The Leader

XXV, No. 4 MORRISBURG, ONT. FRIDAY, JAN. 22 1926

Flour and Feed

We have a real nice assortment of Flour and Feed which we are offering at very reasonable prices. Try our Maple Leaf Flour—none better.

Screenings

We are selling a carload of screening off the car at a cut price, for those who want a good, cheap feed, this is it. The car is expected in less than a week.

CORN

As mentioned in our previous adds, Corn is still the cheapest feed on the market today.

EGGS

Still declining, but not quite as rapidly as they were; with the lower prices there should be an increased consumptive demand, and while we do not guarantee the prices, we should be able to pay for extras 36c; firsts 32c; seconds 25c, for the week.

The MORRISBURG FEED & PRODUCE Co.

MORRISBURG, ONT.

You Can't Buy A Better Galvanized Wash Boiler

Made from heavy hot galvanized Steel Sheet. Full No. 9 size. Large solid handles solid handles—No better Galvinized Clothes Boiler made and it costs you onl y$1.59.

PERHAPS YOU WOULD LIKE

A Real Genuine Copper Wash Boiler

with a seamless retinned cover, polished ALL COPPER BODY, tinned inside. Large solid handles, a boiler that you will be proud of, and that will give you satisfaction, only $2.75. ....

Galvanized Wash Tubs

MORRISBURG — ONTARIO

WILL KEEP CHECK ON MUNICIPAL EMPLOYEES

In future, the time of laborers, employed by the municipality is to be checked up by each department of the Council.

This is a move in the right direction, and is evidence that our Council is endeavoring to transact the business of the municipality in a fair and business-like manner This policy will eventually win the approval and co-operation of all who have the interest of our municipality at heart.

No employee should resent this movement, for misuse of freedom inevitably reacts on the offender, The town officials will have our humble support, so long as they have the strength of will to carry cut the trust placed in them, without fear of scoff or derision.

ANNOUNCEMENT

At a meeting held on Friday last, the Town Council placed the municipal printing in charge of a Printing Committee, and hereafter the municipal priinting will be done at home. This permits us to revert to the $1.50 Subscription rate in Morrisburg, giving the benefit of the Council's action to our subscribers

In making this announcement we wish to thank our subscribers for their loyal support during the period of $2.00 subscription rate. During this period, nine cancelled their subscriptions, four stating that it was owing to the increase in price; and eleven new subscriptions were received from Morrisburg and surrounding district.

The result is very gratifying, and confirms our belief that The Leader enjoys the support of the good people of this community.

KAVANAGH—RYAN

A quiet but pretty wedding ceremony took place in the chapel of the Bishop's Palace, Montreal, on Monday morning, December 28th, when Miss Mary Kathleen Ryan, daughter of Mr. S. P. Ryan was united in marriage to Charles A. Kavanagh, one of Prescott's leading merchants and son of the late Mr. and Mrs. Thomas Kavanagh of Prescott. Canon Harbour of Montreal officiated. Mr. S. P. Ryan, father of the bride and Donald Ryan, brother of the bride, were the witnesses.

Following the wedding breakfast was served at the home of the bride's sister, Mrs. F. W. Hackett, after which Mr. and Mrs. Kavanagh left for Quebec and other points east and on their return have taken up residence in Prescott.

UNITED CHURCH LEAGUE

The biggest night of the season is planned for Friday,, Feb 26th, in the Music Hall, when the beest of local talent will present that humorous and most popular of plays, "Billy's Bungalo." under the auspices of the Young People's League of the United Church

INSTALLATION OF OFFICERS

A joint open meeting of Daisy Rebekah Lodge No. 223, and Zeta Lodge No. 311 I.O.O.F. was held in Zeta Lodge Rooms on January 7 1926, for the purpose of installing the officers of both lodges for the current term. Deputy President Sister Lyda Hummell and Staff of Cornwall, District No 2, performed the duties for the Rebekah Officers in a very creditable manner, as follows:

P. N. G., Sister Annie Winnett.
N. G., Sister Alice Stata.
V. G., Sister Ella VanAllen.
R.S.N.G., Sister Alice Nash.
L.S.N.G., Sister Etta Link.
Warden, Sister Grace Myers.
Conductor, Sister Ethel Dawson.
Fin.-Sec., Sister Lyda Hummell.
Treasurer, Sister Alice McLatchie.
Chaplain, Sister Stella Marsh.
I.G., Sister Sadie Coons.
R.S.V.G., Sister Jannetta Schwerdtfeger.
L.S.V.G., Sister Della Stewart.
O. G., Bro. James Link.
Musician, Sister Eva Cassel.

On behalf of the members of Daisy Rebekah Lodge Sister Linda Clark, Past President, presented Lyda Hummell, District Deputy President, with a beautiful Silver Sandwich Plate at the close of the Installation. The District Deputy President presented Sister Annie Winnett on behalf of Daisy Rebekah Lodge with a Past Noble Grands Jewel, after which, according to previous arrangements, the officers of Zeta Lodge No. 311 were very efficiently installed by District Deputy Grand Master W. H. Bailey and Suite of Eastern District No. 52, as follows:

J.P.G., Bro. R. H. Moore.
V. G., Bro. Chas. Hummell.
Fin.-Sec. Bro. H. Hummell.
I. G., Bro. Frank Stewart.
R.S.N.G., Bro. A. S. Deeks.
R.S.V.G., Bro. W. H. Bowman
R.S.S., Bro. Morley Wells.
Warden, Bro O. W. Duprau.
Chap., Bro. A. E. Nash.
N.G., Bro. R. Winnett.
Rec.-Sec., Bro. W. J. Fetterly.
Treas., Bro. J. S. Jamieson.
O.G., Bro John Weston.
L.S.N.G., Bro. Geo. Robertson.
L.S.V.G., Bro. John Hartley.
L.S.S., Bro. James Reddick.
Con., Bro. Chas. Schwerdtfeger.

Afterwards a sumptuous repast was partaken of by all present at 1.30 a.m. The entertainment consisted of games, music, dancing, songs and speeches.

WOULD MAKE TENANT AND OWNER JOINTLY RESPONSIBLE

A notice of motion which will come up for consideration at the February meeting of the Council, was given by Mr. Hilliard, K.C., at the meeting held on Friday last, making arrears of Lights and Water Service, collectable against the property, in the same manner as taxes.

While this has not been the custom in Morrisburg, in principle, there seems to be a fair degree of justice embodied in the motion. It is drafted according to the existing law, which is intended to protect the property owner, as well as the municipality

When a house is built within the municipality, it is usually equipped to make use of public utilities The owner of the house, and not the tenant, has the right, and exercises his right, by demanding service from the municipality, which is by law bound to comply with the request, and the landlord who objects to the proposed motion forfeits his claim on the municipality. The Council therefore, has a lawful, as well as a moral right, to hold the Owner and Tenant jointly responsible for service rendered. It seems to us that there can be no hardship brought upon the owner through the tenant's default, providing the municipality carries out its portion of the contract, by making the fees for light and water payable monthly in advance, a practice which should benefit the municipality, without doing injustice to anyone.

If the municipality is to be linked closer together, the enforcement of our laws must be based on justice to the individual as well as the municipality as a whole. Fair and constructive criticism, in other words, is called co-operation, and the notice of motion, having been brought in in ample time to invite criticism from the citizens, we believe, is actuated by a proper spirit.

TOWN COUNCIL

Adjourned meeting of Council held in the Town Hall Friday, Jan. 15th

Moved by Mr. Hilliard, seconded by Mr. Marsh, That this Municipal Council, representing all political parties and business interests of the Municipality of Morrisburg, views with satisfaction and confidence the policy of the Toronto Globe in supporting the efforts of the Ontario Hydro Electric Commission to develop the St. Lawrence River, a step long urged by the people of Eastern Ontario and supported by the whole of Ontario in order to relieve the serious power shortage in the Agricultural, Civil and Industrial life of the Province.

It is also resolved that a copy of this resolution be forwarded to the managing editor of the Toronto Globe expressing the hope that public sentiment in favor of this project may be so aroused that the needed assurance of early favorable action may soon be forthcoming.

Moved by Mr Marsh, seconded by Mr. Coir, That the Municipal Council of the Village of Morrisburg wish to place on record its appreciation of the policy of the Ontario Government with respect to the development of the St. Lawrence River for a supply of power to the Province as expressed by the Premier, the Hon. G. Howard Ferguson in his review of the matter published in the press on the 2nd of January 1926 and we respectfully urge that every effort be used to hasten definite action in that connection for the relief of the Province generally and Eastern Ontario Municipalities in particular.

We also resolve that a copy of this resolution be forwarded to the Premier of Ontario, the Hon. G. Howard Ferguson.

Mr Hilliard and Mr. Marsh, That in conjunction with the Reeve, we visited the Pump House and Plant on the Canal Bank and recommend the following:

1.—That in the Spring, when pumping by steam, to renew the remainder of the flume with reinforced concrete.

2—Purchase and install one new plunger, pump or pumping arm.

3—Purchase and have ready to install one new eight inch pipe which has cracked and lately been reinforced with a sleeve. It seems to be working alright but might open again if the Rotary Pump were used.

4—That Mr. Brown be ordered to complete the plan of the waterworks, hydrants, connections and shut-offs in connection with the chairman of the Water, Light and Road Committee.

5—That a survey of the users of water and amounts, and purposes for what used be made.

We would not recommend any change in the present By-Law and rates. It might be wise, before the ice goes out of the canal, too purchase and deliver on the bank at the Pump House, the requisite amount of gravel and sand, and if possible, broken stone, sufficient to make repairs to the flume.

Mr. Marsh and Mr. Challies, that the chairman of the water works committee and the Reeve, be a committee to engage a suitable person to make survey of the water works service, at a reasonable rate.

Mr. Hilliard, Mr. Coir, That Chas. Hummell and Raymond Coligan be auditors at a salary of $35 each, to include the auditing of the Board of Education accounts

Mr. Hilliard, Mr. Challies, That John Prunner be sanitary inspector.

Mr. Marsh, Mr. Hilliard, That F.

ARTHUR FLYNN Morrisburg Ont.

LIBERAL GOVERNMENT WEATHERS CRUCIAL TEST BY MAJORITY OF THREE

Conservative Amendment of Non-Confidence Lost With 120 For and 123 Against—Five Progressives Supported Meighen.

Ottawa, Jan. 3.—The King Government was sustained by a majority of three on the division this morning, the vote being 123 to 120. Only five Progressives voted with the Conservatives for non-confidence. They were Campbell, Lucas, Carmichael, Boutellier and Fancher.

The two Labor members and the two Independents, Bourassa and Neill, supported the Government. The only absentee in the House was Alex. Chaplin, Conservative member for Kent, Ont., who is ill.

The vote was taken just before one o'clock.

The House adjourned till Monday, when the address will be considered.

One hour before the night sitting of the House began, at 8 o'clock, two queues of people five abreast lined the two sides of the corridors in the Parliament Buildings waiting for the unlocking of doors that would admit them to witness one of the decisive nights of Canadian history. Half an hour later the Dominion Police were obliged to ease the strain outside and unlock the gallery doors. The wild scramble for admission that ensued might have been the prelude to a world series game of baseball.

From the general galleries probably three hundred waited patiently outside after the seats were exhausted, bending their heads to catch momentary snatches of the debate as a door was opened. Even Senators had difficulty in gaining entry to their own reserved seats in the east side gallery, and here and there an ex-Cabinet Minister of one persuasion of another vainly sought admission. When the other galleries could take no more the keeper of the door to the Press Gallery was besieged, that siege continuing from 8 o'clock until the momentous division.

Unique is the location of this hotel at Norton Mills, Quebec. It is situated on the boundary, half in Vermont and half in Quebec.

Major N. H. Thompson
Who officiated for the first time as gentleman usher of the black rod—the office long filled by the late Col. Ernest Chambers—at Ottawa, on the opening of parliament.

Italy to Consolidate Colonies.

A despatch from Rome says:—The Tribuna has announced that a project is now being considered by the Minister of Colonies to consolidate the Transjuba territory with the Italian colony of Somaliland.

If the union takes place, the administration of Somaliland will dissolve and the entire territory, which is of vast proportions, will be divided into three residencies and administered from the central commissary at Kisimajo.

The territory of Jubaland was ceded to Italy by England when Ramsay MacDonald was Prime Minister.

Rector Appeals for "Bobs" to Reshingle Church Steeple

A despatch from Darenth, Kent, Eng., says:—Canon H. T. Powell, rector of Darenth, has appealed to every woman in the parish, "whether shingled, bingled, or bobbed," to send at least a shilling—known in England as a "bob"—to assist in reshingling his church steeple. A woman can be shingled for three or four shillings, the minister said in his appeal, but shingling of a church steeple requires a hundred pounds sterling or so.

Canadian Forester to Replace Oaks With Fir and Larch

A despatch from Bewdley, Worcestershire, Eng., says:—Wyre Forest, of a thousand acres of ancient oaks, which in the days of Robin Hood was a royal hunting ground, is to be cleared by the modern woodman, and the ground replanted in fir and larch. The authorities decided that the old oaks while picturesque, were useless and occupied altogether too much space for practical purposes. Canadian foresters are to have charge of the reforestation.

The 1926 program of the Government Forestry Dept., in addition, embraces the laying out of more than 15,000 acres in England and Wales. Spruce, fir and cedar seeds have been brought from Canada and at Thetford marsh will be created Britain's largest forest since the days of the Conqueror.

Wheat Exportation Doubled in Volume Last Month

A despatch from Ottawa says:—The exports of Canadian wheat in December last totalled 57,000,000 bushels. Of this, 10,500,000 bushels left this continent via United States ports, during the month.

In December, 1924, slightly over 29,000,000 bushels of wheat were exported and of that total over 22,000,000 went into the world market from United States ports.

During the five months ended December, the export of Canadian wheat totalled 164,000,000 bushels valued at $232,000,000. Of the volume exported during the five months 128,000,000 bushels went to the United Kingdom and 29,000,000 to other countries. In all, during the five months, 104,000,000 bushels went through United States ports.

To Move Town of Goudreau to Entirely New Location

A despatch from Sault Ste. Marie, Ont., says:—There is a strong possibility that the Town of Goudreau may in the near future be moved in its entirety across the Algoma Central tracks to a new location on the east side, its present location on the west side rendering unavoidable the pollution of the small lake from which the town derives its water supply.

CANADA OWNS HALF GREAT LAKES WATERS

Chicago's Theft Bitterly Attacked by Speakers at Detroit Conference.

A despatch from Detroit says:—Chicago's persistence in diverting 10,000 cubic feet of lake water per second and thus lowering the level of all the lakes to the detriment of shipping brought that city in for blistering attacks from speakers at the protest meeting of the Great Lakes Harbor Association in the Hotel Statler on Thursday. At the same meeting other speakers took a broad view of the Illinois city, and called its actions "human but illogical." Newton D. Baker, former secretary of war, whose official duties brought him into the water diversion controversy during his term of office, was the principal speaker, and it was he who termed Chicago's determined effort to continue to steal the lake water as human and natural. But he went further and condemned the city as injuring the nation as much as if it were "removing the rock ballast from a trans-continental railroad to build a cobblestone pavement for ox-carts."

"We are using our natural resources at a prodigious rate," the former secretary said. "The time is not far distant when our coal will have to be conserved and a distinction make between its use in those industries that are essentials and those that are considered as luxuries. Neither is the day far distant when every stream in the country that will turn a wheel will have to go to work and the great streams of the country will be considered our principal natural assets.

"I understand that the volume of water diverted at Chicago would produce 500,000 horsepower if utilized in the fall down the St. Lawrence River to the Gulf of St. Lawrence. That water is immensely more valuable going down the St. Lawrence than it would be descending the Mississippi.

"If the lakes were solid blocks of coal, would it be just for Chicago to tunnel to the shores of Wisconsin and to the shores of Canada and take the coal from the very doors of the cities there? The answer to that is apparent. The immediate interest in the diversion of the water is its effect on the lake shipping which is being seriously crippled."

There was an outburst of handclapping when President Bruce, in his opening address Thursday morning, declared: "We must remember that half the Great Lakes waters belong to Canada. Congress or officials of the United States Government cannot give away what does not belong to them." Then he added significantly, "This fact may be impressed upon us before the problems have been settled."

Pasture.

He had gone away without goodby,
A thing he never would have done;
For nobody loved him more than I—
Except, perhaps, the sun.
And the sun—when I said, "O tell me where!"
Though it showed me some open pasture-bars
Into the pathway of the air,
Gave no particulars.

CHATEAU FRONTENAC PARTIALLY DESTROYED WITH LOSS OF $2,000,000

A despatch from Quebec says:—With a loss that is unofficially estimated around two million dollars, with five firemen taken to hospitals, and a commercial traveler named Boyd, suffering from partial asphyxiation, the Chateau Frontenac Hotel, one of the premier hostelries in Canada, was the victim on Thursday night of a conflagration that raged for nearly five hours before it was finally controlled. The principal damage was sustained by the older portion of the building, that wing which overlooks the St. Lawrence River and which contained the great drawing-room and the old tower. The new portion, the hotel proper, which houses the guests and in which is situated the lofty, eighteen storey central tower, was saved and did not suffer damage beyond that of smoke and water.

The north and south wings were destroyed, the roof falling in. The blaze started around 5.30 Thursday evening in the old tower and made great headway, fanned by a strong wind. The entire fire-fighting forces of the city were called into play, but for a time little progress was made, due to an apparent scarcity of water. This, aided by the force of the wind, which swept the flames rapidly through the building, made the task of controlling the blaze an uphill job.

No lives were lost as the portion of the building in which the fire began had not been occupied by guests for some time, having been given over to servants' quarters. But five firemen were injured and had to be sent to hospitals when a ladder which they were rearing to combat the conflagration toppled, crashing them to the ground.

The section affected was immediately isolated, the steel and concrete buildings in the newer portion of the hotel baffling the flames. For nearly two hours, however, the fire gained and consumed the upper part of the rotunda, facing east. The three upper floors fell prey to the blaze and were consumed with all their contents.

All the guests were moved out of the hotel, and emergency arrangements made for the night on their behalf. Later on it was learned that the Canadian Pacific Railway had rushed a special train consisting of 25 sleeping cars and 3 dining cars to the city for the benefit of the guests.

Ancient London Bridge Again is "Falling Down"

A despatch from London says:—Once again London bridge is in danger of "falling down." Observers of water stages in the River Thames claim that the famous old Waterloo bridge, recently condemned as unsafe, is not alone in being threatened by the tricks of the tide and the frequent dredging operations, but that London bridge also will soon have to be replaced by a modern structure.

Like the doomed Waterloo bridge, London bridge is of stone. It was built a century ago, replacing another stone structure which replaced the famous old wooden span which, after "falling down" for centuries, was so badly damaged in the great fire of London in 1666 that it had to be demolished.

Women Mountaineers Now Closely Rival Men

A despatch from London says:—Hale mountaineers will have to climb faster if they hope to keep ahead of women rivals, the Hon. C. G. Bruce, one of the leaders of the assault on Mount Everest, told members of the Ladies' Alpine Club at their annual dinner in London. Female mountain climbers continue to be "ladies," it is noted, although their sisters who go in for tennis are now merely "women," by the ruling of the national tennis organization.

Mr. Bruce told his hostesses that members of their sex are now accomplishing feats almost as noteworthy as those of men. He said he expected to see Mount Everest ultimately scaled by women as well as men.

F. E. Meredith, K.C.
of Quebec, has been elected Chancellor of the university of Lennoxville.

The Meighen Amendment.

Ottawa, Jan. 14.—The following is the text of the want-of-confidence amendment moved by the Right Hon. Arthur Meighen, Conservatice Leader in the House of Commons:

"In the late general election the candidates of his Excellency's then advisers, at whose instance the appeal to the country was made, were defeatted in a large majority of the constituencies.

"That nine Ministers of the Crown, including the Prime Minister, were rejected at the polls and have no seats in Parliament.

"That the party represented in the last Parliament by his Majesty's Opposition secured in the said election by far the largest support in the popular vote, and has substantially the largest number of members of any party in the present House of Commons.

"That those who now assume to be his Excellency's advisers have among them no Prime Minister with a seat in either House of Parliament, and under such circumstances are not competent to act as, or to become, the Committee of Parliament, commonly known as the Government, or to address Parliament through his Excellency, and their attempted continuance in office is a violation of the principles and practice of British constitutional government."

Northern Alberta Enjoys Improvement in Trade

A despatch from Edmonton, Alta., says:—A tangible proof of the marked improvement in the prosperity of northern Alberta is shown by the records in the Edmonton land titles office where the registrar, A. T. Kinnaird, has stated that "never before in the history of this office have we handled so many discharges of mortgages on land and buildings as have passed through our hands lately." The land titles office in Edmonton serves all the northern part of the province, the district also extending south to Innisfail.

A Stomach Outside.

If a starfish finds a tidbit too large for it to swallow, it extends its stomach out of its mouth and digests the morsel outside.

Canada from Coast to Coast

Halifax, N.S.—Two new steamship lines made Halifax a port of call in 1925, and during the first six months of the year the increase in ship tonnage was over one million tons. For the ten months of 1925 the increase in ship tonnage, compared with the same months last year, was over 1,500,000.

Saint John, N.B.—At least sixty families of British settlers, twice the number arriving the last season, will be brought to the Maritime Provinces by the Soldier Settlement Board in the spring, according to the Maritime superintendent of the Board here. It is probable that even more than this number will be placed, depending on the number of farms which become available.

Three Rivers, Que.—According to the census which has just been concluded by the Board of Assessors the city of Three Rivers now has a population of 30,460, which means an increase of 4,452 over last year. The introduction of new paper mills accounts largely for the increase.

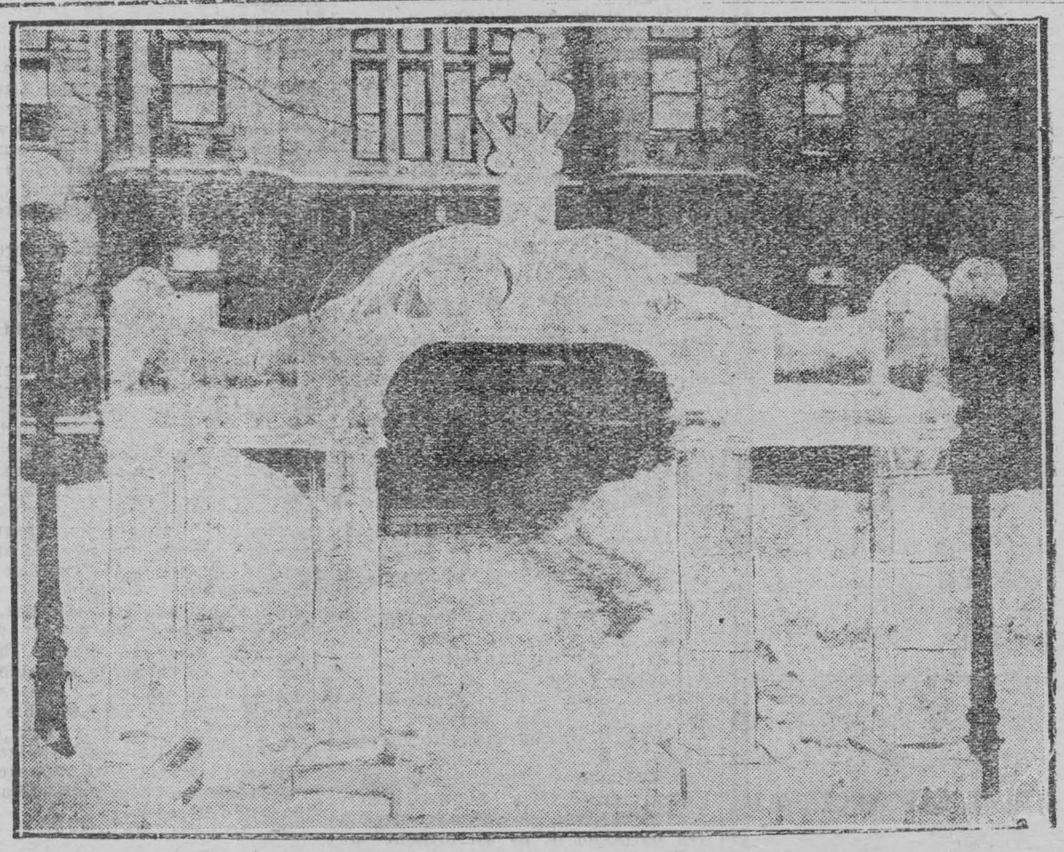
Timmins, Ont.—The remarkable results achieved by gold mines in Northern Ont., are well illustrated by recently issued figures on the Hollinger gold mine. Before the end of January this year output from the Hollinger will pass the $100,000,000 mark. Dividends of $30,500,000 to the end of 1925; a surplus of over $9,000,000 on hand at the end of 1925; an ore reserve of around $60,000,000 developed; a plant worth about $7,000,000 almost entirely paid off—these are the achievements, and the assets to which Hollinger Consolidated can point at this time.

Winnipeg, Man.—Manitoba as a fox-raising province is coming into the limelight. In Vancouver's first annual fox show out of ten open entries Winnipeg foxes secured nine first prizes and one second, in addition to four championships and three special trophies.

Saskatoon, Sask.—Offices for the proposed Saskatchewan Hog Pool have been opened in this city. Meetings are being held at various points throughout the province and volunteer organizers are now in the field. A fund is being supported by the Farmers' Union to send a delegation to Great Britain, Ireland, and Denmark to study the bacon industry there.

Banff, Alta.—A world championship dog derby to the "top of the world and back" will be run for the first time in the history of dog mushing at the Banff winter carnival this year. This course, from Calgary to the Great Divide and back to Banff, will be the longest dog race ever staged, according to records, and will exceed The Pas derby by 23 miles. The unique course, lying over the most rugged scenery in North America, will cover 173 miles.

Victoria, B.C.—Some 10,800 barrels of oil were put up by the Consolidated Whaling Co. of Victoria, as a result of operations of four stations from May to October. The oil will be used for the manufacture of toilet soaps, tanning, tempering steel, fruit and other sprays, while blood and bone-meal are also used for the culture of flowers and fruits.



ICE SCULPTURE IN QUEBEC

Above photo shows an archery, one of the many odd designs fashioned by artists from solid ice in the picturesque city. Many stores and other concerns have them made for display. On days when the sun is strong they are covered with wooden screens.

THE WEEK'S MARKETS

TORONTO.

Man. wheat—No. 1 North., $1.68½; No. 2 North., $1.64¾; No. 3 North., $1.61½.

Man. oats— No. 2 CW, nominal; No. 3, 52¼c; No. 1 feed, 50¾c; No. 2 feed, 48¾c. Western grain quotations, on track, bay ports.

SUGGESTIONS FOR SOLVING CROSS-WORD PUZZLES

Start out by filling in the words of which you feel reasonably sure. These will give you a clue to other words crossing them, and they in turn to still others. A letter belongs in each white space, words starting at the numbered squares and running either horizontally or vertically or both.

GUARD THE BABY AGAINST COLDS

By Keeping Baby's Own Tablets in the House at All Times.

To guard the baby against colds nothing can equal Baby's Own Tablets. The Tablets are a mild laxative that will keep the little one's stomach and bowels working regularly. It is a recognized fact that where the stomach and bowels are in good order that colds will not exist; that the health of the little one will be good and that he will thrive and be happy.

Thousands of mothers have become convinced through the actual use of the Tablets that there is nothing to equal them in banishing constipation and indigestion; breaking up colds and simple fevers; expelling worms and making teething time easy. Among the thousands who praise Baby's Own Tablets is Mrs. Alex. J. Perry, Atlantic, N.S., who says:—"I always keep Baby's Own Tablets in the house, as I know of no other medicine for little ones to equal them."

Baby's Own Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

In Spring the Willow's Wanton.

In spring the willow's wanton;
The wild young limbs of her
Dance to the ancient April tune
In pale green gossamer.

In June she moves sedately,
Smoothing her flounces down
And whispering discreetly—
A lady of the town.

But grave she is in winter,
Above the frozen sod
Lifting slim supplicating hands
In prayer, a saint of God.

—Virginia Lyne Tunstall.

The Cause of Cancer.

Much public interest has recently been manifest as to the cause of this deadly scourge, but few people realize that to primitive races leading primitive lives cancer is unknown. If Ontario people would grasp the fact that their present diet of refined foods and reckless meat consumption is depriving them of the priceless organic salts which furnish immunity to savage races, they could save themselves incalculable suffering and expense by exercising the same common sense they devote to their live stock and cars. Improper feed to your stock and domestic pets calls for financial loss and expensive veterinary advice. Wrong fuel for your car means loss of mileage—perhaps no mileage—and the expensive overhauling at your particular garage, to say nothing of your own loss of temper, etc., for your own carelessness. Knowing this to be so, and being usually careful to avoid it, why don't you take better care of your own body?

There never was a case of cancer which was not proceeded by the now almost universal complaint of constipation caused by improper food, but if white bread, white sugar, boiled vegetables and other "foodless foods" are persisted in, constipation must continue to be "the forerunner of cancer," which now is recognized as the most frequent cause of death throughout civilization.

The letter of Professor Barton Scammell, M.S.C.L., published in "Truth," contains facts which profound experience has proved of a vital importance to many cancer sufferers:—"The radioactive alkali, potash, is the great oxygen attracting element in the body. It forms over 70 per cent. of the mineral ash of the red corpuscles in the blood. Owing to certain defects in diet and the preparation of food, the modern civilized human being suffers from "potassium starvation," and the increase of cancer is a corollary of this state of affairs." Thousands of cancer patients have been brought back to normal health and untold numbers have averted attack by the dread malady by restoring to their systems those assimilable potash salts, of which they had for years been deprived by their regular diet. And since that eminent surgeon, Dr. Robert Bell, of London, abandoned the knife for the dietetic and hygienic treatment of cancer, his phenominal success has inspired justified hope and confidence in the hearts of sufferers throughout the world. Once it is generally known that cancer and a normally healthy blood stream are incompatible, common sense dictation of self-preservation should result in adoption of a naturally beneficial diet that will automatically repair much of the damage already unconsciously inflicted, and rapidly diminish the growing annual mortality created by this self-inflicted blood disease. To enable any reader to thus win back normal health and strength, the writer will freely mail simple directions for useful guidance thereto if request is sent to Charles Walter, 51 Brunswick Avenue, Toronto 4, Ontario.

Colors in Medicine.

Colors are now used for the treatment of various disorders, being applied to the body by means of a 1000-candle-power lamp. Green is very soothing, giving a sensation of warmth and relieving pain; it also lowers the blood pressure. Blue acts as a tonic, raising the blood pressure. As a general stimulant, tonic and vitaliser, there is nothing to touch orange.

Minard's Liniment for Grippe.

SLAVES OF "THE NEIGHBORS"

Wagging Tongues That Cause Trouble: By Dorothy Dix.

There is no more difficult question to decide than how far we should be ruled by our neighbors, and where we should draw the line between snapping our fingers in Mrs. Grundy's face and grovelling in the dust before her. Our reputations are in the mouths of our acquaintances, and we stand or fall by what they say about us.

It isn't enough for us to be good; we must look good to those about us, and act in accordance with their conventions.

Our neighbors cannot see into our souls. They can only judge by the outside, and make such deductions as appearances seem to warrant. Therefore, we are foolish if we think we can defy our neighbors, and do as we please, and live our own lives regardless of them.

What "They" Say.

Every now and then you find some intrepid individual who tries this experiment. But sooner or later the wheels of public opinion roll over all of these people and leave them crushed and maimed. They find themselves ostracized, robbed of their ambitions, dropped out of everything, and left to go their self-elected way alone.

Now this fear of what "they will soy" is the beginning of righteousness. It is what keeps many a weak, tempted brother and sister in the straight and narrow path. And it is a good and wholesome thing for us to entertain a proper respect for our neighobrs' tongues.

But while we are wise to accord proper deference to our neighbors' opinions, we are foolish to be slaves to them, and to be so afraid of what they will say about us that we sacrifice all our independence to them. For we may be sure that no matter what we do, we will be discussed and criticized and that we will not be able to please everybody.

The Joneses will think we stay at home too much; the Robinsons that we go out too often; the Smiths that we are extravagant; the Thompsons that we are mean. If our household is a devoted one. some of the neighbors will hold us up as an example of a happy marriage, and others will suspect it of being a bluff.

Unfortunately, this fear of "what they say" makes such cowards of many people that they will ruin their lives rather than do something they think the neighbors might criticize. It is at the bottom of what makes men starve along at what they call "white-collar jobs" when they might be making fortunes in some trade. It is what crowds the offices with the unfit who would make successes as carpenters, or bricklayers, or plumbers.

This dread of what the neighbors will say is still keeping thousands of women who have a genius for cooking that they would love to express, and who thrill at the sight of a pan and pot, out of the kitchens that they long to be in. They would a million times rather go out to domestic service than work in factories or shops, if they weren't terrorized by the thought of what their neighbors would say.

Worst of all, this fear of what "they say" makes men and women cripple themselves by extravagances. They feel that they have to keep up with the Joneses. They haven't the courage to live according to their means. So they run into debt and come to disaster in the end.

And the queer part of it all is that when we are brave enough to be independent, and choose the sort of work we are fitted for by nature, our neighbors praise us for it, and say kindly things, instead of ridiculing us as they do when we pretend and pose. The moral is that we should live so that we will not be afraid of what "they say" about us, and having done that, not care a hang what they do say.

Things taste so good we can't help eating too much, now and then. Don't suffer for it. Take Seigel's Syrup. Any drug store.

Midget Fountain Pen.

A midget fountain pen that will hold but a drop of ink and write 300 words has been made.

Expected Too Much.

Bobby came home from his first day at school with the announcement that he could write, but on being given pencil and paper he made his usual meaningless scribbles.

"But what," said his mother, "does it say?"

"How do I know?" answered Bobby. "I havent learned to read it yet."

Frozen air is the cause of deep blue skies, according to scientists.

CANCER

The potassium treatment which, first presented by the late Dr. F. W. Forbes Ross in England in 1912, has been scientifically perfected, has won the gratitude of countless Canadian and American sufferers who have experienced its unrivalled success. By combining the two words "Cancer" and "Potassium," this home treatment for all diseases caused by the universal potassium starvation is legally protected by patent under the name of

THE CANTASSIUM TREATMENT

Experience of many thousands confirms the great English authority's statement:—"CANCER IS A BLOOD DISEASE CAUSED BY POTASSIUM DEFICIENCY," and, if such deficiency is remedied,—even far advanced and apparently hopeless cases will retrograde without surgical operation, radium or X-ray tortures and needless expense. Medical men in all parts are recommending or adopting Cantassium Treatment on behalf of their patients, and hundreds of thankful letters from restored cancer victims speak of AUTHENTICATED RESULTS which bring justified hope to present sufferers.

A most interesting book, which will be mailed YOU free of charge, explains the CAUSE and the most rational methods of avoiding the disease or treating it where it already exists. The co-operation of every reader of this paper is earnestly requested in fighting the Cancer Scourge by studying its Cause and Treatment and spreading the knowledge acquired.

Cancer claimed 150,000 victims on this continent last year.

Cancer strikes rich and poor alike without warning. Protect yourself and dear ones without delay by sending for this FREE BOOK to

Self-Poisoning Takes Huge Toll

Many Fail in Life Through Sheer Neglect of Fundamental Rule of Health

Thousands of men and women are to-day victims of their own neglect. Grouchy, listless, quickly tiring, suffering from headaches and biliousness, they spend enormous sums in medicines without avail. They would give much to regain their old vitality.

Can it be done? Yes! How? Simply by recognizing the importance of one fundamental rule of health—the proper elimination of the bowel contents. Poisons that are allowed to remain in the system quickly lower the stamina, weaken the nerves and thus pave the way to ill-health. Stop this self-poisoning by taking *Nujol*—the scientific lubricant that completes the work of Nature's lubricant when, through modern living conditions, the natural supply fails.

Nujol can be taken indefinitely without injury to the system. Try *Nujol* to-day. Ask for it at your nearest drug store, but remember there is only one *Nujol*. Watch for the name "*Nujol*" in red on the label and package.

Stop Failing Hair

Rub the scalp four times a week with **Minard's**. It removes dandruff and promotes the growth of hair.

Adam's Suit.

Little Roger, spending a holiday on his grandfather's farm, was permitted to beguile the hours of a wet day by turning over the leaves of the family Bible.

Suddenly he looked up from the faded pages and quaint pictures, and called out:—

"See what I've found, grannie!"

In his hand he held a leaf, old and dry, and after a few moments' reflection he added:—

"Do you think it belonged to Adam and Eve, grannie?"

RESTORED TO GOOD HEALTH

Mother of Eleven Children Praises Lydia E. Pinkham's Vegetable Compound

Her Interesting Experience

Buckingham, Quebec.—"I am the mother of eleven living children, and my baby is five months old. I am only 38 years old and I have taken Lydia E. Pinkham's Vegetable Compound for weakness and my nerves. I knew of it from my sister, Dame Edouard Bellefeuille of Ramsayville. For five years I was in misery and was always ready to cry. Now I am so happy to have good health. My daughter, who is 18 years old, has also taken it and will be happy to recommend it to all young girls."—Dame WILLIAM PARENT, Box 414, Buckingham, Quebec.

Why suffer for years with backache, nervousness and other ailments common to women from early life to middle age, when Lydia E. Pinkham's Vegetable Compound will give you relief?

In a recent country-wide canvass of purchasers of Lydia E. Pinkham's Vegetable Compound, over 250,000 replies were received, and 98 out of every 100 reported they were benefited by its use.

TO THE MOTHERS OF ALL PALE GIRLS

If Your Daughter Shows Signs of Anaemia a Tonic is Needed.

Anaemia is simply a lack of blood. It is one of the most common and at the same time most dangerous troubles from which growing girls suffer. It is common because the blood so often becomes impoverished during development, when girls often overwork and overstudy. It is dangerous because of the stealthiness of its approach and because of its tendency to grow steadily worse. Every growing girl should occasionally take a tonic to ward off this insidious trouble. It is because of their powerful action in rebuilding the blood that Dr. Williams' Pink Pills have made a world-wide reputation. The case of Miss Claire Sullivan, Pincher Creek, Alta., amply proves the value of this medicine. Miss Sullivan says:—"During my school days I suffered a great deal from thin and watery blood. I was continually weak and tired; my appetite was poor, my sleep unrefreshing and I was troubled with backaches. To make matters worse I was attacked with acute appendicitis and the operation left me in a very weakened state. My mother, learning of the value of Dr. Williams' Pink Pills, had me take them and after using them for some time I can say the result was simply wonderful, as they completely restored my health, and now when opportunity occurs I always recommend these pills to weak, pale girls suffering as I did."

You can get the pills from your druggist, or by mail at 50 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

"Sincere" Means "Without Wax."

The word "sincere" has a very curious origin. It comes from two Latin words—"sine,' meaning without, and "cera," meaning wax. The explanation is that in olden days flaws in the marble of a statue or bad workmanship were filled in and hidden with wax. So a statue of good marble and good workmanship was sincere—that is, without any wax in it! It is only fair to say that not all scholars endorse this derivation, but no other is known.

What She Does.

A wife is said to multiply a man's joys, divide his sorrows, and subtract his income.

Gibraltar has no public debt, no tramway, no railway, and no land capable of cultivation.

Of the population of the British Empire in 1921, only about one-seventh is of European descent.

Canada in 1926.

Canada has entered upon a new year with possibly the best prospects she has ever had. For some reason or other, whether it has been of our own making or that nature has been particularly kind to us, we have just passed through a year of good crops, our mining industry has been busy, our forest resources have been actively developed and our manufacturing plants have gradually increased production. In fact, the possibilities seem to be about all we could desire, and there is only one question to be answered: "Are we prepared to make the most of our opportunities?"

If we sit down and limit the range of our vision to our immediate vicinity we may not see the bright outlook, while if we wish to be pessimists we can certainly find an excuse for being so, but we would have difficulty in finding a bona fide reason for any feeling of depression. Canadas clouds, the result of post-war conditions, are rapidly clearing away, and from the silver lining is shining forth a brightness that bids fair to place Canada upon the crest of the wave of prosperity in the coming year.

Rare Beauty.

I know the variable day will bring
A plethora of beauty in some form;
An eddy of dry leaves before a storm,
Or in the shadow of a pigeon's wing.
Some count it an inconsequential thing
To see an ash-can heaped with colored glass,
A daisy, in a patch of dusty grass,
Or gulls, past city docks, low pinioning.

But those who love the river's changing lights,
The quietness of ships, the afterglow
Of sunset on some sea-dog's face;
The witchery of over-jewelled nights,
The amber of street lights on falling snow,
These find rare beauty in the commonplace.

—Franklin N. Wood,d in L'Allouette.

Just to Make Sure.

Irish Traffic Officer (to speeder)—"Have you a permit for driving an auto?"

Speeder—"Sure. I've got it here in my pocketbook."

Officer—"Thats all right. If ye've got it I don't need to look at it. If ye didn't have one I'd have to see it."

Mysteries of the Telephone.

Little Dolly, who was staying with her aunt, heard her mother's voice through the telephone. She listened, and looking carefully at the mouth of the telephone said: "Oh, auntie, how will mother get out of that little hole?"

Minard's Liniment for frost-bites.

Answer to last week's puzzle:

Genuine BAYER ASPIRIN

Proved safe by millions and prescribed by physicians for

Colds Headache Neuritis Lumbago
Pain Neuralgia Toothache Rheumatism

DOES NOT AFFECT THE HEART

Safe — Accept only "Bayer" package which contains proven directions. Handy "Bayer" boxes of 12 tablets Also bottles of 24 and 100—Druggists.

Aspirin is the trade mark (registered in Canada) of Bayer Manufacture of Monoaceticacidester of Salicylicacid (Acetyl Salicylic Acid, "A. S. A."). While it is well known that Aspirin means Bayer manufacture, to assist the public against imitations, the Tablets of Bayer Company will be stamped with their general trade mark, the "Bayer Cross."

TOWN COUNCIL

(Continued from page 1)

S. Broder be assessor at a salary of $90 and that he be instructed when assessing, to collect dog taxes, giving a tag as receipt for which collection he shall receive ten per cent. of the amount collected.

Mr. Marsh, Mr. Hilliard, That C. L. Baker be truant officer at a salary of $15.

Mr Hilliard, Mr. Challies, That Herbert Clark be appointed Fire Chief at a salary of $15.

Mr. Marsh, Mr. Coir, That John Prunner be engaged as Superintendant of Roads and Streets, caretaker of Town Hall, and Lock-up and plant on Canal bank at a salary of $70 per month, and to assist running Electric Plant when not otherwise engaged.

Mr. Challies, Mr. Coir, That Geo. B. Stitt be Supt of Electric Light Plant, and to run plant in day time at a salary of $3.50 per day including Sundays, and to perform all duties assigned him by the chairman of Light Committee or the Reeve.

Mr. Hilliard, Mr. Challies, That Earl Phillips be Supt. and Caretaker of Waterworks plant at a salary of $50 per month

Mr. Hilliard, Mr. Coir, That the Reeve and Mr. Marsh be a Committee on Printing.

Mr. Hilliard gave notice of the following motion which will come up for consideration at the February meeting:

"Whereas by Section 27 of The Public Utilities Act, it is provided that the sum payable by the owner or occupant of any building or lot for the public utilities supplied to him there, or for use thereof, and all rents, rates, costs and charges by the said Act to be collected in the same manner as rents or rates for the supply of a public utility shall be a lien or charge on the building or lot, and may be leved or collected in like manner as municipal rates and taxes are recoverable.

Therefore, Be It Resolved that all rates for light and water not paid for in any year, on or before the fifteenth day of October in each year, shall be placed upon the Collector's Roll and collected as taxes and in default of sufficient property exigible by distress therefor, shall hereafter be returned against the said land.

That this Resolution is now passed so that all owners or tenants will have ample notice of the action of the Council.

Be it further resolved that the Collector of Light and Water shall notify all users of light and water that all rates are payable in advance on the first days of January, April, July and October and are not only liable to be collected as provided in the By-laws relating to light and water but are also liable to be collected as taxes and returned against the land, and also when any light or water is in arrear to notify the owner of such arrears and his liability therefore.

The Chairman of the Light and Power Committee outlined his program for the coming year, as follows:—

1—A report on Physical condition of both plants and transmission lines Analysis covering calendar year of 1925, power developed by tower plant—minimum and maximum.. Revenue from sale of energy.

2—Report of advisability of meter installation, following points to be considered: Cost and plan of financing, for property owner and for property rented. Attitude of the O H. P. Comm. in connection with this work. Suggested rate for all classes of users. Estimated revenue from lower plant and upper plant. Estimated cost of operation—lower plant and upper plant. Estimated cost per H. P to develop—upper plant and lower plant. Suggested plans for collecting revenue.

3.—Report on upper plant. Advisability and cost of hitching pair of turbines in each penstock to generator by belts Advisability and cost of placing top over penstocks to prevent vertices. Estimated H.P. plant would develop if changes as suggested were adopted Advisability of removing and selling one pair of turbines in each penstock and estimate salvage value. How these proposed changes would effect the value of the plant in case the proposed development of the St. Lawrence materalized. Chances of increased water supply and effect, under present conditions and under proposed development of the St. Lawrence River

4—Advisability of scrapping trans mission line running to tinplate plant and the advisability of replacing the primary line with new wires. Cost of installing an Electric Siren for fire alarm.

FROATBURN

J. B HOLMES, Prop.
R. Link, Auctioneer.

bc

Pity the Salesman who cannot—

The salesman who is not free to use Long Distance without being criticized is probably not covering his territory in the most economical manner.

He is competing with salesmen who call up their customers between visits; secure repeat orders; or sell additional items;

—with Sales Managers who encourage salesmen to use Long Distance, because it saves money and time;

—with salesmen who, when travelling, telephone to customers in small towns from some central point.

Of two salesmen who both preserve a proper proportion between expense and sales, the one who uses Long Distance the most is usually the most effective.

Hourly Test makes Quaker Best

The superior baking quality of Quaker Flour is due to the selection of the wheat and the scientific manner in which it is milled. Even more important is its uniformity.

Flour must maintain an unvarying quality to produce the best baking results.

Quaker Flour is subjected to severe tests every hour during the milling process. That is why Quaker Flour never varies in quality.

Every sack is milled the same. That is why it always bakes the same.

Quaker Flour

Always the Same-Always the Best

Every sack of Quaker Flour is guaranteed to give absolute satisfaction.

The Charm

BY WILLIAM MERRIAM ROUSE.

PART I.

Twice since morning the face of Mlle. Thais Lanctot had begun to freeze. On seeing the warning white spots upon cheeks and chin, the two men, Guilbault and Boyer, had leaped from the traineau and with handfuls of snow gently but swiftly rubbed out the frost. It was now noon; and even with the sun as high as it would go that day over Northern Quebec, white appeared for the third time on the cheeks of mademoiselle.

"This is enough, Thais," said Jules Guilbault, when they had again restored good red blood to the face of the girl. "You must be warmed at once, and thoroughly, even if we have to make camp here at the side of the road."

"We can do better than that!" exclaimed Gustave Boyer. "You saw that half-broken road we passed a little while ago? Well, at the end of it there is a house. A chopper named Paquet, or something like that, lives there. We're halfway to Ste. Rose du Degel now. Suppose we stop at the house of this Paquet, eat, get warm and go on? It's the only house on the road, and there's a moon to-night, so it won't matter greatly if we are delayed somewhat."

"Yes!" cried the girl. "Let us do that, my Jules. I've tried not to complain, but truly the cold is terrible to-day.'

"Thais!" Guilbault was shaken by an inward accusation of neglect. "I should have made camp, or turned back, or done anything rather than have you suffer!"

But Thais Lanctot laughed.

"Foolish one! It is nothing; only let us go to the house of this chopper as quickly as we can."

"It must be 40 below," muttered Jules, as he urged the horse on. "I should have known better than to start with you, Thais!"

"Yes?" she whispered teasingly, and pressed her mittened hand against his arm. "Not for your wedding, Jules?"

He turned and looked down at her adoringly; for he and Thais were on their way to the priest at Ste. Rose du Degel to be married that evening. The next day they would drive to the railroad at Lac St. Jean, and then make the long trip to the city of Quebec for a week of splendor. It would be the longest journey that either of them had ever made.

It is said that fools and heroes are not far removed from each other, and that a really simpleminded man is related to both. Without doubt, only Jules Guilbault, in all the vast country above the rivers, would have thought of asking his chief rival to be his best man.

That was what Guilbault had done, and he saw nothing either strange or amusing in it. Was it not true that Gustave Boyer had been his friend, and that he was a fine fellow? No one could deny it. Was it not true, also, that Thais Lanctot had been fond of Boyer before she had promised herself to Jules? Certainly. They were, therefore, all friends. It was quite simple.

From the little neighborhood where a few families had won homes from the forest it was thirty miles to the village of Ste. Rose du Degel. The three in the traineau had been on the road since morning, and the men themselves were not sorry when, at the end of a wandering and poorly made byway, they haw a house of unhewn logs. It was something between the cabane of a chopper and the home of a habitant, a farmer.

They drove under a shed and blanketed the horse without having stirred any sign of life. Not even a dog barked.

"Parbleu!" muttered Boyer. "The bonhomme is stingy with his wood. There's no smoke coming out of the chimney."

Guilbault was already pounding at the door, with an anxious eye upon the face of his betrothed. No answer came from within, and, after a moment of waiting, he lifted the latch and pushed open the door. It is the unwritten law in the woods that one may do this, for a barred door in winter might mean death to the man outside.

Thais ran at once to the stove and began to unwind her great woolen muffler. She revealed a face to command a second look from any man, in city or country—a face conscious of its own beauty. Her great dark eyes flashed about the room.

"It's a man living alone," she said, with conviction. "He must be out at work now. Look! He hasn't washed the dishes for two or three days."

Guilbault had brought in the package of food that they carried. As soon as a little of the stiffness went out of his fingers, he opened it and began to spread its contents upon the table. At this moment it happened that the three of them were silent—Thais and Jules getting the meal ready to eat and Gustave stirring up the fire.

Suddenly Thais let a knife fall clattering to the floor. She stood with her wide eyes filled with alarm, and her head lifted to listen.

"Mon Dieu!" she whispered. "What was that?"

Boyer straightened up from the stove.

"What was what?" he asked.

"Didn't you hear it?" She turned to Jules. "It sounded like a groan!"

Guilbault had heard something, with his keen woodsman's ears, but he was not sure what the sound had been or whence it had come. Before he could reply to Thais, a moan drifted through the room. It did not seem to come from anywhere. It floated upon the air, unlocalized, not loud, but distant and carrying anguish.

"It's a ghost," said Gustave jestingly; but his ruddy face grew a little pale.

"Find out, one of you, what that sound is and where it comes from," cried Thais impatiently. "It makes the hair of one's head rise!"

"Try that door," suggested Boyer.

Guilbault was already on the way. He lifted the iron latch and pushed tentatively. The door swung open, but upon the threshold he paused with his gaze held inside.

"Our Lady!"

His voice died away. Thais and Gustave, after a moment of hesitation, rushed to his side.

They saw a small sleeping room, more orderly than the kitchen, but not better furnished. From a blanket-filled bunk in one corner a human face looked toward them—a face which revealed, although the bunk was far from the single window, sickness and delirium. The eyes saw, and did not see. As they gazed, another moan came from the half-open mouth.

"Mon Dieu Seigneur!" breathed Thais.

"The poor one!" cried Jules Guilbault.

He stepped into the room. Both Thais and Gustave caught at his sleeve.

"Be careful, Jules!" exclaimed Boyer. "There's been smallpox in the parish this winter!"

Guilbault went on, unheeding, and stopped at the side of the bunk. Like a mummy the still figure lay, wrapped and banked about with blankets, so that no wandering current of air could do harm.

For a little moment Jules remained silently looking down. Then he squared his shoulders, drew a deep breath, and turned away from the eyes that searched his own without knowing that he was there.

"A youngster—very ill," he said quietly.

It is not unlikely that the secret of what he had seen was written in his face, for Thais and Gustave, white to the lips, backed away from that room and away from him as he followed them into the kitchen.

"What's the matter with him?" demanded Boyer hoarsely. "Is it smallpox?"

"Yes," answered Jules.

"Are you sure?" The fingers of Thais locked hard. "The rash?"

"Yes, the rad rash—the delirium—the fever. He is sick to the border of death."

"Let's get out of here!" cried Gustave. "Mon Dieu, I would not stay to eat a mouthful if I were starving! Thank God you did not go in there, Thais!"

Boyer picked up his coat, and that of Mlle. Lanctot; but Guilbault did not move toward his own garment. He remained standing still, staring at them, and striving to clear his mind of a dozen conflicting emotions.

"Wiat!" he commanded. "It looks as if this young fellow were alone. Is he Paquet, or has Paquet fled and left him? Has the chopper a family, Gustave?"

"Name of a name!" cried Boyer. "How do I know? I never saw him and I never was here before!"

"We can tell the priest at Ste. Rose du Degel," said Thais, nervously, divining the thought of Guilbault. "He will send some one. We can get the doctor to come, Jules."

"Undoubtedly," agreed Jules. "Monsieur le medecin and monsieur le cure will both come, as always. But, ma cherie, in the meantime this youngster may die!"

"Can we help that?" asked Boyer. "Let's get out of here into the fresh air!"

"He is in the hands of le bon Dieu," added Thais.

Jules Guilbault, torn by two powerful desires, instinctively reached to his breast. Without being conscious of what he did, he drew out the silver crucifix that he wore.

"A charm will not protect you!" Gustave was becoming excited. "Smallpox is smallpox!"

"It is not a charm," replied Guilbault, looking down confusedly at the work of his fingers. "It is from the shrine of Ste. Anne de Beaupre, and it is only to remind me that le ban Dieu goes with us always——"

"Of course," interrupted Boyer impatiently. "We all know that; but you can catch the smallpox, like any one else. You may be mad, but Thais is not!"

"Whether I catch it or not," said Guilbault, in a voice that was very nearly a growl, "I am not going to leave a man to die alone. No priest, no doctor, no friend with him! Why, this boy should have his mother!"

The eyes of Thais Lanctot grew dangerously bright, and Jules knew well enough that sign. With just such eyes he had seen her drive Henri Papineau, who had made himself objectionable, out of her father's house.

"This is our wedding day, Jules," she said.

"Yes, and the happiest day of my life, Thais; but the man in there is sick. He needs water, fire. It must be hard to die—alone!"

"It is impossible to be married alone," she told him, with a tone that seemed to remove her farther than the distance of the room.

"Ah, my Thais! Have pity upon this poor fellow! The priest will find you a place to stay overnight in Ste. Rose du Degel. He will come or send help by to-morrow, and then I can go to you. It is only a day of our lives—for one who may be dying!"

"And you yourself, by that time, will be filled with the disease! It would be wonderfully fine to have smallpox upon one's honeymoon!"

"I will not catch——" began Guilbault.

"The devil!" cried Boyer. "Do you realize that you are risking giving it to Thais? You do not mind having your face marked forever, perhaps, but Thais——"

"Nom de Dieu!" she interrupted. "He thinks more of this chopper than he does of me! Heaven only knows what it will mean if he stays here!"

"It means that your marriage must be postponed for ten days, or three weeks, or whatever time it is that one waits to see whether he will have smallpox," said Boyer. "If he has it, then there will be more weeks of waiting, at the best. Do not be a fool, Guilbault! Leave now while you have the chance!"

"I shall not catch it; but if I knew that I should, I could not leave this young man."

"Ciel!" from Gustave. "What a fool! Do you know what I would give to be in your place to-day? I would give half my life!"

"You would do better with the opportunity, I believe," murmured Thais; and the light in her eyes grew more dangerous.

Jules Guilbault, suffering as he never had before, looked from his betrothed to his friend and rival.

"Is it because you're afraid of spending an extra hundred years in purgatory if you don't stay?" sneered Boyer.

"I am not staying because I fear," answered Jules slowly, "but because I pity."

Thais turned with outstretched hands, to Boyer. "What shall we do, Gustave?"

Jules saw Gustave's lips draw together with sudden firmness. His eyes half closed.

"This thing has gone far enough," he said, as if he were delivering a final decision. "Thais, what do you want? I care enough for you to make this madman go on to Ste. Rose du Degel with us, if you speak the word. He can be clubbed, if he cannot be reasoned with!"

For the moment Thais Lanctot did not reply. She studied first the face of Jules and then that of Boyer. Guilbault, as he realized the nature and earnestness of Gustaves offer, felt a real danger stirring. Was he not suffering enough from his quarrel with Thais? Let Gustave Boyer keep out of this affair!

(To be concluded.)

Brotherhood.

I planted nasturtiums
I thought for my pleasure
Joy for my home
Golden sun-treasure.
I found I was sharing
Each day of the honey
With a wee humming bird
And bees bright and sunny.
I, as their hostess
Followed along
Humming with them
A bit of a song.
The bees working below
And the birdling above
Thought not to struggle,
To grasp nor to shove
Nor even to visit
A flower with a guest,
But seeing it occupied
Furthered the quest.
How humbly I patterned
My miniature neighbors
Accepting so kindly
These unplanned favors.
The very next time
I plant snares for the sun
I shall plant for many
Instead of for one.
No friendship ere gave me
Full measure of good
As did this, speaking plain
Of the true brotherhood.

—Flora Lawrence Myers.

Equanimity.

One of the best books of Sir William Osler, whose biography by Cushing is a classic in its kind, was his "Aequanimitas," a colection of essays dealing with various phases of the important art or science of seeing life steadily and seeing it whole. Most great leaders in medicine are accustomed to impress on their clients and their colleagues the tonic effect of superfluous worriment. The men of large affairs in any field carry heavy burdens, often shunted off to them by those who seek to escape a responsibility and to avoid a blame. Yet with all they must assume, they breathe an air and wear an aspect of serenity. They get things done because they keep things in their places. They move somehow on schedule time against the odds. Certainly they do not consume in fret and worry the energy that were better spent in fruitful action to a predetermined end. Even the idle folk give to busy people when they look for prompt accomplishment.

Daily we see the moral marvel of those who have every reason to repine and quarrel with their fate, and yet they keep cheerful. Others heap their own troubles and symptoms upon these victorious souls and say to them: "How nice it must be to have no cares!" They assume that the burden-bearers are empty-handed because the weight that is carried is unseen. Often those who have sorrowed oftenest and suffered most are those who proclaim the joy of living and communicate to others the buoyancy and good cheer of their own courage.

Mountain Water.

You have taken a drink from a wild
fountain
Early in the year;
There is nowhere to go from the top of
a mountain
But down, my dear;
And the springs that flow on the floor
of the valley
Will never seem fresh or clear.
For thinking of the glitter of the mountain water
In the feathery green of the year.

When a man can't trust himself he trusts to luck.

are sealed in air-tight aluminum foil. Their fresh flavor is finer than any Japan or Gunpowder. Try SALADA.

SIMPLE AND LOVELY DANCE FROCK.

Classic in the simplicity of its drapery, which admits the uneven hemline so popular on certain types of frocks, is this dance frock of pale pink satin. A delicate line of silver braid edges the skirt draperies, contributing that metallic glint so smart this season. Velvet ribbon in a deeper shade of pink, attached to the right shoulder with a small flower of the same tone, adds another point of interest. The foundation of this model is perfectly straight and plain, the draperies being finished separately and sewn to the frock. The diagram shows the simple design of No. 1268, which is in sizes 16, 18 and 20 years (or 34, 36 and 38 inches bust). Size 18 years (36 bust) requires 4½ yards 36-inch, or 2⅝ yards 54-inch material. Price 20 cents.

The secret of distinctive dress lies in good taste rather than a lavish expenditure of money. Every woman should want to make her own clothes, and the home dressmaker will find the designs illustrated in our new Fashion Book to be practical and simple, yet maintaining the spirit of the mode of the moment. Price of the book 10 cents the copy.

HOW TO ORDER PATTERNS.

Write your name and address plainly, giving number and size of such patterns as you want. Enclose 20c in stamps or coin (coin preferred; wrap it carefully) for each number, and address your order to Pattern Dept., Wilson Publishing Co., 73 West Adelaide St., Toronto. Patterns sent by return mail.

Minard's Liniment for sore throat.

No Charge Whatever.

"Some day,' said the high-browed young man, "I expect to have the world at my feet."

"What have you been doing all this time," sneered the cynic, "walking on your hands?"

A Sample.

Little Betty, who was staying in the country with her grandma, went to the fowl-house to see if there were any eggs. She returned in a few minutes, looking very disappointed, and said:—

"No eggs this morning, grannie; except the one the chickens measure by."

Groundwork of Prosperity.

The cultivation of the land is Canada's greatest resource, and a happy and contented farmer is the groundwork of Canadian prosperity.

AN ENGLISH DOMESTIC DESIGN

Editor's Note—This home, designed by Harold R. Watson, Architect, of Toronto, is one of a series featuring moderate priced Canadian Homes. Copyright 1925, MacLean Building Reports, Ltd.

The alluring appeal of English domestic architecture strikes a responsive chord in the hearts and minds of many who appreciate an attractive home, and the accompanying perspective does much to vividly account for and justify it.

There is no mistaking the architectural origin of escaping the charm of such a blending of stone, brick and stucco; the well sloped, gabled roof; the chimney, leaded glass windows with centre shields; porte cochere at the left and the half-timber and stucco wall in front of the verandah. Equally interesting and pertinent to this delightful type of architecture are the large battened door with wrought iron hardware and the shutters. It is not necessary to strain one's imagination to visualize the effect of the latter, painted a light shade of green, against the stucco background.

The foundations are of local stone carried about two feet above grade and bonded irregularly up the corners and bays. This gives a soft transition from the base to the rug brick which is laid with wide, white mortar joints creating an exceedingly fresh artistic appearance. The stucco second storey is of a light cream tone applied to hollow tile and has a slightly textured surface.

Heavy cedar shingles, stained a pastel, purple grey and laid irregularly, make an attractive roof and a very interesting and inexpensive effect may be obtained by the judicious use of a few shingles dipped in blending but brighter tones.

Mentioning such a little detail as the golden brown stain used on the half-timbered beams of the verandah, porte cochere and overhangs may seem a bit "de trop" but it is far more important than is generally realized. It is never advisable to tamper with a qualified architect's color scheme.

The selection of red quarry tile for the verandah floor combines durability and brightness where they are very much needed. There is no doubt of the "antagonism" of this material toward wear and tear and yet its color lends such cheerfulness to the entrance approach as to make it suggestive of the welcome that awaits within.

Further evidence of the thought given to first impressions, as well as the comfort of the owner and family, is the porte cochere with driveway passing under it, making it possible to leave or enter a car without undue exposure to inclement weather.

While it is not possible to illustrate the other elevations of this home, the name and reputation of the architect suffice to guarantee that the rear and sides have been well looked after and not sacrificed for a catchy front.

The floor plans show a very commodious yet compact layout.

Beginning downstairs, the hall is 6 ft. 6 in. wide and from it one may go direct to the rear porch without passing through rooms or turning endless corners. A large coat closet is provided at the right.

The living room, 13 ft. x 21 ft., is entered through French doors and the first thing to attract attention is the fireplace with its well proportioned mantle of Indiana limestone and brick. Well placed window openings add much to the effect of this room.

Leaving the living room and crossing the hall, through French doors again—you are in a dining room, 13 ft. 10 ins. x 15 ft. You know at once that there need be no moving of chairs or gymnastic performances on the part of the maid to enable her to perform her duties. The woodwork of this room, also living room and hall, is quartered, figured gumwood.

Separating the dining room from the kitchen is a delightful little breakfast room with built in seats and table and a large china closet—and such a lovely kitchen.

It is 12 ft. x 9 ft. and has a blue and white tiled floor, generous cupboard, built in sink and a large, low group of windows overlooking the garden. Refrigerator space is provided in the rear hall, convenient to the kitchen and service entrance.

On the second floor is a large bedroom, 13 ft. x 21 ft., designed for two beds. There are two clothes closets and a dressing alcove. The other two bedrooms are 13 ft. x 13 ft. and 9 ft. x 12 ft., and have ample closet space.

The bathroom is 6 ft. x 8 ft. and has tile floor and walls, built in bath with shower over, pedestal basin and built in medicine cabinet.

Two more bedrooms and another bathroom are provided for in the attic and, taking rather a "sudden drop," the base ment has two brick dividing walls which completely separate the hot water heating unit from the laundry, drying room and fruit rooms.

All floors, except in the kitchen and bathrooms, are of quarter cut white oak and the walls of the bedrooms, kitchen, and bathrooms, above the tile, are done in different shades of grey enamel.

What a home! So faithfully typical of its type; so distinctive in design and practical in plan. Need your responsiveness be limited to desire? It can be built for approximately ten thousand dollars—a remarkably moderate cost.

The dimensions are 33 ft. wide, exclusive of the port cochere, by 30 ft. 3 ins. long, and allowing for the driveway and service walk, a fifty foot lot is really required, and this is important—it should face the south. If a corner lot, it should be the north-east one.

Don't overlook the landscape work; trees, shrubs, flowers, flag walks and well kept lawns. Such a delightful "picture" deserves an attractive "frame."

MAKING A SUCCESS WITH POULTRY

BY L. E. CARD.

It is during January that the farm poultryman who wants to get early chicks begins to mate his breeding pens. The commercial poultryman also is likely to mate most of his flocks this month.

In many cases the females will have been culled some months before, so there is little selection still to be practiced except for the purpose of mating a small special pen from which to produce cockerels for use in next year's breeding flocks. When possible such a special mating is always to be advised, as it insures more rapid progress than can be made from general flock matings.

One should see to it that only the very cream of the breeding flock is chosen for this special pen. It is better to have only half a dozen females of excellent quality than to use a dozen or fifteen, when by so doing several of only fair quality must be included.

The male to head such a pen should be an outstanding individual among those raised at home or may be purchased from stock of known performance.

Remember that the influence of this male will not be fully seen until the fall of 1927, when the pullets sired by his sons come into laying. With this in mind it is well to spend considerable time, effort, and money if necessary, to get the right kind of male for the special breeding flock of 1926.

THE BREEDING LABYRINTH.

When selecting males to be used in the general breeding flock it is well to keep in mind that as far as possible the cockerels put into any pen should be males that have been running together for some time. If this is done there is little likelihood of their fighting enough to injure one another seriously.

If conditions are such that strange males must be used in the same flock, or if considerable fighting is in evidence, there are at least two ways out of the difficulty.

One is the plan of alternating males. By this plan half the males are allowed with the flock for one, two or three days, at the end of which time they are cooped for a corresponding period, during which the rest of the males are turned loose with the hens. This usually means that a combination can be found which will result in a minimum of fighting.

The other method in the case of fairly large flocks is to use what is known as a breeding labyrinth. It consists of boards or panels twelve to eighteen inches wide and long enough to reach about three-quarters of the way across the pen. These are set on edge and supported so there is six inches clearance between the litter and the bottom of the boards.

The number of such boards or panels to be used will depend on the size of the pen or house. The effect of the panels is to divide the floor area into a number of units while still permitting the birds to have the freedom of the entire house. The result is more or less seclusion for the males during mating, and consequently less fighting and much less interference.

CARE OF THE MALES.

It often happens that the male birds do not get sufficient grain feed because the hens are fed relatively small quantities in proportion to what the males should eat, and because many males will spend so much time calling the hens to eat that the grain is gone before they themselves have eaten anywhere near enough.

Under the plan of alternating males this is avoided because the males can be fed liberally on grain on the days they are confined to the coops. When the males are running with the flock continuously it is well to provide a special feeding place to which only the males have access and in which is kept a constant supply of grain.

A small hopper set high enough to be out of reach of the hens will solve the problem in many cases. Many poultrymen train the males to fly up to the dropping board or other support for a special allowance of grain at the time the hens are given their evening feed.

This plan is not always practical in the case of busy farm folks, but is highly effective when it can be put into use. When a long breeding season is planned some such scheme must be followed in order to keep the males in good flesh and to insure a high degree of fertility throughout the hatching season.

JANUARY PRODUCTION.

Some time this month, in most sections of Southern Ontario, the egg-production curve may be expected to start its climb toward the spring peak. This is equally true of hens that have molted and of healthy pullets that were hatched a little too late to begin laying before winter set in.

So it can hardly be considered good business to sell off hens or pullets now unless they are obviously too crowded in their winter quarters. Hens or pullets that are going to lay at all in the year 1925-26 will do so between now and July first. They may not have paid for their keep from November first to date, but there is a much better chance of making their account come out even if they are kept through the spring season than if they are marketed now.

The flock owner cannot afford, therefore, to become unduly dissatisfied with feed or egg prices, or with present egg production, until the flock has had an opportunity to show a profit by reasonably good production from February to June.

In the vast majority of flocks the period of greatest cash income is also the period of highest egg yield in spite of the fact that the price of eggs per dozen is lower then than at any other time during the year. It naturally follows, therefore, that high spring and summer egg production is well worth working for.

WILL BE PARSEE HIGH PRIEST

Dr. Jal Dastur C. Payry, who, on his father's death, will become spiritual head of the Zoroasters, comprising a million of India's most cultured natives. On receiving his degree from Columbia University he started for home. He is only 26.

Forage Crops in Northern Ontario.

Most forage crops thrive in Northern Ontario. Clovers, alfalfa, sunflowers, annual hays, turnips and the common grasses have given good results to date. Corn and mangels have not done as well, according to the report of the Superintendent, Mr. Smith Ballantyne, of the Kapuskasing Dominion Experimental Station.

In 1923 and 1924 the average green weight of Russian Giant sunflowers was 18 tons, 340 lbs. and of dry weight 2 tons, 1,045 lbs. Of corn the Superintendent speaks hopefully, pointing out that although the crop was not heavy, the fact that each of seventeen varieties gave a yield of over 5 tons to the acre of green material indicates that some day corn may become a fairly reliable crop.

A variety test of oats for annual hay has been carried on for three years at the Station. The average yield of Abundance during that time of green weight was 5 tons, 1,780 lbs. and of dry weight 2 tons, 346 lbs. per acre. In 1923-24 the average yield of O.A.C. No. 72, the only years in which it was tested, was 5 tons, 190 lbs. green weight and 2 tons, 385 lbs. dry weight per acre. Thirteen varieties of oats were seeded on June 9 and yielded from 5 tons, 290 lbs. by Daubeney up to 6 tons, 940 lbs. by Abundance, green weight per acre, and from 1 ton, 1,489 lbs. by Daubeney to 2 tons, 765 lbs. by Victory, dry weight.

In a test of four varieties of peas as annual hay in three years the average of green weight by Canadian Beauty was 9 tons, 823 lbs. and 2 tons, 468 lbs. dry weight. Arthur did better in green weight but not so well in dry weight. The average of Golden Vine was less in green weight and better in dry. Black Eyed Marronfat topped all in the two-year average but fell off rather badly in 1924. Peas, says the Superintendent, serve their best purpose when sown in a mixture with oats or oats and vetch.

Results indicate that vetch as a crop gives fairly large yields, but that like peas, its best use is for sowing in mixtures for either hay or silage.

In 1924 White Blossom, Yellow Blossom and Hubam sweet clover sown on June 5 at 20 lbs. per acre yielded respectively: 7 tons, 650 lbs., 3 tons, 980 lbs., and 5 tons, 1,820 lbs. green weight and 1 ton, 1,587 lbs., 1,953 lbs., and 1 ton, 1,092 lbs. dry weight.

Winter Eggs and the Feed Bill.

As all experienced poultry keepers know, the feed bill makes heavy inroads on the returns from the egg basket during the winter months. Eggs cannot be produced without nourishing food and that provided in suitable mixture. The feeding of poultry has been under experiment at the Experimental Farms for many years and from the knowledge gained in this work very safe conclusions can be reached. In a bulletin entitled "Poultry Feeds and Feeding" recently issued by the Dept. of Agriculture at Ottawa, the subject of poultry feeds and the methods of their use are very fully reviewed. Mr. Geo. Robertson, the assistant Dominion Poultry Husbandman, has been very closely attached to the feeding experiments carried on, particularly at the Central Farm. The various classes of grain, animal and green foods as well as mineral foods are discussed in a practical way and the compounding of rations from these is given due consideration in the bulletin which is available at the Publications Branch of the Dept. of Agriculture at Ottawa. On the feeding of pullets for heavy egg production, the bulletin states that grit, oyster shell, charcoal, and dry mash should be kept in the hoppers constantly before the flock. Fresh water is equally necessary at all times and when it is available sour milk should also be supplied. In the morning a light feed is recommended and in the evening a full meal of mixed scratch grain should be given in the litter. For green feed alfalfa or clover hay constantly supplied is of great value and sprouted oats or roots should be given daily. Of the roots mangels are most acceptable to the birds. These are stuck on nails about the house and the hens pick them as they desire. If turnips or carrots are used they have to be pulped and mixed in a moist mash. Additional foods that will help the egg yield include green cut bone or raw liver mixed in the moist mash at the rate of about one-half ounce per bird from time to time. The bulletin deals equally clearly with the feeding of chicks as well as stock birds and those that are being fattened for the market.

Improvement in Horse Breeding.

Statistics show not exactly that the horse is coming back, but rather that recognition is obtaining more and more ground that its usefulness, despite the advance of machines, has by no means disappeared. Its presence even in cities and towns is becoming more noticeable, especially for delivery purposes as well as for riding and for entertainment at shows; saying nothing of the agricultural aspect, which is the greatest and most important of all.

Field Marshall Lord Haig in his reports and his unofficial writings testifies to the fact that for military service the horse is more than ever indispensable on account of its great mobility, for its ability to overcome difficulties that the intricacy of machinery can never surmount.

To encourage the horse-breeding industry the federal Dept. of Agriculture through the Live Stock Branch has adopted a policy for the encouragement of club formation by which the use of pure-bred, healthy stallions is ensured. By this policy clubs, providing they fulfill the conditions set forth, receive back one-third of the total amount paid by their members for the service of such stallions.

That the policy is attaining its object is proven by the statement that the Minister is able to make in his Report for 1924-25, that during the year there was an increase of over thirty-three per cent. of clubs operating under the Federal Assistance Policy and that greatly increased interest was shown by horse-breeders, particularly in the western provinces. Horsemen, he says, are awakening to the fact that in order to meet the needs of future years, they must begin breeding now.

The policy not only guarantees the use of healthy pure-bred stallions, but also that their services shall be obtainable at reasonable fees, the conditions providing that such fees shall be not less than twelve dollars and not more than twenty-five. This, continues the report, coupled with the use of the best mares, together with better feeding, care and management of sires, dams and colts, is surely making for the improvement of Canadian horses, both heavy and light.

It might be added that the policy is leading to a demand for our native horses for service abroad, as is proven by recent enquiries received from Europe.

My Bread is Always Good.

My bread-making troubles ended when I started using a home-made raiser. The manager of a chain of bakeries told me that temperature is the secret of good bread. "The average baking doesn't have enough heat during the raising process," he explained. "Bread dough in the pan needs an even 80 degrees."

That started me to thinking and with my husband's help I built a raiser. In principle it's similar to a wholesale baker's proof box—a square cabinet about the size of a small ice box made from matched lumber. On two sides, just above the bottom and directly beneath the top, holes are bored for ventilation.

The box is divided into three compartments. The upper and largest compartment holds a big bread pan full of dough—eight loaves tucked side by side. A narrow shelf in the middle is for a pie pan of warm water to provide humidity. Humidity prevents a crust from forming on the dough and also helps to give the bread better color when baked. The lower section has one of those little kerosene stoves that burn two weeks with one filling of oil. This stove is used principally to "raise" baby chicks, but it also serves to raise the staff of life. With this raiser I always have exactly the right temperature for my bread without regard to the weather.—F. P.

Chestnut Pudding.

One pound chestnuts, ½ pint fresh cream, 2 tablespoonfuls of fine sugar.

Peel the chestnuts. To take off the inner skin boil them in hot salted water for about 5 minutes; be careful to keep the water hot, otherwise it is very difficult to remove the second skin. While the chestnuts are still warm, put them through the potato masher and then place them in a glass dish. Add the sugar to the cream, beat it until stiff and cover the chestnuts with it.

Have the ewe gain at least 15 pounds while pregnant—20 pounds is better.

Short of wood or coal? Clean up some of the trash in the fence corners and burn it. There is no economy in a tumbledown fence.

BAROMETER HOUSE

Two quaint little people lived in a quaint little house. There were two little doors, one for each, and very particular they were never to go in and out at each other's doors.

The little man would come to his door and look out.

"Dear me," he would say, "what dismal weather! What a lot of clouds there are!"

Then he would go a little farther out, and a little farther.

"The farther I look, the more clouds I see!" he would exclaim, and the strange part was that the more clouds there were, and the more rain there fell, the more the little man would stay outside his door, until he was so wet that he had to go in again.

While the little man was looking out of his door, the little woman was as busy as could be indoors, cleaning the house, and polishing everything that could be polished, until it was as cozy as possible when the little man came in again. Then the little woman would say:

"Now, I am going to have a look out of doors."

So she would go to her little door and peep out.

"It is going to be quite fine, I am sure," she would say. "Why, there is a little bit of blue sky between the clouds! I'm just going out a bit farther, to see if there is any more blue." And the strange part was that the farther the little woman went outside her door the more blue sky there was to be seen, and she smiled and enjoyed the sunshine until it was time to go indoors again.

The little man would sit in his chair drying himself by the fire, and nodding his head until he fell asleep.

It generally happened that the little man and the little woman were not at home at the same time. Sometimes, however, when the little woman was coming in from her outing in the sunshine, she would meet the little man just coming to his door to have a look out of doors. Then they would stand in their own doorways and have a little chat.

"It's always wet when I come out," said the little man one day, when he met the little woman coming in. "I declare, I've hardly ever seen any blue sky or sunshine, unless it is in the spring when there are sudden showers."

"Oh, nonsense!" exclaimed the little woman. "It seems to me that it is always fine. The sky is so often a beautiful blue, and the kind sun shining."

"That is what I cannot make out," said the little man. "Whenever I see you to talk to, you say, 'What lovely weather we are having!' and I go out to have a look and find it gray and dull and raining."

"Now that's very strange," said the little woman, "I wonder why that can be?"

"When I come indoors," said the little man, "I just sit by the fire and go to sleep to forget about the clouds, and when I wake again, I go out to see if they are still there—and they always are," he sighed.

The little woman was silent.

"What do you do indoors?" asked the little man.

The little woman smiled and said: "Why, I feel so happy and bright after seeing all the sunshine, that I try to make it look the same way indoors! I rub and polish until everything shines like the sun, and is as clean as the blue sky! You see," she added gently, "the sun is always shining away behind the clouds, and it seems to me that it only needs someone to clean away the clouds to see the sunshine and blue sky all the time. I love to clean away the indoor clouds, too, and have everything shining."

"Well, the clouds are there to be cleared away," grumbled the little man, "heaps and heaps of them."

"And I just won't look at them," laughed the little woman. "I keep looking right through them until I see the sunshine and there is not a cloud left!"

WINTER GAMES FOR YOUNG CHILDREN

Children can be interested in quiet games and creative occupations. The following ideas were suggested at a meeting of a women's club.

The making of a paper town is an interesting occupation made possible by the use of old envelopes. These the father may be able to save for the children if he is careful to slit the envelopes in his incoming mail carefully across the end with a knife or scissors. Plain pieces of white paper can be pasted over the name and address, making a plain white envelope which will stand up on end if you open it a little way.

By using different-sized envelopes the houses will be of different sizes, and the larger ones can be used for the stores, post office, schools and churches. With a ruler and pencil, mark windows and doors on the envelopes and then cut them out carefully. Little curtains of tissue-paper might be hung at the windows by pasting carefully on the inside of the envelope, and across the windows. With colored pencils, "paint" the houses different colors. Brick and stone houses can also be made in this manner.

Colored pictures of vegetables can be cut from old magazines and pasted in the grocery store windows, a row of shoes in the shoe store window, or books for the book store. Strips of brown paper should be used for the streets and brightly colored flowers and trees should be pasted along the sides. There could be a city park with fountain (cut from a magazine and pasted to a stiff cardboard back. Automobiles could be parked in front of the houses, and paper children might make their way to a paper schoolhouse. A railroad station with freight cars and locomotives would appeal to boys.

ANIMATED DOLLS.

When the children tired of the paper town, one family tried the "animated doll family." For this take several heavy wire hairpins, straighten them out and then bend one end over until it resembles a shepherd's crook. Hang the pins on the edge of a table, lap-board or chair (wherever they can swing freely) and they will swing back and forth many times with just the slightest touch or jar of the table. Then from old magazines and papers cut men, women and children, and, with a little glue, paste the "cut-outs" to the wire hairpins. Animals, birds and butterflies can also be used in this way. Blowing gently across the figures will cause the hairpins to bob around in a way that is very amusing to small children.

Plastic clay sculpture is another popular pastime. Plastic clay in different colors can be obtained in boxes of different sizes, ranging in price from 10 to 50 cents a box. Pictures of different objects that can be molded are also included in the box. Even a very young child enjoys work with clay.

Making necklaces appeals to girls. A few cheap glass beads and some melon, pumpkin and sunflower seeds, dried and saved from the year before by the thoughtful mother, will provide quiet entertainment for several happy evenings. The seeds can be strung through the small end, placing a bead between every two or three seeds. They can also be strung through each end, making two threads through the entire string, first placing a bead and then a seed, and so on.

A PICTURE GAME.

The matching game can be made with old seed and flower catalogues. Allow the children to choose and cut out as many pictures of different kinds of flowers and vegetables as they can. The children then all gather around a table with their pictures. The first player puts down a picture from his pile—a picture of a tomato, perhaps—and all the other players try to match this by putting down pictures of tomatoes from their hands. When all have played, the first player gathers up all the pictures that have been played on his pile and the next player lays down a picture of a vegetable or flower, which all try again to match; the second player gets all the pictures that follow his lead. The loser is the one who holds the largest number of pictures at the end of the game.

Use a Pinch of Salt.

Salt is something we just couldn't get along without as seasoning for our food. But this mineral also has many other uses about the home that many housewives have not yet discovered.

Ivory or celluloid objects may be cleaned and whitened with a slice of lemon dipped in salt. After this rubbing is done, they may be washed in the usual way.

A cement for filling in floor cracks may be made by using equal parts of salt and alum mixed to a paste with boiling water.

We all know how withered apples become during the late winter, especially if they have been out of the cellar long. Their freshness may be restored by soaking them in a crock of brine made by mixing two rounding tablespoons of salt with a gallon of water. Change the brine every six hours until the apples have become fresh and plump.

Rubbing the pan or kettle in which onions have been cooked, with salt, will remove all disagreeable odor. The smell of gasoline may easily be removed by the same method. Iron rust stain may be taken from fabrics by rubbing the spots with salt and lemon juice and laying it in the sun to bleach. Salt will remove tea stains and other discolorations from chinaware. Salt sprinkled on a fine woolen cloth makes an excellent polisher for mirrors. Equal parts of salt and flour, mixed to a paste with vinegar, makes a fine polish for brass or copper. Rub it on with a soft cloth, then wash with a soft brush, dry and polish.

A pinch of salt added to the sugar for icing will prevent the icing from graining. A pinch of salt in a pot of cocoa will greatly improve the flavor. A handful of salt thrown on the stove where fruit has boiled over, will greatly lessen the odor, and will also make it easily cleaned.—N. P.

Pretty late to put the machinery under cover, but better late than never.

Trappers attention: Taking an unprime pelt is a deliberate waste of one of Nature's most valuable and beautiful gifts.

MOLDED AND FLARED LINES DOMINANT.

Fashion cuts her collars high and her sleeves long, and both will lend charm and distinction to your frock. The simple severity of the erect collar is youthful and imparts chic to this frock, the upper part of which is fashioned on princess lines, closing at the left shoulder under a row of tiny buttons. There is plenty of movement, as Lelong would have it, in the cut of the circular skirt. The model pictured here emphasizes the vogue for color and fabric contrast, the bodice being developed in satin or metal cloth and the skirt in velvet. Wide ribbon in a rich brocaded design is tightly drawn about the hips before being tied in a loose bow at the left side. No. 1254 is in sizes 16, 18 and 20 years (or 34, 36 and 38 inches bust only). Size 18 years (36 bust) requires 4¾ yards 36-inch, or 3⅛ yards 54-inch material. The sash requires 2¾ yards ribbon 5 inches wide. Price 20 cents.

Our Fashion Book, illustrating the newest and most practical styles, will be of interest to every home dressmaker. Price of the book 10 cents the copy.

HOW TO ORDER PATTERNS.

Write your name and address plainly, giving number and size of such patterns as you want. Enclose 20c in stamps or coin (coin preferred; wrap it carefully) for each number, and address your order to Pattern Dept., Wilson Publishing Co., 73 West Adelaide St., Toronto. Patterns sent by return mail.
