MORRISBURG—ONTARIO

FISHER—FAWCETT

A very pretty wedding was solemnized at the home of Rev. and Mrs. W. E. Hamilton, Ottawa, on Wednesday Aug. 7th, when Laura Pearl, second daughter of Mr. and Mrs. F. A. Fawcett, was united in marriage to Harold Oliver Fisher, Shawville, Que., son of Mr. and Mrs W. J. Fisher of Morrisburg.

The bride looked pretty in her wedding dress of pale pink satin, trimmed with self georgette, pink felt hat, white pumps and stockings to match, and white flannel coat, to complete the costume. They were attended by Mr. and Mrs. Lawrence Davidson. After the ceremony, they journeyed to Shawville, where they will reside in the future.

MORRIS—HARKNESS

A quiet marriage was solemnized at Bloor Street United Church, Toronto, on the evening of July 31st, when Pauline Hamilton, only daughter of Mr. and Mrs. Arthur Harkness of Iroquois, became the bride of Norman Leslie, eldest son of Mr. and Mrs. Wm. Morris of Moose Jaw Sask., late of Essex, Eng. They were attended by Miss Edith Armstrong and Mr. Harold McDonald, with Rev. G.L. Pidgeon, D.D., officiating. Following the ceremony Mr. and Mrs. Morris left on an extended tour of the Western Provinces.

NO BLAME ON MOTOR DRIVER FOR ACCIDENT

Probing a death which occurred more than three months ago, a coroner's jury at Morrisburg, Tuesday heard evidence regarding the death of Mrs. Frank Hutt, who was struck and killed by an automobile driven by Thomas R. Parker, Oshawa, on the highway east of Morrisburg on the night of April 13. A verdict of accidental death was returned by the jury, with a rider exonerating Parker of all blame.

Evidence of a number of witnesses was to the effect that Mr and Mrs. Hutt and their daughter, Leona, were walking east on the highway during a snowstorm. An umbrella was being used to shield them from the storm, and they were walking on the left or north side of the road. A car driven by Jesse Duval, Williamsburg township, passed them going east a few seconds before Parker's car approached from the east.

Duval's evidence was to the effect that after passing the trio on the road, he realized that the car proceeding in the opposite direction would probably strike them if they continued to walk where he had seen them. He heard a thud and turned to see Mrs. Hutt half sitting on the front fender of the car and Miss Leona lying at the roadside. He returned and gave assistance as did Parker, who stopped in a short distance. Mrs. Hutt died at the home of a nearby farmer within a few minutes, and Leona suffered a broken leg and other injuries. Parker testified that he estimated his speed at the time, as 25 miles an hour, and said that the umbrella rendered the trio almost indistinguishable on the road. He was also dazzled by the lights of Duval's car.

Coroner P. J. Mulloy, Morrisburg who was in charge of the inquest, said that Mrs. Hutt died from a fracture of the neck. J.G. Harkness, K.C., Cornwall, represented the Crown; Arthur Flynn, Morrisburg, the Hutt family and J. McLaren, Brockville, appeared for Parker.

SHOWER

On Tuesday evening, a large number of friends and relatives of Miss Gladys Whitteker of Williamsburg and Mr. Gordon Smyth of New York City, formerly of Williamsburg gathered in Froats Hall and gave them a shower in honour of their approaching marriage. The evening was spent in dancing. At suppertime B. Roy Casselman read the following address and Miss Ruby Barkley presented them with a purse and many other gifts.

THE ADDRESS:—

Dear Gladys and Gordon;—

A large number of your friends and relatives is assembled here tonight to participate in a few hours of social functions and to manifest the high respect in which you are held in this community.

Now that you are at the eve of matrimony, we trust that the long avenue through your future life will be illuminated with Health, Happiness and Prosperity.

Gladys, it is an extreme pleasure for us to know that you have secured a source whereby to work out your life plans, where we feel confident that many pleasures await you. You have always associated with us in a cheerful friendly spirit, thus winning a host of friends and after all, what is more pleasing than a host of friends. We sincerely regret that you have found it necessary to move from our midst, but we realize what is our loss is someone's gain.

Gordon, we appreciate your presence this evening; it recalls the many associations we had while you resided among us. We are glad to know you have deemed it best to come to Williamsburg for your life partner, whom we relinquish with but one request; although you are taking Gladys to New York City, we want you to bring her home occasionally to see us.

We extend to you our best wishes in these few brief words:

"May the future hold for both of you
A satisfying occupation,
Loyal and appreciative friendship
And an environment of beauty."

As a further evidence of our friendship and good will, we ask you to accept these gifts as remembrances of your Williamsburg friends and relatives.

Miss Whitteker responded in a few appropriate words, thanking all her friends, and hoped they would be able to come and see her in her new home.

Lunch was then served and dancing was resumed until the wee hours of the morning.

HUDSON TREVOR ALLISON

Relatives received word yesterday of the death at Ocean Beach, Me., of Hudson Trevor Allison, son of the late Hudson Allison, who lost his life in the Titanic disaster, the dead boy having been rescued with his nurse. The cause of death is said to have been ptomaine poisoning. Trevor Allison, who was nineteen years of age, spent the weekend in Boston, his illness developing quickly after his return, and although specialists were quickly in attendance, their efforts were of no avail.

The remains were brought to Chesterville today, (Friday) and the funeral held from the station on the arrival of the 9.40 train from Montreal, with interment in Maple Ridge cemetery.

FOUR STUDENTS CROSS SEA IN 46-FT. KETCH

The 46-foot ketch Carlsark dropped anchor in the harbor at Horta, Azores, on Monday evening, with its crew of four amateur sailors, who were all Cornell university men.

The skipper, Carl L. Weagant of Douglaston, L.I., Cornell football manager last year, declared that his three companions had not suspected that they were crossing the Atlantic until more than half of the distance had been covered.

"We left New York secretly last June and sailed up the St. Lawrence We reached Nova Scotia and left there on July 22. My crew of D. N. Schoales, J. M. Rumnler and H. H. Devereux, did not suspect my intention of crossing the Atlantic until we were half-way to the Azores, seven days out.

"Twelve days of good weather made a splendid journey for us. We intend to leave Fayal to-morrow and proceed by way of San Miguel and Gibraltar to the Mediterranean, returning by way of the Canary Islands and Cape Verde. Our provisions lasted well, and we obtained fresh fish from the Newfoundland fleet"—Mail and Empire.

Carl Weagant, with his friends, stopped one night at Morrisburg on their sailing trip down the St. Lawrence in the Carlsark about a month ago. He was accompanied here by his father, Mr. Roy A. Weagant, who was born in Morrisburg, and has become famous for his invention of a means of eliminating static interference and other radio work. He remained some days here seeing old friends and relatives, while the boys continued their sailing trip to the lower St. Lawrence.

OUR ELECTRIC SERVICE

Dear Fellow-Citizens:

By reason of several severe wind storms, our electric lines, weakened by age, have caused several interruptions of service, which were unavoidable. We have known for years that our lines and poles were old, and that changes would have to be made. We are endeavoring, by a joint pole line agreement with the Bell Telephone Co., to have both new poles and new transmission lines on Main and a number of other streets. During the period necessary to stretch the new primary lines, the service will, of necessity, be interrupted after 8 a.m. of each working day. We cannot ask the workmen who climb the poles to work among lines carrying 2200 volts. It is too dangerous. The work is dangerous enough without this added risk of live wires. The Council is earnestly endeavoring to put the service in good condition, beginning with Main Street and going as far as we can this year. We ask the patience and co-operation of our consumers, and pledge them the work will be done as expeditiously as possible. The current will go on each evening at 5.30 o'clock.

We are having all meters (meters only) and all fused services examined and resealed. We desire to call those who have fused services that if the sealed service is tampered with the current will be cut off and will not be reconnected until the consumer contracts for and has installed a meter. If you have any complaints or suggestions, please send them to J.M. Whitteker, Treasurer, or the undersigned.

I. HILLIARD,
Chairman, Electric Service.

TO THE MUNICIPAL COUNCIL VILLAGE OF MORRISBURG

Certain members of the Village Council have publicly stated that George Brown had papers belonging to the Village (plan and profile of the Morrisburg Award Ditch) that he would not give up.

The papers referred to were not in the possession of George Brown, but were eventually located in the Clerk's Office, where they belonged.

Owing to the town's poor facilities for fyling documents at the Clerk's Office, it was only after a thorough search that these papers were found.

If the said members of the Council are honest and possess the traits of manhood they are supposed to possess, they will publicly retract that statement.

PARTICULARLY PLEASING.

An exquisite dress of georgette crepe in flattering lettuce green shade, flutters into fashion with its circular skirt at front gathered at top and attached to a slightly bloused waist under a removable sash. The back is perfectly straight. For general daytime wear, choose flat silk crepe in pastel shade, shantung in jonquil yellow shade, dimity in red and white, silk pique in sky blue, challis print, printed voile or printed rajah. Design No. 753 only requires 3 yards of 36-inch material with ¾ yard of 36-inch contrasting, for the 36-inch size. Pattern comes in sizes 16, 18, 20 years, 36, 38, 40 and 42 inches bust measure. Price 20c in stamps or coin (coin preferred). Wrap coin carefully.

HOW TO ORDER PATTERNS

Write your name and address plainly, giving number and size of such patterns as you want. Enclose 20c in stamps or coin (coin preferred; wrap it carefully) for each number, and address your order to Wilson Pattern Service, 73 West Adelaide St., Toronto. Patterns sent by an early mail.

Fear and Conduct

Robert Lynd in the London Daily News and Westminster Gazette (Liberal): (Abel Gance, a French producer, is preparing a film which will depict the end of the world, in which poor mortals will be stripped of their everyday disguises and will be exhibited in a state of spiritual nakedness through fright.) I doubt, however, whether M. Gance's preliminary assumption is true. It is no more true that a man reveals his true nature under the influence of fear than that he does so under the influence of drink. You can take almost any test of a man's true nature—his attitude to money, his behaviour when in love, his treatment of superiors or subordinates—and each of these will tell you something about him. Any of them, indeed, will tell you rather more about him than his conduct when he is stricken with panic.

Tasty Recipes

ALMOND CAKE.

Ingredients—6 oz. of ground sweet almonds, ½ oz. of pounder bitter almonds, 6 oz. of castor sugar, 3 oz. of butter, 1 lb. of flour, 4 eggs, essence of lemon. Method—Break the eggs into a clean bowl, add the sugar, previously warmed, and beat the mixture well together with a wire egg whisk until it is as thick as cream. Add the butter (melted), mix in the almonds, flour (sifted), and essence of lemon with a spoon. Grease a plain mould, fill it with the mixture, and bake in a steady oven. It will require from 1½ to 2 hours to bake, and great care must be taken to prevent the mixture burning. As a precaution, it is advisable to lay 3 or 4 thicknesses of newspaper under the mould, and wrap the same round the sides, fixing the paper in place with a piece of twine. Time—About 2 to 2½ hours. Sufficient for 2½ lb. cake.

APRICOT MOULD.

Ingredients—1½ pints of milk, 2 oz. of ground rice, 1 oz. of castor sugar, 4 tablespoonfuls of apricot jam, or ½ gill of apricot pulp, and ½ gill of cream. Method—Bring the milk to boiling point, sprinkle in the ground rice, and simmer for about 10 minutes. Dilute the jam or pulp with a tablespoonful of hot water and press it through a sieve or strainer into the stewpan. Add the sugar, and when well mixed pour the preparation into a wetted border mould. Let it stand until set, then turn out, and pile the stiffly-whipped sweetened cream in the centre. Time—From 25 to 30 minutes. Sufficient for 5 or 6 persons.

BEANS, FRENCH OR KIDNEY, BOILED.

Ingredients—French beans, salt, pepper, a small piece of soda. Method—Cut off the heads, tails and a thin strip on each side of the beans, so as to remove the string. Cut the beans in a slanting direction into slips and, as they are cut, drop them into cold water. Have ready a saucepan of boiling water, and 1 heaped teaspoonful of salt to each quart of water, and a small piece of soda if the beans are old. Put in the beans, keep the saucepan uncovered, and boil briskly for about 15 to 25 minutes, according to age. Drain well, sprinkle with pepper, then serve. Time—To boil the beans, about 15 to 25 minutes. Seasonable from July to October.

MACARONI CHEESE.

Ingredients—4 oz. of macaroni, 2 oz. of grated cheese, 1 oz. of butter, ½ oz. of flour, ½ pint of milk, ½ a teaspoonful of made mustard, salt and pepper to taste, brown breadbrumbs. Method—Break the macaroni into small pieces, put them into slightly-salted rapidly boiling water, boil until tender, and drain well. Melt the butter in a stewpan, stir in the flour, add the milk, and boil well, stirring continuously. Now add the macaroni, cheese, mustard, a liberal seasoning of salt and pepper, and mix all well together. Have ready a well-greased fireproof dish, turn the mixture into it, sprinkle the surface with brown breadcrumbs and grated cheese, place a few small pieces of butter on the top, and bake in a quick oven until nicely browned. If preferred, the mixture may be cooked in scallop shells or ramakin cases. Time—About ¾ of an hour. Sufficient for 1 dish.

YORKSHIRE GINGER CAKE

Ingredients—1 large or 2 small eggs, ¼ pint of cream or less of milk, ½ lb. of butter, ¼ lb. of castor sugar, 1¼ oz. of ground ginger, 1 lb. of flour, salt. Method—Whisk the egg thoroughly, add the cream, and beat these together. Put the mixture into a saucepan, stirring till warm; add the butter, sugar, and ginger, carefully stirring over a very moderate fire. When the butter has melted, stir in the flour, adding salt, and make into a paste (the flour must be fine). Roll out the paste and cut it out with a plain round paste cutter on to greased flat tins, and bake in a moderate oven. Time—About ¾ of an hour. Sufficient for 1½ to 2 dozen small cakes.

MAKE HASTE

Gather roses while they blossom; to-morrow is not to-day. Allow no moment to escape ,to-morrow is not to-day. Today is the opportunity for enjoyment and work. Knowest thou where thou wilt be tomorrow. Time flies swiftly away. Procrastination of a good deed has often brought repentance; to work while it is called to-day is my advice; time flies swiftly away.—Gleim.

HOME

Something like home that is not home is to be desired; it is found in the house of a friend.—Sir W. Temple.

Minard's Liniment for aching joints

THE "CANARY" MURDER CASE

© Charles Scribner's Sons

By S. S. VAN DINE AUTHOR of THE BENSON MURDER CASE

THE STORY THUS FAR:

"The people I know don't shut themselves in clothes closets," said the finger-print expert. "You positively amaze me," declared Vance. A few minutes later finger-prints were found on the inside door knob of the closet in the apartment in which the beautiful Margaret Odell had been found strangled. But the amazing Vance declares the prints will not lead them to the murderer.

CHAPTER VII.

(Tuesday, Sept. 11; 10.30 a.m.)

Markham and Heath and Vance and I were now alone in the apartment. Dark, low-hanging clouds had drifted across the sun, and the gray spectral light intensified the tragic atmosphere of the rooms.

Markham had lighted a cigar, and stood leaning against the piano, looking about him with a disconsolate but determined air. Vance had moved over to one of the pictures on the side wall of the living-room—Boucher's "La Bergere Endormie" I think it was—and stood looking at it with cynical contempt.

"Dimpled nudities, gamboling cupids and Woolly clouds for royal cocottes," he commented. His distaste for all the painting of the French decadence under Louis XV. was profound. "One wonders what pictures courtesans hung in their boudoirs before the invention of these amorous ecloques and beribboned sheep."

"I'm more interested at present in what took place in this particular boudoir last night," retorted Markham impatiently.

"There's not much doubt about that, sir," said Heath encouragingly. "And I've an idea that when Dubois checks up those fingerprints with our files, we'll about know who did it."

He drew aside the gold-gauze curttains. "Look at that iron grating."

Vance turned toward him with a rueful smile.

"You're so trusting, Sergeant. I, in turn, have an idea that, long before this touchin' case is clarified, you'll wish the irascible Captain with the insect powder had never found those finger-prints."

He made a playful gesture of emphasis. "Permit me to whisper into your ear that the person who left his sign-manuals on yonder rosewood table and cut glass door-knob had nothing whatever to do with the precipitate demise of the fair Mademoiselle Odell."

"What is it you suspect?" demanded Markham sharply.

"Not a thing, old dear," blandly declared Vance. "I'm wandering about in a mental murk as empty of signposts as interplanetary space. The jaws of darkness do devour me up; I'm in the dead vast and middle of the night. My mental darkness is Egyptian, Stygian, Cimmerian."

Markham's jaw tightened in exasperation; he was familiar with this evasive loquacity of Vance's. Dismissing the subject, he addressed himself to Heath.

"Have you done any questioning of the people in the house here?"

"I talked to Odell's maid and to the janitor and the switchboard operators, but I didn't go much into details—I was waiting for you. I'll say this, though: what they did tell me made my head swim. If they don't back down on some of their statements, we're up against it."

"Let's have them in now, then," suggested Markham, "the maid first." He sat down on the piano-bench with his back to the key-board.

Heath rose, but instead of going to the door, walked to the oriel window.

"There's one thing I want to call your attention to, sir, before you interview these people, and that's the matter of entrances and exits in this apartment." He drew aside the gold-gauze curtain. "Look at that iron grating. All the windows in this place, including the ones in the bathroom, are equipped with iron bars just like these. It's only eight or ten feet to the ground here, and whoever built this house wasn't taking any chances of burglars getting in through the windows."

He released the curtain, and strode into the foyer.

"Now, there's only one entrance to this apartment, and that's this door here opening off the main hall. There isn't a transom or an air-shaft or a dumb-waiter in the place, and that means that the only way — the *only* way — that anybody can get in or out of this apartment is through this door.

"Just keep that fact in your mind, sir, while you're listening to the stories of these people. . . . Now, I'll have the maid brought in."

In response to Heath's order a detective led in a mulatto woman about thirty years old. She was neatly dressed and gave one the impression of capability. When she spoke it was with a quiet, clear enunciation which attested to a greater degree of education than is ordinarily found in members of her class.

Her name, we learned, was Amy Gibson; and the information elicited by Markham's preliminary questioning consisted of the following facts:

She had arrived at the apartment that morning a few minutes after seven, and, as was her custom, had let herself in with her own key, as her mistress generally slept till late.

Once or twice a week she came early to do sewing and mending for Miss Odell before the latter arose. On this particular morning she had come early to make an alteration in a gown.

As soon as she opened the door she had been confronted by the disorder of the apartment, for the Venetian-glass doors of the foyer were wide open; and almost simultaneously she had noticed the body of her mistress on the davenport.

She had called at once to Jessup, the night telephone operator then on duty, who, after one glance into the living-room, had notified the police. She had then sat down in the public reception-room and waited for the arrival of the officers.

Her testimony had been simple and direct and intelligently stated. If she was nervous or excited, she managed to keep her feelings well under control.

"Now, continued Markham, after a short pause, "let us go back to last night. At what time did you leave Miss Odell?"

"A few minutes before seven, sir," the woman answered, in a colorless, even tone which seemed to be characteristic of her speech.

"Is that your usual hour for leaving?"

"No; I generally go about six. But last night Miss Odell wanted me to help her dress for dinner."

"Don't you always help her dress for dinner?"

"No, sir. But last night she was going with some gentleman to dinner and the theatre, and wanted to look specially nice."

"Ah!" Markham leaned forward. "And who was this gentleman?"

"I don't know, sir—Miss Odell didn't say."

"And you couldn't suggest who it might have been?"

"I couldn't say, sir."

"And when did Miss Odell tell you that she wanted you to come early this morning?"

"When I was leaving last night."

"So she evidently didn't anticipate any danger, or have any fear of her companion."

"It doesn't look that way." The woman paused, as if considering. "No, I know she didn't. She was in good spirits."

Markham turned to Heath.

"Any other questions you want to ask, Sergeant?"

Heath removed an unlighted cigar from his mouth, and bent forward, resting his hands on his knees.

"What jewelry did this Odell woman have on last night?" he demanded gruffily.

The maid's manner became cool and a bit haughty.

"Miss Odell"—she emphasized the "Miss," by way of reproaching him for the disrespect implied in his omission—"wore all her rings, five or six of them, and three bracelets—one of square diamonds and emeralds. She also had on a sunburst of pear-shaped diamonds on a chain round her neck, and she carried a platinum lorgnette set with diamonds and pearls."

"Did she own any other jewelry?"

"A few small pieces, maybe, but I'm not sure."

"And did she keep 'em in a steel jewel-case in the bedroom?"

"Yes—when she wasn't wearing them." There was more than a suggestion of sarcasm in the reply.

"Oh, I thought maybe she kept 'em locked up when she had 'em on." Heath's antagonism had been aroused by the maid's attitude; he could not have failed to note that she had consistently omitted the punctillious "sir" when answering him.

He now stood up and pointed loweringly to the black document-box on the rosewood table.

"Ever see that before?"

The woman nodded indifferently. "Many times."

"Where was it generally kept?"

"In that thing." She indicated the Boule cabinet with a motion of the head.

"What was in the box?"

"How should I know?"

"You don't know—huh?" Heath thrust out his jay, but his bullying attitude had no effect upon the impassive maid.

"I've got no idea," she replied, calmly. "It was always kept locked, and I never saw Miss Odell open it."

The Sergeant walked over to the door of the living-room closet.

"See that key?" he asked angrily.

Again the woman nodded; but this time I detected a look of mild astonishment in her eyes.

"Was that key always kept on the insid of the door?"

"No; it was always on the outside."

Naval Defence of the Empire

Bloemfontein Friend: Great Britain has all along been supplying naval protection not only for her needs, but for those of the self-governing Dominions as well. If she were now to seize the present opportunity to tell the Dominions that in future they must look after themselves in regard to naval protection, and especially the protection of their trade routes, she would be relieving her taxpayers of a heavy burden and forcing the people of the Dominions fairly to shoulder their own burdens. . . . As independent members of the League of Nations, the Dominions claim and exercise the rights of independent states. They could hardly object, therefore, if Great Britain told them quietly but frankly that for the future they must look after their own defences, both on land and on sea. A realization of the potentialities of such a position would be a useful corrective to some of the political and constitutional shipboleths that one hears expressed so airly from party platforms.

Lady Carey Evans, who before her marriage, was, of course, Miss Lloyd George, recently told an amusing story concerning her distinguished father. At a certain public meeting where he was the principal speaker a particularly offensive type of heckler had the impertinence to ask him whether it was not a fact that his grandfather used to drive a donkey cart. Quick as a flash came the reply, addressed, however, not to the questioner, but to his audience generally: "Ladies and gentlemen," he said, "I must ask you to pardon me for not being able on this occasion to give a straight answer to a straight question. The fact is that the cart has quite escaped my memory, but"—here he paused—"I see the donkey is still alive."—Pearson's Weekly.

REMEMBRANCE

Remembrance is an impression which re-echoes from distance to distance in the course of our lives.

Royal Yeast Cakes

STANDARD OF QUALITY FOR OVER 50 YEARS

MAKE BETTER HOME MADE BREAD

Drought

Within hushed cathedral of the trees
A whisper moves upon the heavy air,
As though one heard the all-but-silenced prayer
Of earth, athirst for some God-given ease
To its tormenting; the great argosies
Of laden clouds for ever onward fare,
Full-freighted with the comfort that they bear
Yet may not bring to port. So He decrees.
Plenty will surely come to death's despite;
Yet though green vistas to my view unroll,
I have felt horror in the hopeless night,
For me—the dust of drought it on my soul;
I may not ever quite forget again
His hand withheld the solace of the rain.

—Hasen in the Sydney Bulletin. Victoria.

Record Endurance Flight is Ended

Jackson and O'Brine Land After 420 Hours in Air

CROWD IN FRENZY

Fliers Step from Plane Apparently in Excellent Condition

St. Louis, Mo., —(U.P.)—The longest flight in the history of aviation ended virtually under compulsion here last week when the St. Louis-Robin made a perfect "three-point" landing. Pilots Dale "Red" Jackson and Forrest "Obie" O'Brine, who took off at 7.17 a.m. July 13, had been continuously aloft for 420 hours 20 minutes, or approximately 174 hours longer than any other men in history.

The nearest approach to the Robin's record was that of Loren Mendell and Robert Reinhart who early this month piloted their "Angeleno" 246 hours 43 minutes 32 seconds, a mark extended by the Robin one full week at 2.01 p.m. yesterday.

A dripping wet crowd of more than 20,000 spectators raised a deafening greeting as the Robin finally descended.

Both the crowd and the plane had been trapped for almost an hour before the landing by a sudden rain squal.

As the plane came to a stop, frenzied admirers of the pilots pulled them out and bore them off the field on their shoulders.

Flares were fired and cast an unusual, almost ghastly, glow on the plane. A tractor worked its way resolutely through the hilarious crowd, and dragged the plane to its hangar.

Flashlight pictures of Jackson and O'Brine — both smiling, broadly the confident smiles they wore aloft nearly 18 days ago—were able to surround them and keep them from the crowd.

CLEAN SHAVEN

Both fliers stepped out almost as fresh looking as they did eighteen days ago. They were clean shaven, wore fresh white linen shirts, and both carried straw hats in their hand. Their physical condition appeared excellent.

"Outside of being a little tired, we feel fine," Jackson remarked as policemen guided the two fliers into a waiting automobile and took them to a nearby hangar.

Here they were met by their wives and posed for still and motion pictures. Later they were bundled into the automobile again and driven downtown to an exclusive hotel which turned over its double bridal suite for them to rest in.

Two persons suffered injuries in the crush of the crowd after the landing of the Robin. A movie-tone employe was "knocked out" when bowled off a truck. He was taken to a hospital. A woman was slightly injured when forced back by a policeman.

O. R. Parks, field manager of Lambert-St. Louis field, in an effort to restore complete order, broadcast a reprimand to those members of the crowd who violated the rules, and requested all present "to act like real citizens, get into your cars and go back home."

Considering the 25,000 spectators, however, police said they probably behaved as well in the circumstances as any similar gathering in America.

Cache of Poison Gas is Unearthed

Inhabitants of German Town Alarmed Over Discovery

Berlin—Several persons were poisoned by gas and the inhabitants of the west end suburb of Wilmersdorf were greatly alarmed recently as the result of the discovery of what is said to be an extensive cache of pio- said to be an extensive cache of poison gas.

The discovery was made in the most fashionable district of the suburb.

Workers laying a ground floor of a building found several layers of bottles. They were ignorant of the contents of the bottles and broke a few. Several of the men were poisoned by gas and a police investigation was started.

The police said the cache was the site of a war-time tear fas factory and it was reported that 100,000 small bottles of gas were buried a few yards under the surface when production was abandoned.

The discovery recalled a number of dangerous situations in Germany cused by inability to dispose of war gas. One of the most serious was at Hamburg, where a large quantity of gas escaped and resulted in a number of deaths.

MacDonald and Hoover

Philadelphia Ledger: The spectacle of the Prime Minister of England in conference with the President of the United States at the White House is likely, from a purely sentimental standpoint, to have a better and more lasting effect upon Anglo-American relations than anything that has happened in recent years. In view of the conversations at present proceeding with regard to naval disarmament the Prime Minister's visit will have ts practical effects also.

Australia Drops Labor Policy

Arbitration System to be Left to Individual States Under Government's Plan

Jurisdictions Now Overlap Commonwealth to Maintain Power Over Marine

Canberra, Australia.—After twenty-five years the bottom has fallen out of the vast and intricate structure of the Australian federal arbitration system.

Prime Minister Bruce has announced that legislation will be introduced in the next session of Parliament abandoning federal control of industrial conditions and, with the exception of shipping and waterside industries, surrendering the entire field to the six states.

Laws Overlapped

This decision, so far as Australia is concerned, arises out of a long drawn out struggle between the states and the commonwealth, each claiming the fixing of waes, hours and other conditions overning industry as its own province. Employers, harassed and weary of conflicting an doverlapping authority, have cried for years for unification of industrial laws. Each state has had its own, and the federal government has superimposed yet another set of statutes.

Any body of employees discontented with what it har extracted from its state courts would seek to create what is known as "an interstate dispute," giving it access to the federal court. Having got an award there, the union would proceed to pick the "eyes" out of both the state and federal award and insist by strike or threat of strike—a weapon often resorted to although declared illegal under the arbitration laws—upon enjoying the best out of each award.

Single Control Beaten

By this means wages have progressively risen and hours have fallen, and so tangled has become the web of state and federal laws and awrds tht it hs become imperative for either the states or the commonwealth to retire from the field.

It was argued that, with the commonwealth in control, conditions in an industry would be identical throughout the continent. But the federal government failed to induce the states to adopt this course and was obliged by the constitution to put i o the country by referendum. This was done in 1926.

The workers, however, were apprehensive that the change might be detrimental to them, and by a big majority the proposal was rejected. The situation has since gone from bad to worse, until the Prime Minister has been driven to announce the government decisio to repeal federal industrial legislation .

Valcano Erupts Flames Soar

Halemaumau, Hawaiian Islands.—Activities in the Halemaumau Pit, Kilauea volcano, continued unabated recently.

Lava flowed from two fountains in the Kau side of the pit, overflowing the floor.

A livid glow from the pit lighted the scene late at night. A column of smoke curled skyward to spread into a vast crimson canopy which reflected the glow of the fires in the pit below.

Fountains of flames went roading skyward, shooting molten rock more than 200 feet high.

The activity of the main fountain surpasses the eruption of last February.

There are many large pools of molten lava on the floor of the pit. The entire area is covered with ever-changing fissures through which is visible a fiery sea of lava, which ozes forth to cool off and form black crust on top.

Gets More Eggs By Scaring Hens

Swedish Farmer Increases Egg Production With Shotgun

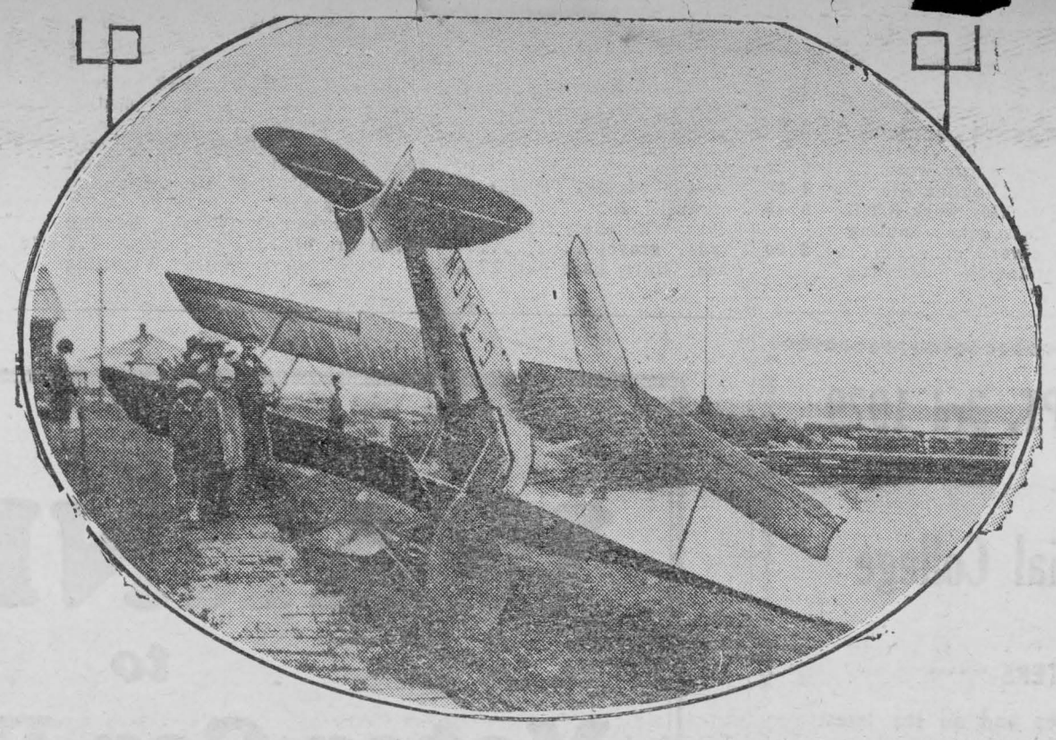
Stockholm—To make his hens lay twice as many eggs as usual, a Swedish farmer has found that nothing accelerates the process more than a couple of good revolver or rifle shots fired close to the henhouse.

He came upon his discovery by a strange incident. A road building company was blasting rocks near his farm, and while the noise was enervating to him, he found that it had another influence on the fowls: as long as the dynamiting went on, his 150 hens laid exactly double the number of eggs as before.

When the excavation was finished, the egg crop immediately decreased to its normal low level, wherefore the obsrvant farmer let his trusty shot gun serve instead, and every morning took a couple of shots at nothing in particular. The hens responded with a record number of eggs.

A woman is terrified of a mouse—unless she has promised to love, honor and obey him.

Plane Disaster



ONTARIO FORESTRY PLANE ASHORE AT LONGLAC

The photograph here shows an Ontario forestry aeroplane blown ashore at Longlac during a gale recently. The plane was lifted eight feet clear of the water and turned upside down.

Strong Lord Lloyd Quits Egypts' Tob

Too Energetic and Driving to Make a Success in the Land of the Pharoes

London—Traditional ideas of fashions in British imperialism have been woefully upset. The young and energetic Lord Lloyd has been virtually forced out of his position as High Commissioner of Egypt for no other cause than a superabundance of those qualities which are usually the distinguishing stamp of British domination.

National states of mind and similar intangibles being responsible for fashions in government, dramatic events must transpire to make the fact real to the ordinary citizen. The resignation of Lord Lloyd sensationalized for the public a subtle alteration in the British attitude toward Egypt. The excitement and astonishment with which London greeted the word of his withdrawal from the Egyptian scene did not alter the fact that the withdrawal was but one event in a general scheme. Excitement was natural.

In the first place, for unfathomable reasons of national psychology, British pulses which remain unmoved by the other part of their world will always react violently to Egypt. Moreover, Lord Lloyd was a striking figure, and his resignation came at a time when King Fuad was a guest in London, and the new Socialist government had to bear the burden of his removal.

As a matter of fact, there is every reason to believe that Lord Lloyd was scarcely in better agreement with his Conservative predecessors than with the Labor Ministry. For dramatic purposes it was just as well his resignation was delayed until the new government came into power. None could escape the contrast between the iron-fisted "colonizing Briton" molded in the ancient tradition and the present unconventional Cabinet, which talks of reducing navies—as though ships were not sacred—and whose members occasionally protest when not allowed to lunch in shirt sleeves.

Distinguished as Soldier

An ancient French proverb says: "One Frenchman: a man of wit; two Frenchmen: a riot. One Englishman: a dull fellow; two Englishmen: a great race." Lord Lloyd is a sterling example of the type which made that race great overseas. Wealthy, young and energetic, he, like many of his contemporaries, chose to forge a career on the anvil of the Far East. Twenty-five years ago he held a minor diplomatic job at Constantinople. During the war he served with bravery and distinction in Egypt, Gallipoli, Palestine and Hedjaz.

When the glamour has receded before cool analysis, historians undoubtedly will find his part in enlisting Arabs with the Allies scarcely less important than that of the sentimentalized "Lawrence of Arabia."

Succeeded Lord Allenby

After the war Lord Lloyd became Governor of Bombay. The famous barrage across the Indus bears witness to his executive skill, and the arrest of Gandhi on his orders was equally a monument to the strong hand in the traditional mold. Five years ago he succeeded Lord Allenby as High Commissioner of Egypt. Trying events beset his tenure. The Egyptian government was at a low ebb of strength, enmity toward Britain was at full flow. Much of the chane for the better has been the result, even as his severest critics agree, of his energetic measures. His tactics were those by which the colonizing Briton has "put half the world aright." It was his misfortune to cling to tradition at a moment when tradition fell awry of the times. His was the way of "energetic statesmanship." It is no longer the fashion to view Egypt from that angle. When the Socialists let it be known that Lord Lloyd's resignation was accepted to clear the way for new policies the phrase they used was "greater independence."

Day Radio Improves With Sun Spots Dim

Washington—A further link in the chain of evidence that links radio static with sun spots has been forged by continued experiments at the Bureau of Standards.

Daylight radio reception is at its maximum now, with static at a minimum, investigation by the laboratory of special radio transmission research reveals. The information covers receiving measurements from 13 distant stations, mostly European, and six American stations within 500 miles of Washington.

The sun undergoes an 11-year cycle of activity ,and observations correlate this period with the growth and decrease of radio statis. A period of intense sun spots occurs at the height of the period, with bright spots appearing on the sun's surface as volumes of flames are shot up hundreds and perhaps thousands of miles from eruptions.

Meanwhile the Bureau of Standards is recording night and day the ratio of static to signals, on devices that look like ticker tape. The bureau has a comparison of reception conditions since 1923.

The Wheel Comes Full Circle

New York Herald-Tribune: Twenty-six banks in Florida have closed their doors since July 5. Much ink has been spilled to attribute this phenomenon of depression to the ravages of the Mediterranean fruit fly. Undoubtedly this pest has been a contributory factor, but the fact remains that the rise and fall of fortune in our peninsular paradise have almost exactly paralleled each other, both in extent and in time consumed. The unprecedented boom which peopled Florida with millionaires achieved its peak a little more than three years ago. It had begun gathering its force three years before that. Today the cycle is complete. The curve of deflation equals that of inflation.

Plane Makes Fast Letter Delivery

Mail from Empress Reaches Chicago Hour Later Than Quebec

Ottawa,—One hour after the last mail bag had been unloaded at Quebec City from the Empress of Scotland, an airplane, bearing letters taken from the ship at Rimouski, dropped into the municipal airport at Chicago, over 1,000 miles away, where the pilot handed bags of postal matter to the United States post office officals on the field.

Six hours before the ship docked at Quebec, mail picked up at Rimouski was being delivered in Toronto, while the Montreal consignment had been delivered about three hours earlier in the day.

This information is contained in a brief report of ocean air mail flights compiled by the post office department. Authorities pointed out that flights of this sort cannot be guaranteed as their success depends on the early arrival of the steamers at Rimouski where the mail is transferred to the planes. The late arrival of a steamer wil make it impossible to complete delivery to Chicago on the same day.

Novel Quake Stirs New Zealanders

Auckland, N.Z.—Much interest has been aroused by the peculiar nature of the earthquake shocks that were felt for a distance of 140 miles on South Island—from Nelson, on Cook Strait, to Greymouth, one of the coal ports on the west coast. The shocks which, while sending hillsides crashing down into valleys and wrecking a number of buildings, did hardly any damage in the main centers of population, were apparently not of volcanic origin.

Seismological experts in New Zealand reported that all the volcanic outlets in the Dominion were normal at the time and there is a strong opinion that the quakes were the result of subsidence of strata along a well recognized geological "fault."

Although considerable damage was done in certain areas requiring the expenditure of much money in restoring buildings and repairing roads, the normal life of the Dominion has not been seriously affected and work is going on as usual.

Mr. MacDonald's Visit

Brooklyn Eagle: If Mr. Ramsay MacDonald wishes to come, the invitation from Mr. Hoover will no doubt be prompt. The country would welcome him. The great majority of his own people, regardless of party, would view the visit with satisfaction. Greater good can be accomplished by a direct interchange of opinions between executives of the two nations than by half a dozen international conferences where delegates act as spokesmen with professional advisers tending to obscure counsel.

A Fine Example of Persistent Effort

Pyjama Clad Figure Fails to Shock New York

Apostle of Cool Dress for Men Accomplishes Mission

New York, — W. O. Saunders, apostle of cool dress for men, went back to his home town of Elizabeth City, N.C., today with his mission in New York accomplished—he had worn his pajamas on a stroll down smart Fifth Avenue, he had shown Broadway how to be comfortable, or less uncomfortable, when thermometers over the sizling sidewalks were near the 100-degree mark.

New York was not shocked, it was amused.

It didn't jeer the new style or its champion, it was for the most part merely curious. Some voiced hearty approval of the natty pyjamas when they learned that Saunders was in earnest, that it was not an advertising stunt or part of a motion picture.

"That's the way to dress," one man commended. And a girl observed that the pongee outfit was "pretty smart," adding it was comfortable."

After he had gone back to his hotel last night to pack, Saunders summed up the results of his sally by saying he had shown that "no man needs to be afraid to wear pyjamas on the street in New York. He thought it was the photographers with him that attracted the crowds, rather than his attire.

"A man wearing a salt and pepper suit and a red necktie would have attracted more attention on Fifth avenue than I did if I had been alone," he said.

He has no illusions that his idea of summer dress will have a sudden vogue. He thinks the only thing to do now is to let the notion "percolate a while."

"There will be no rapid change in men's styles," he said. "Men are terribly conservative. But gradually they will come around to my views. The beauty of pyjamas is that most men are already accustomed to wearing them. Other dress reforms failed because they tried to introduce something entirely new — shorts for instance. But pyjamas need only to be tailored a little better and fixed with a couple of pockets in the pants and they are entirely suitable for street wear.

"The idea of wearing pyjamas on the street sounds outrageous only to men who still wear night shirts," he continued. "Naturally those who don't wear pyjamas at night can't be expected to acept them for day wear."

The "pyjama man"—he is really publisher of a newspaper in Elizabeth City—is confident that many men will gradually adopt the comfortable grab, loafing around home in pyjamas as he did at first, then venturing forth to the corner drug store, and finally wear them on the street even during the day.

The pyjamas which Saunders, a bulky man, wore on the street here yesterday were fashioned of pongee in natural color and at a distance might have been taken for an ordinary summer suit had it not been for the sash around his waist. A green tie was knotted loosely under the turned-down collar, panama hat, brown sport shoes with rolled socks, and a cane completed the ensemble to which the jolly Southerner treated New York.

Prison Escapes

New York World: So long as we bolt and bar the door of hope against opening by any patience in good behaviour, so long as we properly seek the safety of society by imprisoning those who make war upon it but neglect the curative and reformatory possibitities of punishment, there will be no lack of desperate men to take the lead in reckless dashes for freedom. Some of them would remain incurable, confirmed criminals in any case. How many could be set upon the right path and finally ntrusted with their liberation we do not know. It would be well worth knowing.

Paying for Carelessness

Detroit News: (A Connecticut law grades insurance rates for motorists according to their records of safety.) All but "perfect" drivers are classified. Those who have never figured in an acident get basic rates. Those who have been guilty of minor infractions of traffice laws get a slight boost in their insurance costs; those who figure in a number of untoward incidents must pay a rate 25 per cent higher than the "perfects," and habitual offenders and drunken drivers may take a rate 50 per cent higher than the basic charge. How this seemingly reasonable principle works out in practice under state authority is of interest to motordom generally.

Preference and Competition

Vancouver Sun (Lib.): So far as Canada is concerned, British is an industrial competitor and to throw our markets wide open to British would be as unjustifiable as to throw them wide open to the United States. Such a policy would inevitably result in the ruination of many of our industries which constitute so important a factor in national development.

...IAMSBURG COUNCIL

...e Council met in Froats' Hall Williamsburg, on Saturday Aug. 3. Members all present. Minutes of previous meeting read and adopted. The Bailiff was instructed to proceed to collect all unpaid taxes.

The following accounts were passed:

WARNING!

to

Motor Car Drivers

CARRY YOUR LICENSES

THE Highway Traffic Act requires that every person operating a motor vehicle shall secure an operator's or chauffeur license and shall at all times while driving carry same. A penalty is provided for failure to produce such licenses when demanded by an officer.

It is necessary, owing to the number of motorists who persist in driving without licenses, that the police be instructed to require the production of these licenses from time to time.

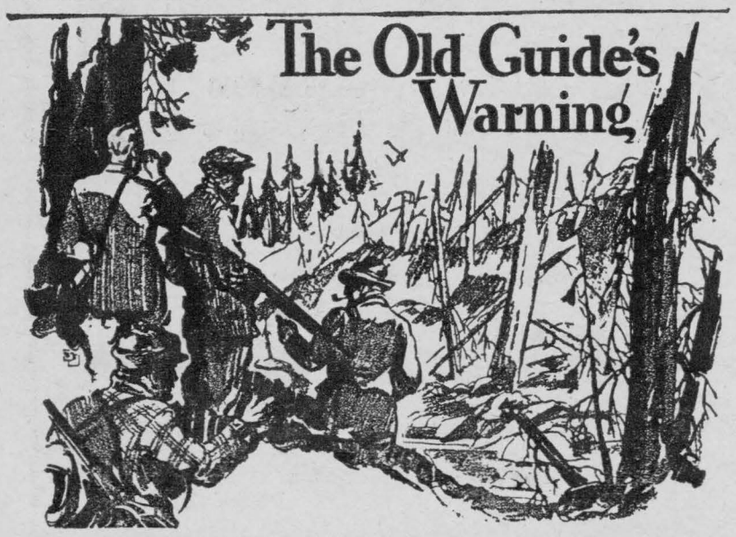
This law has been passed in the interests of safe driving and to prevent incompetent persons from operating motor vehicles. The production of a license is the only proof of ownership of one.

Carry yours at all times and avoid inconvenience and prosecution.

Ontario Department of Highways

The Hon. Geo. S. Henry, *Minister.*

363



The old guide knows that careless hunters cause many forest fires resulting in the destruction of excellent hunting grounds as well as valuable timber. The good hunter is careful with fire in the woods.

HELP SAVE YOUR FORESTS

Issued by authority of
Honourable Charles Stewart,
Minister of the Interior.

You Need Not Spoil Your Evening

Now that reduced evening rates on "long distance" begin at 7 p.m. (local time) it is possible to get one's telephoning done before evening engagements begin!

From 7 to 8.30 p.m. the rate on Station-to-Station calls is about 25 per cent less than the day rate.

Further reductions are in effect from 8.30 p.m. to 4.30 a.m.—about 50 per cent off day rates.

(The minimum reduced evening rate is 35c; and the minimum reduced night rate 25 cents).

This service —particularly the early evening type of message from 7 p.m. — is a real convenience!

MANUFACTURERS WHOLESALERS EXPORTERS

OUR CORRESPONDENTS

WILLIAMSBURG

Mr. and Mrs. Peter McIntosh, Mr. and Mrs. Lynden Shannette and Miss Beatrice McIntosh are taking a motor trip this week down through the States, returning via Buffalo and Niagara Falls.

Mr. and Mrs. Peter M. Barkley and Miss Nancy Garlough spent Sunday in Finch, guests of Mr. and Mrs Simon Whitteker.

Mr. and Mrs. S. S. Lindsay and son Gordon of Brockville visited Mrs. Lindsay's sister, Mrs. M. O. Trickey last week.

Recent guests at the home of Mr. M. O. Trickey were Rev. and Mrs. Claxton and daughter Elaine, of Nicholville, N.Y., Mr. Mack Trickey, Mr. and Mrs. Arnold Avery of Mallorytown, Mr. John Claxton of Watertown, and Mr. and Mrs. T.A Hill, of Ottawa.

Week-end guests at the home of Mrs. A. W. Casselman were Mrs. R. McCleery, Miss Georgina McCleery and Mr. Dan McCleery, Miss Grace Neil motoring up from Montreal, also Mrs. Guy Cunningham of Williamsburg.

Recent guests of the Misses Mae and Sara Merkley: Mrs. Ella Merkley; Mr. and Mrs. Frank Merkley and children; Mr. and Mrs. Lennie Merkley and Mr. and Mrs Harry Merkley and daughter Miss Ruth of Ottawa and Mr. Bert Myers of Detroit, Mich.

Rev. L.M. McCreary of Ottawa was renewing old acquaintanceship in our village last week, enroute to Dunbar, where he was accompanied by Misses Evelyn and Frances Merkley of Toronto, to spend a couple of days with their grand-parents, Mr. and Mrs. Geo. Merkley.

Miss Catharine Shannette of Windsor is spending a few weeks holidays with her sister, Miss Lucy Shannette and brother, Mr. Roland Shannette.

Mr. Cecil Hanson of Ottawa spent last week-end with his parents, Mr. and Mrs. Jno. Hanson.

Recent guests at Sunny Brook: Mrs. Alice Strader and Miss Dorothy Strader and Miss Iva Whitteker of Ottawa, Mr. and Mrs. Haldane Durrant and Mrs. M. Ford of Chesterville and Mr. and Mrs. Percy Hummel and baby and Kenneth Fraser of Ottawa, Mrs. Arlie Mizener and Miss Alice of Farnham, Que., and Mr. Donald Miller of Knowlton, Que., Mr. and Mrs. J.W McIntosh and family of Ottawa, and Miss Evelyn Boyd of Chesterville.

Mr. and Mrs. Dixon and family are spending a month's holidays at Point Iroquois.

Sympathy is extended to Mr. Dixon in the recent death of his father.

Rev. E. Smith of Carleton Place and Miss Muriel Smith of Toronto spent last week-end at the home of Mr. D. Short, enroute to New York City, N.Y. They were accompanied by Miss Gladys Whitteker. On Tuesday they returned, accompanied by Mr. Gordon Smith, and on Tuesday evening the young people and friends of Miss Whitteker gathered in Froats Hall, the occasion being in honor of the marriage of Miss Whitteker to Mr. Gordon Smith. The evening was spent in dancing and music, after which refreshments were served and the bride-to-be was presented with a purse. After a pleasant evening the gathering dispersed, after wishing the young couple 'bon voyage'.

Miss Iva Whitteker of Ottawa spent last week-end with her parents, Mr. and Mrs. Edwin Whitteker.

Mr. Claude Merkley and Mr. Wright of Toronto arrived in town on Sunday evening last. On Monday accompanied by Mrs. Merkley and children, who have spent the past month with her parents, Mr. and Mrs. J. D. Beckstead, they returned to their home in Toronto.

Mr. and Mrs. Ralph McIntosh and son of Toronto returned home this week after spending the last couple of weeks with friends here.

We regret to report Mrs. Ward Casselman suffering from an attack of blood poinsoning, and hope she will soon recover.

Dr. Archie Shannette is spending a few weeks practising with Dr. Locke.

NUDELL BUSH

Mr. and Mrs. Arthur Henry entertained their niece and nephew, Mr. and Mrs. A.W. Deeks of Detroit Mich., last week.

Mr. Wilfred Henophy of Massena spent Sunday with Mr. and Mrs. Alvin Henophy.

Mr. Harry McIntosh spent the week-end with his parents, Mr. and Mrs. Melvin McIntosh.

Miss Beatrice Hart of Cornwall spent the week-end at her home.

Mrs. Arthur Henry and Mr Lloyd Henry spent Tuesday in Morrisburg

Mr. Alvin Henophy was in Aultsville on Tuesday.

Miss Dorothy Gallinger and Mr. Graham Gallinger spent Monday evening with Mr. and Mrs. Droppo.

Mr. and Mrs. Fred McIntosh were in Aultsville Tuesday evening.

Mr. Revery passed through here on Monday enroute to Morrisburg.

Miss Helen Markell has returned home after spending a few days with friends at Syracuse, N.Y.

Mrs. Cory Hollister was in Aultsville Tuesday evening.

Mr. N. Epaugh spent Saturday in Cornwall.

Mrs. George O'Shaughnessy of Hoasic called at her home on Wednesday.

Mr. and Mrs. Geo. Casselman called on Mr. and Mrs. Alvin Henophy Thursday evening.

Mrs. Cory Hollister called on Mrs Aubin Thursday.

Mrs. Wilda Roland of New York is spending some time with her mother, Mrs. Wm. Henophy.

Mr. Denney of Cornwall, Mr. F. Merkley of Chesterville, Mr. L. Froats of Froatburn called at Mr. Henry's on Saturday.

Mr. and Mrs. Wm. Baker spent Friday in Morrisburg.

An airplane travelling from Montreal to Gananoque on Saturday caused great excitement in Nudell Bush when it landed in Mr. Arthur J. Henry's field near his barn.

ARCHER

Miss Dorothy Gallinger, who has been spending a three weeks' holiday with her parents, Mr. and Mrs H.A. Gallinger, returned to the Ontario Hospital, Brockville.

Mrs. R. Donnley of Aultsville is Miss Greta returned home after sp days with her sister, Mrs ucks, Cardinal.

Mr. Ralph Cunningham, of Ogdensburg, spent a few days recently with his parents, Mr. and Mrs. Roy Cunningham.

Mrs. J. Heagle and Miss Belle spent Tuesday the guests of Mr. and Mrs. Arthur Heagle, Gallingertown.

Mr. Chas. Ault and Mr J. Heagle spent Tuesday at Metcalfe.

Mrs. Roy Cunningham is on the sick list.

Mr. Bert Cunningham of Lancaster is spending his holidays with his parents, Mr. and Mrs. R. Cunningham.

Mrs. H. Gallinger of Finch is spending a few days with her daugh ter, Mrs. Roy Cunningham.

MARIATOWN

Mr. and Mrs. Frank Powell and children of St. Catharines were visiting friends and relatives in this vicinity last week.

Mrs. Ottawa Weaver of Toronto and son Jack, and Lena May, are spending a couple of weeks with Mr. and Mrs. Ernest Castleman.

Mrs. Alice Hanes is spending this week with Mrs. Stanley Casselman.

Master Sheridan Casselman is spending a few weeks with his uncle, Mr. John Hanes.

A birthday party was held at the home of Mrs. Stanley Casselman in honor of Mrs. Hector McLean and also of Mrs. Frank Powell. All enjoyed a good time.

THE IMPORTANT THING

The examination of your eyes is the most important act performed for you by your Optometrist. Testing your eyes requires skill. Time is the capital of the Optometrist. He cannot do the most important work free of charge.

Glasses are not ordinary merchandise. Their value as an aid depends wholly on the knowledge and skill of the one who examines and tests your eyes.

The fact that glasses cannot be bought over the counter like merchandise should help the public to decide that illustrations and prices in advertising are in the nature of bait. It is the curve of the glass and not the price which will give you perfect vision.

A free examination is a bait. In judging such advertising, the public should remember that such advertising is unethical in the first place, and therefore little reliance should be placed on it.

J. MILES WHITTEKER
Optometrist
MORRISBURG Phone 18

IN MEMORIAM

In loving memory of Mrs. Gertrude Dawley, who passed away on July 26th, 1928.
It's lonesome since you left us,
Our hearts are still filled with sorrow;
As we think of you most dear
We wish you were here with us,
As a vacant place is here.
Inserted by Father, Mother and Family.

SCHOOL AT CORNWALL

Sanction of the establishment of a Commercial School at Cornwall Collegiate Institute, under the Vocational Education Act, to supplant the present commercial department, has been given by the Ontario Department of Education. The new commercial school will open with the Fall term in September.

Following a decision by members of the Cornwall Collegiate Institute board, the matter was taken up with the Department and necessary consent secured. For a Commercial School, the Department requires a minimum enrolment of 75 and a full three-year course of study. These requirements have already been met. The growth of the commercial department at the Cornwall school has been so rapid that the attendance has been doubled in the past three years.

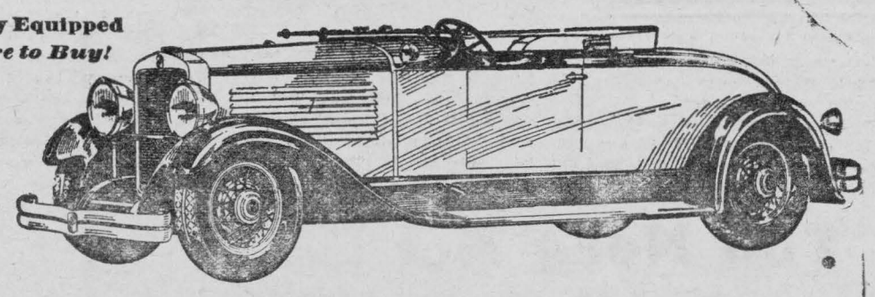
NASH "400"
LEADS THE WORLD IN MOTOR CAR VALUE

"400" Special Six Roadster
$1324
Delivered, Fully Equipped
Nothing More to Buy!



IN STYLE, PERFORMANCE AND PRICE
—the pick of the roadsters!

FOR the open car enthusiast, Nash builds a roadster that makes all others second choice.

This new Nash "400" has the style, the finish and the sparkling performance that you customarily expect only from roadsters far beyond its extremely moderate price.

The motor is the new Twin-Ignition type which Nash engineering has developed to add exhilaration and economy to motoring. Twin-Ignition means *more power, more speed* with *less gasoline.*

Next year's open car fashion is forecast in the finish of this charming "400." The upholstery is pigskin, with a big disappearing arm rest in the center of the front seat and arm rests on either door. The "400" roadster seats its passengers low, with only head and shoulders visible. Wheels are ire, with big heavy duty spokes, oversize hubs and chromium-nickeled r .

And the "400" Roadster is *fully equipped,* at the price quoted above, with every fine car accessory, including Lovejoy hydraulic shock absorbers, Bijur Centralized Chassis Lubrication, chromium nickeled bumpers, spare tire, tire lock and tire cover.

It's new, it's smart and it is lower priced than any other roadster which remotely compares in style, quality and performance. See it before you buy your Roadster.

Delivered, Fully Equipped Price Range of 23 Nash "400" models includes Touring, Roadster, Coupe, Cabriolet, Victoria and Sedan Models

MORRISBURG MOTORS LIMITED

Tourist Camps And Public Health

U.S. Health Service Issue Bulletins Which is of Interest to All Ontario Towns

In planning long or short trips by automobile the ardent touring fan often seeks the out-of-the way roads in order to discover for himself the more beautiful spots of nature,, and, more practically, to avoid the beaten highways, which nowadays usually carry a very heavy traffic. This is particularly true if the person is planning to camp out. In preparation for an automobile trip, the U.S. Public Health states that careful forethought is usually given to the necessary spare parts for the machine, the kind of clothing to take along, or the camping equipment needed, but often too little thought is given to one's health and the safeguarding of it on the trip.

This latter point cannot be too strongly emphasized. because, on such a trip, living conditions are often changed so much by evposure to inclement weather, lack of sleep, irregular hours, and other factors, that the bodily machine may, perhaps, become more susceptible to attack from disease than it would under the normal home conditions.

The safeguarding of the health of automobile tourists, both on the roads and in the camps, has become an important public health problem. As early as 1925 it was estimated that in thirty-five States there were more than 3,000 camps attended by over 2,000,000 campers. In 1928, it was estimated that, in California alone, there were 1,400 automobile camps. In other States, particularly those with well advertised scenic areas, there were probably several thousand others. Investment in camps of all kinds in the State of Maine has been estimated to exceed $5,000,000. Much has been done within recent years to improve tourist camps, but there is yet much more to do. For example, in one State in 1926 ,there were 233 camps inspected and only 104 of these could be approved.

The problem is not a simple one but involves three important factors; First, an intelligent understanding of the situation by the people; second. the co-operation of State and local authorities, and the support of official and voluntary organizations; and, third, and most important, the fixing of the responsibility for the maintenance of sanitary conditios.

In many States the resposibility for the sanitation of tourist camps has been delegated to State health officers by law, and in others, those agencies have undertaken it without express authority. In a few States where the State agency is doing the work, part or all of the authority has been transferred to district or local agencies or groups. Unfortunately, there are a few sections in which the responsibility for the work has not been positively assumed by any particular department or group. However, these sections are in the minority, because within the last few years much careful thought and dilligent effort has been given by health authorities as a whole to making living conditions for campers as nearly suitable for them as possible.

Such State agencies as have started tourist camp sanitation work have usully set up regultions governing the proper construction and maintenance of this kind of camp. The three principal items in any set of regulations might be given as follows: (1) Proper camp location; J2) Safe and adequate water supply; and (3) Safe and efficient waste disposal.

What is the effect of loction on a tourist camp-ground? This question might be sub-divided as follows: (1) Is the site of ample size? (2) Is it provided with a reasonable amount of shade and natural shelter? (3) Will the soil readily absorb and remove water? (4) Is the site accessible to the tourist? (5) Are utilities available from the city, and, if not, are conditions such as to permit the installation of the necessary facilities? (6) Is the site susceptible of surdivision into units? If these questions can all be answered in the affirmative in the selection of a particular site, that site should be an acceptable one.

Ways and Means

Edinburgh Weekly Scotsman (Cons.): If the Government manages to manoeuvre its way with safety among the rocks of controversial measures it can hardly escape the quicksands of finance, which, form all appearances, it is disposed to ignore. Schemes for the reduction of unemployment and the encouragement of industry will have general support if founded on a sound financial basis, but it augurs rather badly for the success of such schemes that the Prime Minister has already committed himself, to the declaration that safeguarding must be regarded as a dead letter. What other method can be devised for the encouragement of the depressed industries, to which less objection can be taken, remains to be seen. The revenue of the country depends on flourishing industry, and although the Government proposes to inquire into the means of restoring the mining, iron and steel, and cotton industries, this prejudice against a tried and effective method is not hopeful.

Science Reveals Age Old Facts

Rare Relics of Ice Age in Austria Come to Light Through Man's Hobby

Vienna—Evidences of prehistoris life of man and animal in the Ice Abe are more or less abundant, in western Europe, especially in France, but in central and southern Europe they are extremely rare. The important results of excavations which have been carried on in the Teufelslucke Caves, near Eggenburg, in lower Austria, therefore, are all the more valuable.

Mainly through a local resident, Josef Krahuletz, who was an archaeologist by hobby rather than by training, for more than half a century excavations were carried on which led to the discovery of the relics of Ice Age known to present-day natural science—great elks, mammoths, wild horses, cave bears, cave hyenas, rhinoceroses with woolly hair, reindeer, etc.

Further, small flint tools and knives were unearthed, not bigger than safety-razor blades but of such stone as has indicated to geologists that either the primitive man who used them came himself from some far distant place where such flints are to be found or had connections with that district. Small heaps of charcoal excavated were recently examined microscopically by an expert, who has declared them to be the remains of coal which had been formed from the conifers, now found in only the highest alpine regions. Thus clear proof was supplied of the extremity of the climate 16,000 to 18,000 years ago.

Excavations are being carried on by Prof. Josef Byer, a leading Austrian authority on prehistoric man, who hopes to discover the remains of human beings from the Solutre period—contemporaries of those whose bones were excavated at Solutre in France—in addition to other evidence of first importance to a scientific knowledge of the ice period. The excavations hitherto made in this cave, which seems undoubtedly to have served as a hunting station for prehistoric man, are all carefully preserved in the Krahuletz Museum at Eggenburg.

Nordic Exhibition Is Held at Kiel

Hamburg—A most unusual exhibition and athletic meet of the Nordic countries has just taken place at Kiel, Ger., well expressing the present friendliness and community of interests of these northern countries. Artists, museums and collectors vied with one another in sending their choicest treasures, and leading men of letters and of sport arrived to represent their countries.

There were textiles, wood carvings and wrought iron work from Sweden and Lapland, fascinating old cupboards, chairs and carpets from Norway, fifteenth century and modern ceramics, textile and carvings from Finland, costumes, house utensils and pottery from Denmark. The Iceland exhibit was small, but showed interesting wood carvings and intricate silver filigree work.

Northern architeotural tendencies of yesterday and today were illustrated in photographs, plans and models and modern painting, sculpture and arts and crafts in well-rounded displays.

Lectures were given by leading experts in art and general science, the premiers of "Paul and Virginia," by Sophus Michaelis, was staged at the opera and such operas and plays as "St. Matthew's Passion," Hebbel's "Herod and Marianne" and Strindberg's "To Damascus" were given before enthusiastic audiences.

Speed and Safety

London Daily News and Westminster (Lib.): It is not the motorist only who is concerened in this matter; the pedestrian has his responsibilities, which he has no right to ignore, for the promotion of the general safety; school teachers and mothers have theirs; the police and road authorities theirs also. Despite the continued rise in the percentage of accidents, there is no reason to doubt that the problems of the new speed age can be solved by common effort and a general recognition of the necessity of understanding the new conditions and acting appropriately. Even the animals are learning the lesson. The "road sense" of dogs has undoubtedly improved; even birds and the wilder creatures of the country-side are less commonly killed than they used to be, despite the vast increase in traffic. It is not credible that man alone should be unable, or unwilling, to learn by the use of his reason what instinct has so rapidly taught these.

Outward Bound

As one on distant travel bent
Looks seaward from the shore
Of this familiar Continent,
Soon to be known no more.

So o'er the boundless deep I gaze,
Fearless, and yet alone,
Powerless to pierce the shining haze
That veils the vast unknown.
—George Douglas in the Glasgow Herald.

ARE SWUNG OPEN FOR FIRST TIME IN 50 YEARS

Swiss Guards swinging wide the huge bronzed doors of the Vatican the first time in over half a century they have been opened.

Cloudless Weather

London—The 13th cloudless day throughout all England sees the drought threat intensified, and the newspapers are publishing photographs of empty reservoirs in Northern England where the threat is worst.

Manchester has only 28 days' supply of water left, while Batley, centre of the woollen trade, has only 17. In many northern towns the water is being cut off for 12 hours at night, which has reulted already in a thousand men being thrown out of work.

Another effect of the drought is the enhancement of food prices which, with reports of the Canadian crop shortage and an increase in wheat prices, makes alarming reading for householders.

Canned Foods

London Times (Ind.): The British people insist on having a large supply of tinned foods. It is extremely foolish, therefore, to continue to buy manufacturers are capable of producing them themselves and have an overwhelming abundance of the necessary raw material ready to their hands. The sane economic policy is in fact so obvious that there must be some reason, good or bad, why it has not long ago been extensively adopted. The only real reason—and it is not a good one—is that in the minds of many people there is an old-established prejudice, to some extent fostered in the past by the medical profession, against the consumption of tinned foods, on the ground that they may be productive of some form of ptomaine of microbic poisoning..... As a matter of fact, there is really no risk at all. More recent medical opinion has emphatically and authoritatively declared, after exhaustive research, that, whatever may once have been the case, modern methods of canning are so perfect that tinned foods produced by reputable firms are now absolutely above suspicion, and, moreover, that they contain at least as large a proportion of the necessary vitamins as the same food when fresh and unpreserved. The case for tinned foods as wholesome and nutritive articles of diet is, in fact, definitely established.

George: "Why don't you advertise?" Town Storekeeper: "No, siree, I did once and it pretty near ruined me." George: "How's that?" Town Storekeeper: "Why, people came in and bought dern near all the stock I had."

Coins of Herod Come to Light

Three Tombs Found in Palestine Shed Light on Biblical History

Jerusalem—Discovery of three tombs belonging to three distinct periods of Palestine's history has been announced by Dr. William F. Bade, director of the Pacific School of Religion, Berkeley, Calif., excavating at Tell en-Naebeh, which Dr. Bade believes is the safe of the ancient Mizpah.

The discovery was made just as the excavators were preparing to end their work of the season The first tomb contained an assortment of pottery, beads and jewelry from the second phase of the Iron Age in Palestine, and may be dated from about 600 B. C.

There was evidence that earlier occupants had been removed during the Hellenistic period, because praccically all the furniture was left intact.

Of special interest to Biblical students is the second tomb, because of a coin found in it dated in the reign of Archelaus, cruel son of Herod the Great who ruled from 4 B. C. to 6 A.D. During his reign, according to Matthew, the parents of Jesus, upon their return from Egypt to Nazareth, avoided Judea in order to escape persecution. Other objects in the tomb were equally interesting, belonging in point of time to the boyhood of Jesus.

An unusual assortment of pottery from the early Iron Age (1200 to 800 B. C.) was found in the third tomb. There were more than 50 intact saucer lamps and an equal number of broken ones. Scores of small black jars with loop handles, presumably for oil, and about 30 beautifully burnished bowls, including a unique jug in the form of a beehive were discovered.

Dr. Bade believes this is the largest tomb group ever unearthed in Tell en-Naebeh, and hopes a more definite date of its construction may be discovered after careful study of two fine Egyptian scarabs found there.—Christian Science Monitor.

First Proud Mother—"My Leslie has done awfully well again at running and jumping. He's just won his seventh cup." Second Proud Mother—How strange you should mention sport, Mrs. Dubbin. I've just heard from an unofficial source that my boy Launcelot, who is a bit of an athlete, has won a cup and saucer, too, at 'Houpla,' whatever that may be."

Plan Held Result Of Years of Work

Vienna—Count Richard Coudenhove-Kalergi, founder of the Pan-European movement, and advocate of a United States of Europe, discussing in the press M. Briand's proposal to summon the first Pan-European government conference this year, says that many reports to the contrary notwithstanding, M. Briand's decision is not improvished, but is the outcome of his deliberate policy, upon which he has been working consistently through the meetings at Cannes and Locarno and through the Kellogg pact.

Only non-settlement of outstanding problems from the war caused M. Briand to postpone the summoning of the conference after the Pan-American conference last fall. M. Briand discussed the Pan-Europe proposal with the statesmen of the last League of Nations Council meeting in Madrid and found no opposition.

Count Coudenhove-Kalergi considers the present time favorable for M. Briand's action. Now, he says, a decision must be made between the old policy of balance of power, which led to the war, and a new policy of economic and political co-operation within the framework of the European cultural unity. "The fifteenth anniversary of the outbreak of the last war will soon come," says the Count, "when the question of war guilt will again arise; but a more important question is the responsibility in any future war. All opponents of the United States of Europe must share that guilt. In democratic states people have henceforth no right to blame the government alone for the decisions taken."

Naval Parity

London Observer (Ind.): Two things must follow from the definition of equality. The first will be a swift and drastic reduction of armaments, inevitable when cautious admiralties need no longer provide for J. R. Watkins,
a large margin of safety to cover uncertainties. The second, equally inevitable, but even more significant, will be a disarmament of men's minds. With equality, established in measurable terms, there must needs vansh al suggestions of rivalry, all elements of covert competition, between Britain and America on the oceans. This is the very substance of the peace which we have all dreamed of since 1914.

She (leaving show): That play was absolutely all talk.

He: Well, it's entitled "The Woman," you know.

Imperial Preference

Victoria Times (Lib.): When Mr. Bennett preaches Empire trade as if it was something new that only he had thought about—instead of a fixed Liberal policy which was based on the British Preference as far back as 1897—it should be remembered that the party of which he is the leader fought the Imperial Preference, the Canadian-Australian treaty and Canadian-British West Indies Treaty —ll designed to foster trade between these parts of the Empire.

"When'll ye be getting marrit, Donald?" "Och, I dinna ken. Sarah has some printed stationery she must use up first, and she disna write much on account of the postage."

Canne... Fruit Areas, Aim of Norwegian Women

Large Number of Small Plants Proposed by Farm .. Association

Oslow, Norway.—Small canneries, to be built in all districts where fruit is grown, are planned by the Peasant Women's Association of Norway. The cost of each cannery would be no more than 5000 or 6000 crowns and it is proposed to adapt them to all sorts of fruits and berries. These proposals follow the success of the great cannery which has already been built at Toten and which, however, only handles surplus apples.

The aim of the farm women of Norway is to stand side by side with the farmers' associations in their effort to raise the peasantry economictly and culturally.

One of the great purposes of the association under the leadership of Mrs. Olga Bjoner, is to secure a better school system and to get better representation of women on the school boards. It also seeks to make education more suited to present-day requirements and to st strengthen the religious teaching in schools.

Their aim is also to elevate family life, to enlighten the people as to the evils of alcohol and to work for a better understanding between neighboring districts and between classes. As far as possible, libraries will be organized.

The association has taken up the development of all kinds of home industry, and in order to support these industries it tries to make people use home products. Spinning, dyeing, weaving are encouraged. It also aims at exporting different products of the home industry.

In order to promote the sale of different home products the association has formed sales offices in different districts.

Florence, Italy, Rocked By 'Quake

Florence, Italy. — Florence was shaken by an earthquake. The shock lasted about eight seconds and did considerable damage to wall and roofs in neighboring villages.

Roofs fell and crevices appeared in walls in Borgo, San Lorenzo, Vicchio, Barberino, and Firenzuola, but no personal injuries have been reported.

The quake which was of undulatory character caused many to desert their houses and spend the night outdoors. Its epicentre was believed to be about 25 miles distant.

The Piazza Michelancelino and Le Cascine were full of fearful people, while the population of the hamlet Mugelo went out into the fields to sleep.

At Bologna the shock was lighter than at Florence. At Defenza the inhabitants were greatly alarmed.

BELGRADE SHAKEN.

Belgrade.—A severe earthquake was felt here. The epicentre was estimated to be about 60 miles away in the Rudnik district.

POPULACE IN PANIC.

Buenos Aires.—The populace of four towns are recovering from panic caused by two earthquakes which rocked their homes. The 'owns were those of San Rafael, "Tweny-Fifth of May" (a town named for Argentina's independence day), Monte Coman and Colonia Alvear. There was little damage and no casualties.

American Nationality

New Statesman (London): From the standpoint of Europe, the greatest of republics is a stupendous uniform mass. Its people are believed to have been welded into a mighty sameness; to have become a single standardized community, feeling, saying and doing the same things under the pressure of a common continental system. To the American himself, especially if he belongs to the older Anglo-Saxon stock, this European notion of the United States is an absurdity. So far from the American people being unified, they are to him a congeries of alien and dangerous communities. They continue to speak the languages of Europe. They are not within sight of the goal of assimilation.

Labor and the League

H. Wilson Harris in the Nation and Athenaeum (London): There would seem to be grounds for the belief that the League will find a new stimulus given to its various organs of international activity as the result of the decision the electors of Great Britain have taken. Conservative Ministers have often been eloquent on the danger of going too fast at Geneva. We are unquestionably in now for whatever danger some slight acceleration of pace may involve, and the country will face the peril with equanimity. As for Mr. Henderson, he has been conspicuous hitherto for soundness of judgment and solid common sense, and it is a little hard to visualize him in the part of impetuous revolutionary at Geneva or anywhere else.

Is a man who wears last year's hat, drives this year's car, and lives on next year's income, Progressive, Conservative or Liberal?

Figure It Out For Yourself!

THINGS START MOVING BUT WHAT'S IT ALL ABOUT?

Cameraman records a fast moment in a recent New York ball game between Brooklyn and St. Louis.

Gevaert

(Call it Gay-vert)

The SPEED FILM

"Gets" Them Every Time

Rain or Shine

How often it happens — a picture you are particularly anxious to "get" turns out badly because the sun wasn't shining. Don't let this happen to you. Remember ninety per cent of picture failures is due to under-exposure — and *Gevaert film is faster.*

The safest, most economical and satisfactory way is to keep your camera loaded with Gevaert film. Made to work faster than ordinary film, Gevaerts catch the swiftest movement. Clear, sparkling negatives. No wasted time or material. Better pictures—sun or no sun.

Don't fail to try Gevaert film. Say "Gevaert" to your dealer. In rolls or film packs to fit all cameras.

— The —
GEVAERT COMPANY OF AMERICA
Toronto

4W

The Channel Tunnel

London Daily Mail (Ind. Cons.). The fact that the construction of a tunnel should supply a great deal of work of a useful kind for the unemployed ought to recommend the enterprise strongly to the Socialist Government, and Mr. J. H. Thomas has publicly approved the project. It is calculated that quite 24,000 men would be directly engaged; and in addition there would be a large amount of indirect employment in the manufacture of the steel and the boring appliances required. The stimulus given to British industry—for we assume that British labor and British material would be exclusively specified for the British section of the work—would therefore be of great value in a period of trade depression such as the present ,the old objections to the undertaking need not be treated too seriously in our day. In a few years everybody will be wondering that there ever was any opposition to it.

Reparations and Debts

London Evening Standard (Ind. Cons.): The question of reparations cannot be dissociated from that of inter-Allied indebtedness, and in this latter Great Britain has gone as far as lenient generosity can go. France is paying us eight millions a year, on both capital and interest accounts combined, against an outstanding debt of $650,000,000—which settlement has not yet even been ratified. Italy, whose debt is not much less, is paying us only four and a half millions a year. Meanwhile we are paying to America a colossal sum annually in respect of moneys which we borrowed from her to lend to France and Italy. Mr. Churchill's last statement on the subject was that we had paid since the war £247,000,000 to our creditors, while receiving only £34,000,000 from our debtors.

SELF-ESTEEM

The higher a man is in grace the lower he will be in his own esteem.

LUXO

FOR THE HAIR

Ask Your Barber—He Knows

Athletics

An already ample bibliography of track and field athetics—sports with their roots set deep in antiquity—has been enriched by the production of these two authoritative works which, while contrasting strongly in their presentation, supplement each other's values to the student of a very wide, as well as intricate subject. By their own experience, the authors are particularly fitted for the task of translating the practical application of empirical knowledge into the written theory of the subject. D. G. A. Lowe, president of Cambridge University Athletic Club, 1924-25, has twice been the Olympic champion over 800 meters; his fellow-author, A. E. Porritt, Oxford president 1925-26, had a meteoric career as a sprinted of the top class, and Butler, president of the C.U.A.C. 1920-21, is the possessor of one gold, one silver and one bronze Olympic medal.

Lowe and Porritt, aided by C. T. Van Geyzel, the renowned Cambridge high-jumper, and M. C. Nokes, of Oxford, Britain's best "strong man" for many years, have teamed up to produce the most comprehensive survey of foot racing and its concomitants since Sir Montague Shearman wrote his classic on the subject in 1887. They start as near the commencement of human activities as research can carry them; they revive the earliest extant records, appertaining to the Tailtean Games founded in Ireland about 3000 B.C. by Luguid of the Strong Arm; they pass through the history of the Olympic Games of Ancient Greece to their latter-day counterpart, touching, as they go, upon the development of the sport in Britain, in the United States, the British Dominions, Europe, Asia, and South America. The reader is led gently, to a scholarly exposition of how it should all be done, or perhaps one should rather write, how the best people do it, since the authors have striven, successfully, from start to finish, to instruct without dogmatism.

Butler's book is not, by comparison, such leisurely reading. He plunges without preamble into a discourse on track technique and organization, illuminated by a profusion of photographs, many from the "slow-motion" camera. These strips repay careful analysis. The work is written by one with personal experience of the trials of a games master at a big British public school, and its value would seem greatest to those charged with the instruction of boy athletes. His chapter on the organization of school athletics excels anything the reviewer has previously read on this subject .

When the authors come to their pet specialties they have much of interest to say, as, for example, when Lowe propounds his theory of the "constant factor" in half-mile running. Broadly and briefly put, his argument is that however slowly, within reason, the first quarter-mile may have been run, the time for the second is practically a constant factor for each runner, and that, therefore, the time for the first quarter is all-important. In other words, if 57 seconds is appoximately a runner's "constant" for the second quarter-mile, after a 55s. first quarter, no advantage will accrue if the pace falls below 55s. in the opening "440." On the other hand, he points out, the pace in the first lap may be so hot as to be economically unsound, in which case the 57s. taken as the "constant" for an exceptional athlete would increase perhaps to 59s. or 60s.

It is a tribute to these two books that one can read them both without a wearying sense of repetition. The ground they cover is, for a good deal of the time, common to both; but the avenues of apprach are widely different, and whilst a comfortable armchair is desirable for the complete enjoyment of "Athletics," Butler's book calls for close attention to diagram—and a notebook and pencil.

CONSIDER THE END

Better it is, toward the right conduct of life, to consider what will be the end of a thing than what is the beginning of it; for what promises fair at first may prove ill, and what seems at first a disadvantage may bring the greatest and truest gain. —Leighton.

"How's your wife coming along with her driving?" "She took a turn for the worse last week, sir."—Life.

Granada–a Mountain City

Granada is held to be one of the lovliest places in the whole world. The city lies at the point where the Sierra Nevada puts forth its foothills, a bundle of rays extending toward the Vega like gigantic roots that have come up out of the ground. The new section of the city has spread placidly over the plain with its spacious horizontal streets and lines of elms (alamedas), or is wedged in between the hills, following the valleys and riverbeds, and terminating in thin lines extending far into the Sierra. The older part of the city has not been able to make itself so comfortable. These ancient quarters still bear marks of having been built in insecure times, when the houses clung for protection to the steep mountain ridges. There they still stand, a densely packed mass, like a flock of frightened mountain goats. So have they stood for many peaceful centuries, still spying out the enemy in a sort of petrified panic.

Steep staircase streets lead through the city, with traces of Moorish times meeting your eyes everywhere. Here a great vaulted cistern covered with glazed tiling; there the ruins of a little mosque or an arched gate built to break the force of a hostile onslaught. In the city walls are fragments of stucco arches resting upon marble columns, and now and again your eye wanders into a still perfect Moorish courtyard.

In some places the slope becomes too sharp to be negotiated by staircases and the path is then obliged to assume a long zigzag rise. It has been impossible to build houses except on the inside of the zigzag, where they must use the mountain for a back. The outer edge of the path is a white railing and a file of slender cypresses topped by an ocean of blue. As you mount the path into an endless labyrinth of cabins and weather-beaten walls, fig trees peer forth from the ruins. . . .

We creep under the broad Moorish wall, cross a sun-dried, parched mountain top and are again on the southern slope of the range. The steep declivity is covered with Indian fig-cactus, which grips the cliffs with its broad, flat roots. Below us, the paths meander down like ribbons along the mountain-slope, and over them irregular rows of smoking chimneys seem to stick at right angles to the red mountain soil. We can see the entrances to the caves from here. . . . At certain points the steep, rocky wall changes to terraces fhere peach-trees and almonds blossom; at other points the walls are pitted by soft shots, sites of caves that have collopsed.—Martin Anderson Nexo, in "Days in the Sun."

SAVE THE CHILDREN

In Summer When Childhood Ailments Are Most Dangerous.

Mothers who keep a box of Baby's Own Tablets in the house may feel that the lives of their little ones are reasonably safe during the hot weather. Stomach troubles, cholera infantum and diarrhoea carry off thousands of little ones every summer, in most cases because the mother does not have a safe medicine at hand to give promptly. Baby's Own Tablets relieve these troubles, or if given occasionally to the well child they will prevent their coming on. The Tablets are guaranteed to be absolutely harmless even to the new-born babe. They are especially good in summer because they regulate the bowels and keep the stomach sweet and pure. They are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

MacDonald and Hoover

J. L. Garvin in the London Observer (Ind.): President Hoover by law is prevented from coming to Europe. The more reason why Mr. Ramsay MacDonald should go to America. Both the President and the Prime Minister know how to lay all the cards on the table. Each of them would find the other amongst the most interesting men that either can ever encounter. Each of them can explain a good deal from different standpoints. It would be a remarkable ad happy episode in the careers of both. The thing wanted is "drastic reduction" of navies, with a human demonstration to the whole world that the two fleets will never be used against each other. It is true. But covert mischief will work right and left until openly we clinch the truth. Let us break down Chinese etifuette by the first visit of a British Prime Minister to Washington. After that, all ordinary decent people in our two countries would go about their business feeling better.

CAN'TS

Have no "can'ts" in your mind. I can't is a fatal thought. Have only ideas and reveries of I can! You shall accomplish anything you persistently set your forces upon. You have within you the faculty for advance in any direction. Just commence Desire is the proof of ability to achieve. Doubt neither yourself, nor any one else.—Ida Gathing Pentecost.

Minard's Liniment for Summer Colds

Watch your growing children!

WATCH the health of your growing children! See that they have the health and energy necessary for their school work and play. For growing children—particularly girls—a rich supply of red blood is essential. Languor, nervousness, depression, fickle appetite or pallor indicate anaemia.

Dr. Williams' Pink Pills enrich the blood, prevent anaemia and build healthy bone and tissues. Thousands of mothers have proved this.

"My twelve-year-old girl," writes Mrs. Robert Devitt of Brougham, Ontario, "became so pale, so ill and nervous that we had to take her out of school. I tried Dr. Williams' Pink Pills for her and she gained in weight and strength. She is now the picture of health."

Buy a box of Dr. Williams' Pink Pills at all druggists and dealers in medicine or, postpaid, by mail at 50 cents a box from The Dr. Williams Medicine Co., Brockville, Ontario.

50¢ PER BOX

Dr. Williams' PINK PILLS

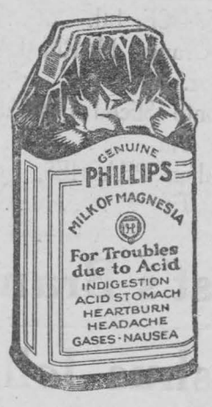
"A HOUSEHOLD NAME IN 54 COUNTRIES"

The Predominance of America

Norman Angell in the Spectator (London): Alike in Europe and America, we have slipped into the habit of assuming not merely that America is now "the great noise," indubitably the most powerful single national unit in the world, having captured an economic predominance which yesterday was Britain's, but that this predominance is bound to be permanent because inherent in the nature of things, in American superiority of natural resources, more fortunate situation in physical advantages denied to Europe. . . The undoubted superiority of America and its economic preponderance to-day is not to be explained by superiority of natural resources, but by a political fact (which gives rise, be it noted, to an economic one) The States have political unity; Europe has not If the course of historical development in North America has been more like that of South America, so that English-speaking America had been as much divided as is Spanish-speaking America; if, in what is now the United States, there existed, not one nation but a dozen rival nations—as south of the Mexican border there are more than a dozen different nations —we should not now be talking about American power and its predominance in the world. North America would figure for very little more in such terms than does South America.

President and Prime Minister

Philadelphia Ledger: In the United States there has been no disposition to question the importance or the propriety of the meeting between President and Prime Minister, though a few years ago a furore of suspicion would have been aroused by any proposal of the head of a British Government to establish direct personal contact with President Harding or President Coolidge. The gentlemen who like to ask rhetorically, "What have we to do with abroad?" will doubtless shortly be heard from. But they are likely to find that their rhetoric is much less powerful than it was before the present fortunate conjunction of men and circumstances.



Too Much ACID

Many people, two hours after eating, suffer indigestion as they call it. It is usually excess acid. Correct it with an alkali. The best way, the quick, harmless and efficient way, is Phillips' Milk of Magnesia. It has remained for 50 years the standard with physicians. One spoonful in water neutralizes many times its volume in stomach acids, and at once. The symptoms disappear in five minutes.

You will never use crude methods when you know this better method. And you will never suffer from excess acid when you prove out this easy relief. Please do that—for your own sake—now.

Be sure to get the genuine Phillips' Milk of Magnesia prescribed by physicians for 50 years in correcting excess acids. Each bottle contains full directions—any drugstore.

J. T., An African Monkey

One of J. T.'s daily amusements was looking at pictures in the illustrated magazine. She turned the pages herself without any training, the leaves passing between thumb and forefinger. After she became familiar with dogs she recognized their pictures and she would made her purry-p'r-r-r-r affectionate sound over them and turn her head coquettishly from side to side as if expecting them to respond. She showed far more intelligence in recognizing pictures and keeping a magazine right side up than the majority of African natives.

One of her Christmas presents was a magnifying glass, and she would go about examining objects and people, adjusting the glass to suit her vision in a surprisingly human way.....

J. T.'s ability to see small objects as well as her delicate sense of tuoch was shown in the care with which she would rip fine stitches from cloth. Sometimes when I was sewing or reading and did not want to be disturbed, I would give her an old garment. She would then sit quietly on my lap by the hour and industriously rip out the stitches without tearing the fabric.....She used a needle and thread exactly like a child who attempts to sew for the first time, often when I was called away to attend to some household duty I would return to find my sewing drawn into puckers by her efforts to imitate me. In her desire to assist me she would sit on my lap when I was sewing and with her dainty thumb pull the needle through the cloth, dropping it immediately to draw the thread tight.....

Common sense, patience and sympathy are the qualities needed for the study of animals. Equipped with these and a desire to do honest work, one cannot help learning something of value to add to our knowledge of dumb creatures.—From "J. T., Jr.: The Biography of an African Monkey" by Delia Akeley.

Mr. Dawes Stays Dry

New York World: Mr Charles G. Dawes, our Ambassador to Great Britain, has let it be known that no liquor will be served at the Embassy so long as he occupies it. "I never made it a practice to serve liquor in my home in the States," he said, "and see no reason to change now." And while it may be doubted whether his motive is quite so simple as that, he certainly deserves no criticism. He raises no tedious point of law, yet places himself in an excellent position with regard to a question that becomes, from a international point of view, continually more difficult.

Minard's Liniment for Neuralgia.

Alcock and Brown

Detroit News: (Bruce Gould, in his book "Sky Larking," predicts that 100 years hence Captain John Alcock and Arthur E. Brown will be honoured above all other pathfinders of the air.) The acclaim that should have been theirs was denied them. It may be, as Mr. Gould suggests, that all countries were too near the dangerous days of the war period in 1919 to properly appreciate Brown and Alcock. The world was tired of heroes, in fact there were more of them than there were jobs, and in the news of the monumental proceedings at Versailles which were then being pushed to a conclusion, Alcock and Brown were quickly forgotten.

The inferiority complex would be a fine thing if the right people had it.
