollen and I was in a very miserable condition. A friend advised me to try Dr. Williams' Pink Pills and I got two boxes, and found before they were finished that they were helping me. I continued the pills until I had taken a half dozen boxes, with the result that I am now enjoying the best of health, all symptoms having disappeared. I feel confident that what Dr. Williams' Pink Pills did for me they will do for others, if given a fair trial."

You can get these pills from any medicine dealer or by mail at 50 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

Soon One May Talk Across the Ocean.

Now that the British Government has appointed a notable committee of experts to act in co-operation with American experts in investigating the problem of wireless telephony over long distances and especially to make wireless telephony a commercial possibility between America and Gt. Britain, there are some enthusiasts here who see the day not far distant when passengers on the Atlantic highway can keep in touch with business interests on both sides of the big pond during the whole six days of the voyage, says a London despatch.

Much of the mystery of ocean travel, they argue, then will be over for the Atlantic lane will be the objective of telephonic communication from both sides. What is adding to the enthusiasm of veteran travelers too, is the possibility of being regaled with broadcast concerts from both sides of the water while a ship is at sea.

It remains to be seen whether British shipping lines will follow the example of having ocean going Follies as planned for the Leviathan. The French already have promised to provide theatrical troupes for some liners going to South America.

What evidently is stimulating the British seriously to take up wireless telephony is the success achieved in the United States. About two months ago attention was centred on wireless telephonic possibilities when the American Telephone and Telegraph Company and the Radio Corporation of New York through the Western Electric Company sent a message of considerable length at a pre-arranged time which was clearly audible to a big audience in London.

What also has centred public attention on the matter of communication with America is the frequency with which broadcast concerts from America are clearly heard here, including the Yankee "twang," as it was described. At one of the big stations where an American jazz band concert was heard recently it was said later that there was no mistaking where it came from as the announcer had a nasal voice.

Fairy Music.

When the fiddlers play their tunes,
you may sometimes hear,
Very softly chiming in, magically clear,
Magically high and sweet, the tiny
crystal notes
Of fairy voices bubbling free from tiny
fairy throats.

When the birds at break of day chant
their morning prayers,
Or on sunny afternoons pipe ecstatic
airs,
Comes an added rush of sound to the
silver din—
Songs of fairy troubadours gaily joining in.

When athwart the drowsy fields summer twilight falls,
Through the tranquil air there float
elfin madrigals,
And in wild November nights, on the
winds astride,
Fairy hosts go rushing by, singing as
they ride.

Every dream that mortals dream,
sleeping or awake,
Every lovely fragile hope—these the
fairies take,
Delicately fashion them and give them
back again
In tender, limpid melodies that charm
the hearts of men.

—Rose Fuleman.

Heat and Life.

We often speak of our bodies as machines or engines working upon principles similar to those employed in mechanics. The idea that the food we eat resembles in its action the fuel supplied to a furnace is familiar, and yet one can hardly avoid a little start of surprise upon learning that the laws of heat engines are soberly applied to explain the growth of plant and animal life.

This has been done in a most interesting way by a British scientist before the Philosophical Society in London. He points out, for instance, that the increase of available energy resulting from the building up of a plant out of inorganic substances can only be explained, in accordance with thermodynamic laws, by differences of temperature during the growth of the plant, and his calculations show that the difference between day and night is quite sufficient to account for the differences of temperature required.

Similar principles apply to the growth of animals. Nature gives nothing for nothing, and demands an exact equivalent for every expenditure of her energies, whether she is aiding man to drive an engine, causing an oak to grow or building up the muscles of an athlete or the brain of a philosopher. And as far as her work upon the planet is concerned the source of her supplies in all these cases is the sun.

No Repentance Now.

Mother—"Let me warn you, my dear, against an ill-considered marriage. 'Marry in haste—' "

Daughter—"Yes, mother; but now it's repeat at leisure," you know.

He Hadn't Earned the Right.

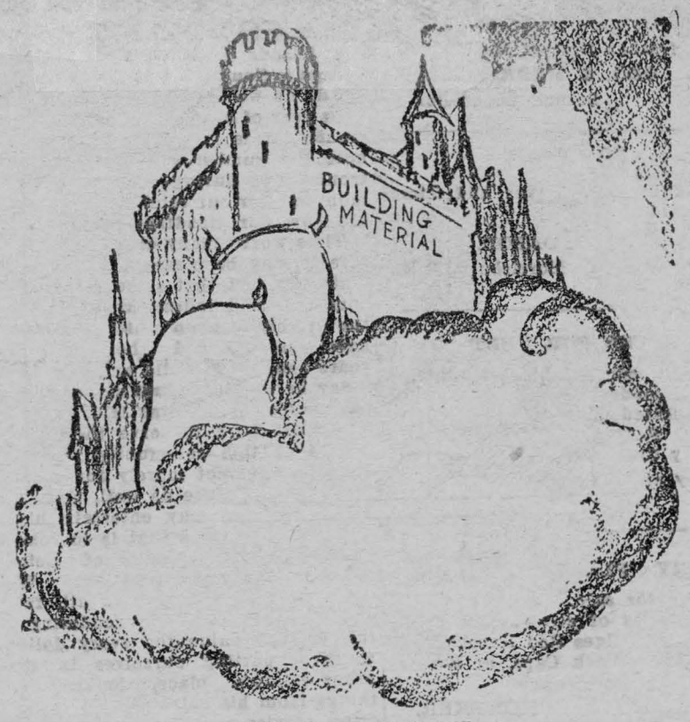
The friend of a certain captain of industry once applied to the great man for a job for his son, just out of college.

"He's a bright, honest, modest young man," said the proud father, if I do say so myself."

"Modest?" snorted the industrial captain. "What has he ever done to be modest about?"

When two men quarrel there is one fool present.

It is not what you get out of life, but what you give, that makes you happy.—Rev. P. T. B. Clayton.



CASTLES IN THE AIR

—From the St. Louis Post-Despatch.

BABY'S OWN TABLETS ALWAYS IN THE HOME

Once a mother has used Baby's Own Tablets for her little ones she always keeps a supply on hand, for the first trial convinces her there is nothing to equal them in keeping children well. The Tablets are a mild but thorough laxative which regulate the bowels and sweeten the stomach, thus driving out constipation and indigestion, colds and simple fevers and making teething easier. Concerning them, Mrs. Saluste Pelletier, St. Dumas, Que., writes:—"I have used Baby's Own Tablets for the past ten years and am never without them in the house. They have always given the greatest satisfaction and I can gladly recommend them to all mothers of little ones." The Tablets are sold by medicine dealers or direct by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

Human Sacrifice Offered Rain God.

A story almost incredible to European ears of the savage man's faith in human sacrifice to propitiate the weather god has just been received from Rhodesia, writes a correspondent to "The London Daily News."

Following continued drought, an unfortunate native was seized, bound and publicly burned to death as an offering to the Rain God. A tragic coincidence was the almost simultaneous breaking of the drought, and this, of course, despite the fact that sixty-three men have been arrested on a charge of murder in connection with the affair, is the surest guarantee that a custom which has already sent some seventy unfortunate men to a horrid death will be continued.

For some time past the elders of the Mtawara tribe, alarmed at the long drought and the poor crops, following a season of famine, have been holding councils led by a "rain doctor." The outcome of these councils was a decision to offer to the Rain God Mwari something which had never failed to earn his favor—a human victim burned before a suppliant people.

Select a Human Victim.

The elder's choice fell upon a native named Mtegedt, whose preference for one of his fellow tribesmen's wives had been noted and resented. The fact that the man was a brother of the injured husband and a son of the "rain doctor" did not save him.

The chief's approval having been given, a number of natives were sent to secure the victim, and a sacrificial pyre was prepared. The man, Mtegedi, was captured, bound, and dragged to the pyre, around which a great crowd of natives had assembled.

The doomed man struggled violently, but a whole people were against him, and he was thrown into the flames.

Then followed the strange, uncanny coincidence referred to. Life had hardly left Mtegedi when the weather broke. Rain fell heavily, and has continued for several days.

The natives prostrated themselves before the Rain God, and a barbarous custom, which has already gone on for years will continue so long as the tribe has a man left to carry it out.

Following the rain great rejoicings took place. These were still in progress when two police troopers from the Mount Darwin Police camp, forty miles to the south, arrived.

Several terrible relics of the sacrifice were found, and in the end sixty-three men of the tribe were arrested on a charge of murder.

Some of the natives told the officers of several other previous sacrifices, and the Paramount Chief, Chiswiti, when brought to the police camp, declared that within his own memory, seventy-two natives had been burned in this district to propitiate the spirit which is supposed to send the rain.

Robert Burns committed his poems to memory as he composed them. When he sat down to write he had no labor of composition, but only the task of writing down what he had already finished.

Minard's Liniment used by Physicians.

The positive, constructive man, the progressive man, does not talk and think negatives. He does not say "I can't"; it is always "I can"; he does not say "I will try to do it," but "I will do it."

"Cant's" have ruined more people than almost anything else.

It is a dangerous thing to get into the negative habit, the doubting habit, the "I can't" habit.

It tends to keep people down. They are fastening bonds of servitude around themselves, and in later life will not be able to counteract their influence unless they reverse their thinking, talking and acting.

Discovers Way to Intensify Perfume of Flowers.

Intensifying the perfume of flowers is the latest horticultural experiment in France, says a Paris despatch. Results achieved by Prof. Daniel, of the University of Rennes, were presented here yesterday before the Academy of Sciences and declared to open up a new field allowing hitherto undreamed of possibilities for perfume makers.

By grafting a shoot of wormwood on a chrysantheum it was found the odor of the chrysanthemum was greatly intensified. From the seeds of the graft splendid plants were obtained the following year, which produced flowers. Some of the blossoms had powerful perfume, but others were entirely odorless.

Although the experimentation admittedly is in its infancy, it is generally agreed this new horticultural wrinkle is capable of tremendous results from a commercial standpoint, and for that reason it is to be tried on a great scale at Grasse, the centre of the perfume industry of France. All perfume-making flowers will be grafted with shots of various plants in an effort to determine what species play the role of intensifier.

Putting on Dogwood.

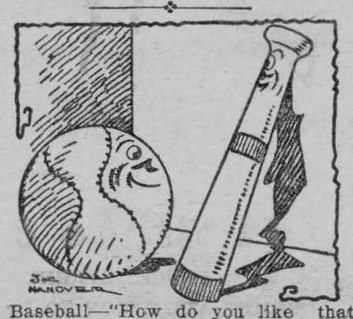
Putting on dogwood is little Miss
Spring,
All around the wood border, the lovable thing.

Putting on daffodils, redbud and glow
Of plum in the orchard where warm
zephys blow.

Hourly expectant, I wait for the spell
Of lovely arbutus adown the wild dell.

And what shall be more to my liking
than all—
The laughter of lilac along the old
wall.

Japonica nodding—and here she is now
With loved valley lilies upon her
sweet brow.



Baseball—"How do you like that long rest we are having?"

Bat—"Not much. I could knock the hide off you right now."

MONEY ORDERS.

A Dominion Express Money Order for five dollars costs three cents.

A new type of thermometer, little larger than a man's watch, works with a special metal spring and indicates all degrees of temperature from 10 degrees below sero to 130 degrees above.

LOST HOPE, SAYS MRS. WATERMAN

Declares Tanlac Restored Her Fully When Almost a Nervous Wreck — Gains 14 Pounds.

"Tanlac restored my health so completely three years ago that I haven't had to take a single dose of medicine since," says Mrs. Cora Waterman, 145 Monroe St., Toronto, Ont.

"I don't believe there was a worse case than mine in Ontario. For about three years I was practically a nervous and physical wreck. I could eat scarcely a thing, sleep was almost impossible, and rheumatism in my hands, wrists and arms almost drove me distracted. I spent every cent I could lay my hands on for medicine, and had about lost hope of ever being well again.

"But Tanlac ended my suffering and saved me a great many dollars. I regained fourteen pounds, too, which I still retain, and I feel as strong and healthy now as when a school girl. I have been praising Tanlac three years now, and want to send out this message to help others."

Tanlac is sold by all good druggists. Over 35 million bottles sold.

Don't Lose Your Hair Try Cuticura

If your scalp is irritated, itching and burning and your hair dry and falling out in combfuls try the following treatment. Touch spots of dandruff and itching with Cuticura Ointment and follow with hot shampoo of Cuticura Soap.

Soap 25c. Ointment 25 and 50c. Talcum 25c. Sold throughout the Dominion. Canadian Depot: Lymans, Limited, 344 St. Paul St., W., Montreal. Cuticura Soap shaves without mug.

Reduces swelling of bruises and strains

It may be a sprained wrist or elbow—a bruised muscle—a strained tendon—

You cannot foresee it. But you can keep Sloan's always handy to relieve the pain.

Sloan's brings immediate comfort. It breaks up the congested and inflamed condition and restores normal circulation. Use Sloan's to guard from pain as you would an antiseptic to prevent infection. Your druggist has it.

Made in Canada

Sloan's Liniment-kills pain!

For rheumatism, bruises, strains, chest colds

WANTS TO HELP OTHER WOMEN

Grateful for Health Restored by Lydia E. Pinkham's Vegetable Compound

Toronto, Ont.—"I took Lydia E. Pinkham's Vegetable Compound for backache and for weak and dreary feelings caused by my condition. Sometimes I felt so bad that I couldn't do my housework. My neighbor told me of your medicine and I read about it in the 'Toronto Telegram' and thought I would take it. I got very good results. It built me up and I have told several friends what it has done for me. You may use this testimonial as it may be of help to some one who has suffered as I have."—Mrs. J. LEE, 25 Harvie Ave., Toronto, Ont.

Mrs. Lee is willing to write to any girl or woman suffering from such troubles, and answer any questions they may like to ask.

Women suffering from female troubles causing backache, irregularities, pains, bearing-down feelings and weakness should take Lydia E. Pinkham's Vegetable Compound. Not only is the worth of this splendid medicine shown by such cases as this, but for nearly fifty years letters like this have been received from thousands of women.

You might be interested in reading Mrs. Pinkham's Private Text-Book upon the "Ailments of Women." You can get a copy free by writing the Lydia E. Pinkham Medicine Co., Cobourg, Ontario.

Handy "Bayer" boxes of 12 tablets—Also bottles of 24 and 100—Druggists.

Aspirin is the trade mark (registered in Canada) of Bayer Manufacture of Monoaceticacidester of Salicylicacid. While it is well known that Aspirin means Bayer manufacture, to assist the public against imitations, the Tablets of Bayer Company will be stamped with their general trade mark, the "Bayer Cross."

Surnames and Their Origin

FENNER

Variations—Venner, Fenour.
Racial Origin—English and French.
Source—Place names.

Here is a family name which belongs in the classification of those which have been developed from place names, the places from which the original bearers had come, or with which they were in some maner connected, and which therefore readily occurred as distinctions to those who wished to differentiate them from others bearing the same given names.

But in this case it is not always easy to tell exactly from which place name the family name has come, in the individual case, without recourse to particular family genealogy.

In many instances, it is known, the family name comes from the name of a parish in Sussex. The name of this place anciently was "Fenne," and in the earlier forms of the family name the spellings "Atte Fenne" and "De Fenne" are found. and there is also record that in the days of Henry VI. this name was changed to Fenner, and later in some instances to Venner and Fenour. But it also appears that the name was brought over by the Normans from the town of Feneur, in what is now Belgium.

HAYDEN

Variations—Heyden, Haydn, Haydyn.
Racial Origin—English and Danish.
Source—A place name.

Here is a family name which, though not always of English origin, may properly be placed in what we might call the classification of "Hay" names, of which latter there are a great many.

In this case, however, whether the name, as such, is of Danish or English origin, it is founded upon the name of a town in Denmark. This place was Hayden, the name indicating a cultivated inclosure, and the town, as might be expected from this name, being a very ancient one.

Such a family name as this, in the form of "Hayden," might as easily spring up in England as in Denmark, for in the Middle Ages, at the period of family name formation, there was a good bit of commercial communication between Denmark and England. If a Danish merchant from Heyden were to settle in London, he would quite naturally have ben referred to by the addition of the phrase "of Heyden" to his given name.

Mrs. C. L. Baker took suddenly ill on Tuesday night, and was removed to the Hotel Dieu Hospital, Brockville, where she underwent an operation for appendicitis. Latest reports are that she is improving satisfactorily.

Capt. Murray Barry of Prescott spent the week-end in town.

The latest models in Women's Oxfords and Slippers from $3.00 to $6.00.—J. L. Casselman. bp

This is the first Special Sale by the Congoleum people and it is a sale worth while. If you miss seeing our window announcements, look in your "Daily" for half page particulars.—D. C. Bush.

The Iris is a most striking flower of crepe-like texture and most exquisite coloring, the gauzy veining reminding one of the butterfly's wing. They bloom in May and June, when there is a dearth of really fine flowers, and once planted are good for a life time. By joining the Horticultural Society at $1.00 you can get 10 roots, named varieties worth $2.50 free as a premium.

On information laid by Provincial Officer, S. R. Marshall, Stanley B. Collison, aged 18 years and nine months, an employee of the Canada Starch Company, at Cardinal, was arrested on a charge of perjury in that he made a statement in police court at Cardinal a month ago knowing it to be false. He pleaded guilty before Magistrate E. E. Adams at Cardinal on Tuesday afternoon and was committed to the counties jail to await sentence

A select assortment of Gold Seal Congoleum Rugs in all sizes for Special Sale, 5th to 12th of May.—Look in our windows for posters and prices.—D. C. Bush.

Capt. Herron, Cadet Inspector, was in Morrisburg on Wednesday of this week and expressed himself as being well pleased with the work of the M.C.I. Cadets. The turnout, being one of the best in years, reflects credit on their instructor, Mr. Dalton. Mr. J. L. Casselman acted as chairman, and after expressing a few words of appreciation, called upon a number of the citizens present to deliver short addresses.

Dahlias are rapidly coming into immense size, distinct and handsome colors, making them grand for cutting and all decorative purposes. Join the Horticultural Society and get 8 roots free as a premium. Membership only $1.00.

The select committee on elections of the Legislature completed its work this week. All the recommendations of changes in the act are technical and of more importance to the returning officers and clerks than to the general voter. No man may vote under any circumstances if his name is not on the list as presented on the day of polling. The chief election officer is given greater powers and his decisions are to go without discussion.

The Post Office Department has issued instructions to postmasters that parcels containing raw furs which have an offensive odor, especially skunk skins, are not to be accepted for transmission in the mails.

Edward O'Neil, aged 47, a prominent St. Regis Falls business man ended his life this week by strangulation in a room in Riverside Hotel, Brasher Falls. He tore a bed sheet into strips, which he knotted together in the form of a rope, and fastened it about his neck. O'Neil was a son of the late Senator Wm. T. O'Neil of St. Regis Falls. He had been active in business, and at one time was president of the St. Regis Falls National Bank. Surviving are his mother, three sisters and a brother.

Their Majesties the King and Queen will address messages to the children in the elementary schools of the Empire on May 24th, and arrangements have been made to have these [illegible] for gramophone production [illegible] children may hear the me[illegible] their Majesties own voices.

J. W. McLeod, M.P.P. for Stormont, was this week unanimously selected as the candidate of the Liberal party in the approaching Provincial elections at the party convention held in Finch. The meeting, was large and enthusiastic, and there was a strong feeling that McLeod would again be returned.

Thrice interesting, the widely advertised Congoleum Rug Sale, through the addition of Carpet Squares and Linoleums at similarly reduced prices—5th to 12th of May. —D. C. Bush.

ANNOUNCEMENT

It may be interesting to some of our friends to learn that Tindal's Garage is flourishing at the same old stand. As we are entering upon the fifth year of our service in this community, it is gratifying indeed to note the number of those who patronized us during the first few months after our establishment, who are now our steadfast friends.

Time works many changes. Therefore it may be pleasant to contemplate the fact that some things are constant. And indeed and in truth, the principles upon which our business was founded those several years ago, are as solid and enduring today as when the first stone of our business structure was laid.

We are here to serve the good people of this community in our humble way, not merely for today, but for the future as well, and in order that we may entertain high hopes for the time that is to come, we realize the necessity of being honest today and everyday. We must be true and just in all, fair and square with all, by rendering a full dollar's value for every dollar charged, putting ourselves in the other fellow's place, looking at things from his point of view, rendering service that is true, service that is GENUINE.

H. B. TINDAL, Prop.

NOTICE OF DISSOLUTION OF PARTNERSHIP

Notice is hereby given that the partnership heretofore subsisting between James L. Casselman and John F. Casselman, as heretofore carried on as Boot and Shoe Merchants, in the Village of Morrisburg, Ontario, under the name and style of J. F. Casselman & Company, has this day been dissolved by mutual consent, the said John F. Casselman retiring from the said firm. The business will be conducted as formerly under the name of J. L. Casselman by the remaining partner, James L. Casselman, who will pay all liabilities of the said firm. All accounts due the said firm must be paid at once, otherwise they will be placed in Court for collection.

Dated at Morrisburg, this 16th day of April, 1923.

JAMES L. CASSELMAN.
JOHN F. CASSELMAN.

In reference to the above the undersigned begs to tender to the customers and friends of the firm, his sincere thanks for the patronage extended during so many years, and solicits a continuance of the patronage and good will so freely extended to the firm in the past.

JAMES L. CASSELMAN.

A Poor Combination

A dependable car, a smooth road, a good driver—— and questionable eyesight. It's a combination found only too often among motorists today.

An engine driver must pass a satisfactory eye test both as to vision and color perception, before being allowed to drive his engine, but a motor car driver is free to drive his car if he is able to use his hands and feet. No thought is given to vision, yet about half the auto accidents are traceable to defective eyes.

It is up to the man behind the wheel———and woman too——to protect the public and safeguard himself. After the accident, all you can be is sorry——or dead.
