

ELECT OFFICERS

H. A. Gilmer Heads Iroquois Lions Club

H. A. Gilmer, owner of the IGA Foodliner here, was elected to head the Iroquois Lions Club during the coming term. The announcement was made at last week's meeting of the club held in the new town hall, opened over a month ago. Included in the nominating committee's recommendations, accepted unanimously by the club membership, are the following appointments: Charles W. Hodgert, 1st vice-chairman; Kenneth Kirby, 2nd vice-chairman; Alex. Banford, 3rd vice-chairman; D. L. G. Davis, secretary-treasurer; Keith Beaupre, tall twister; Ross Playfair, Lion tamer; directors, Ronald Gilmer, Garnet Loucks, George Peralut and Thomas Millar. Retiring president is Clifton Davis who served two terms.

Iroquois Lions Club now has 35 members.

The club met in the town hall for the first time since they were forced to move from the old town hall which was torn down last year. The new hall, one of the most modern in the riverfront areas, has an auditorium capable of holding over 500, a large stage, police room and two jail cells; modern, well equipped public library serving Iroquois and Matilda Township; Red Cross rooms, dressing rooms off the stage, two drinking fountains; washroom facilities, as well as large clerk's office and council chambers.

Included in the building is a clockroom with modern checking facilities, a garage for storing town or police vehicles. Abutting to the town centre is a fire hall with a drying tower where hoses are hung to dry. At the top of the tower is a lookout for the civil defence organization.

Celebrate 50th Wedding Anniversary

Mr. and Mrs. Frank Sisty, Iroquois, were at home to their relatives, friends and neighbors on May 25th, the occasion being their 50th wedding anniversary. They were the recipients of many cards, flowers and gifts including a family gift of an occasional chair, T.V. lamp and a gold pin; a pop-up toaster from their neighbors and a table lamp from the members of the Ladies' Auxiliary to the Canadian Legion, Branch 370, Iroquois.

Mr. Sisty came from Atella, Italy, in 1899, and Mrs. Sisty came from Potenza, Italy, in 1908. They were married in Montreal, Que. on May 25th, 1908, and immediately came to Iroquois where they have resided their entire married life. For 50 years they have operated a market garden supplying the town with fresh vegetables and plants.

Mr. and Mrs. Sisty have four sons, Sebastian, of Kingston; Tony, Cardinal; Cooke, Iroquois; and Frank, at home, also seven grandchildren, and seven great-grandchildren.

Due to the construction of the St. Lawrence Seaway, they were forced to move and took up residence on the 3rd Concession, Matilda Township, and are still operating their market garden and serving the town as usual.

JUNIOR W.A.

The Junior W.A. of Iroquois United Church will meet Wednesday, June 4th at 8 p.m. at the shopping plaza.

CANADIAN PRO WINS TOP GOLF PRIZE

At Las Vegas, Nev., congratulations are offered to Stan Leonard, left, by Bill Casper after Stan had sunk the last putt to give him the first prize of \$10,000 in golf's Tournament of Champions. Leonard, the Vancouver pro who did not hit the tournament circuit until last year, will also collect close to \$10,000 for his share in the Calcutta pool in which a total of \$226,000 is divided among players and "purchasers" of players. Casper, a U.S. pro, who led Leonard at the beginning of the last round, lost the game on the 17th when his ball went into a lake.

Died Monday

Charles W. Strader, a Brinston resident, who was held in the highest esteem in his community and the entire township of Matilda, died suddenly Monday shortly after the noon hour. Mr. Strader was stricken with a heart attack and passed away before medical aid could reach him. Mr. Strader was in his 73rd year.

An active and popular member of the community, he took great interest in any activity in the area, taking an enthusiastic part in organizing and promoting anything in the community's welfare. He was a member of Friendly Bros. Lodge, the Community Centre Board Treasurer of the Brinston United Church and had been secretary of the Oddfellows Lodge for 45 years.

The funeral was held Wednesday afternoon at 2 p.m. from Fairbairn's Funeral Parlors to Brinston United Church, with Rev. C. A. Adey in charge of the service. Interment in Sprucehaven Cemetery, Brinston.

First Meeting Of Year For St. Cecilia's CWL

Mrs. Len. Serviss was hostess to the first regular meeting of the Subdivision for the year 1958-59, at her home on Thursday evening, May 22nd. Rev. F. Terrier led in the Spiritual exercises; the new president, Mrs. Wilfred Hagarty, presided over the business session. Prayers were offered for the repose of the soul of a former member, Mrs. Ellen Gibbons, who died May 16.

It was decided to draw up a tentative list of conveners in preparation for Lions' Club dinners for fall and winter. It was reported that flowers had been sent to a parishioner in hospital in Cornwall and that gifts had been procured for the First Communion class. The following were appointed conveners of standing committees for the year: Mrs. Frank Sweeney, Spiritual, Altar etc.; Mrs. Hugh Matheson, Press and Magazine; Mrs. O. Pigeon, Library; Mrs. W. A. Gibbons, Social Action, Citizenship, Immigration; Mrs. E. Provost, Stamps.

Arrangements were completed for catering for a wedding breakfast following a parishioner's marriage, June 7th. A pleasant evening closed with a social hour and refreshments.

Personals

Mrs. Margaret Fawcett, of Ottawa, spent a week with Mrs. Adele Banford assisting her. She also called on friends while here.

Mr. and Mrs. Roland Gammann, of Ottawa, were weekend guests of Mrs. Adele Banford.

Mr. and Mrs. Donald Eichner and daughters, Linda and Judy, of St. Catharines, Ont., spent a week's holidays with the former's parents, Mr. and Mrs. John Eichner.

Mr. and Mrs. Carmen Caldwell and Barry spent Sunday in Brockville, visiting with Mrs. S. Burleigh who is a patient in the Brockville General Hospital. Mrs. Burleigh suffered a heart attack last week while visiting with her daughter, Mrs. Caldwell.

Elvin Wilson, Iroquois, spent the weekend with his girl friend, Marilyn Lawrence and Mr. and Mrs. Roy Lawrence and Owen, of Napanee.

"At Home" Held At St. John's Rectory

The Rev. R. W. and Mrs. Smith were "At Home" to parishioners and friends in the new St. John's Rectory, Lakeshore Drive, Iroquois, on Wednesday afternoon and evening, May 21st, 1958. The Rector said the Service of "The Blessing of the Home".

The rectory was built by Ontario Hydro under fits rehabilitation program and is constructed of Pelee sandstone, being a two-storey house, with a breezeway and attached garage. The tea table was decorated with yellow, white and mauve mums and throughout the house there were tulips and mums. Those pouring tea were: Mrs. L. Scott, Morrisburg; Mrs. L. F. Macmorine, Ingleside; Mrs. Gordon Dangerfield, Mrs. A. D. MacLellan, Mrs. Keith Fisher, Mrs. M. Fetterly, Mrs. Ambert Brown and Mrs. J. Styles.

Among those attending from out of town were: The Rev. H. O. and Mrs. Hodder, Cornwall; The Rev. L. J. F. Macmorine, Ingleside; The Rev. R. and Mrs. Strauchan, Winchester; The Rev. L. and Mrs. Scott, Morrisburg; The Rev. W. R. and Mrs. Wright, Ottawa; Mr. and Mrs. A. W. Little and Miss Patricia Little, Ottawa; Mrs. Golda Redden, Cardinal; Mrs. T. Murdoch, Cardinal and Miss Vera Wright, Cardinal.

Camp For Blind

A summer camp for the blind people of Ontario will be held at Ancaster (near Hamilton) from July 29 to August 8 and August 12 to 22.

The camp which is organized under the auspices of The Canadian National Institute for the Blind and The Canadian Council of the Blind is free including transportation to persons in receipt of Blind Persons Allowance or persons who cannot afford to pay a very nominal fee.

Blind people are encouraged to take sighted escorts. Applications for summer camp should be made to The Canadian National Institute for the Blind, 102 Pitt Street, Cornwall, Ontario. The camp provides a diversified recreational program including swimming, horseshoe throwing and dancing. Handicraft classes are a help for those who are interested.

Those who have attended the summer camp report that it is a very pleasant holiday and change from the regular routine of living.

French speaking blind people who have little knowledge of English generally attend the second camp period.

News Notes

HOME COOKING

The W.M.S. of Knox Church will hold a sale of home cooking in the church hall on Saturday afternoon, June 7, at 3 o'clock.

LAWN SOCIAL

The White Church will hold a lawn social on the church grounds Wednesday, June 15th.

FOOD SALE

The W.M.S. of the White Church will hold a food sale on Friday, May 30th at the SS Room of the United Church in the shopping plaza. Sale starts at 7.30 p.m.

TO ATTEND SERVICE

The Oddfellows will attend Divine Worship in the Brinston United Church on Sunday afternoon, June 1st, at 2.30 p.m.

TRANSFERRED

F. T. Roffey, a member of the staff at the Royal Bank branch here, has been transferred to a branch of the bank at Perth, Ont. Mr. Roffey came here in September last year.

IN HOSPITAL

We are sorry to report that Mrs. Earl Fawcett has been admitted to the Winchester Hospital. Her many friends wish her a speedy recovery.

EXPECT 100,000

Influx To See Flooding This July 1st

Interested by the people of Canada and the United States in flooding of the headpond for the St. Lawrence Power development has exceeded all expectations. It is estimated that upwards of 100,000 people from all parts of Canada and the U.S. will come to this area during that period to see the geographic changes brought about by the inundation of the old shoreline in the international rapids section of the St. Lawrence, C. G. W. MacIntosh, Information Officer of the St. Lawrence Power Project, told the luncheon meeting of the Cornwall Kiwanis

Club. Visiting Kiwanians were present from Ithaca, N.Y., Montreal and Ottawa.

This has created a problem for Ontario Hydro. The terrain on both sides of the border is flat and the only suitable viewing place is on Cornwall dyke which gives adequate height and also provides a safe location for spectators to see the flooding. The target date for the flooding is July 1st when A-1 cofferdam, about 2 1/2 miles upstream from the powerhouse, will be blown up. Great precautions must be taken to assure that no one is any closer than a two-mile radius

from the scene of the blast. This will mean that only a mile and a half long section of the dyke, north of the powerhouse, can be used for viewing by spectators. All traffic on new No. 2 highway will have to be halted around the time of the blast and patrols will have to check to make sure that no one is in the area to be flooded.

It is estimated that the water will take about 25 minutes to rush from the cofferdam area to the powerhouse after the blast takes place. The initial wave of water should be quite spectacular but afterward, the filling process will be slow and will re-

quire about four days to raise the water to the necessary depth. The estimated total of 158-billion gallons of water will flow into the headpond sector and create a new lake about 80-miles square.

Plans are now being made to provide a safe lookout on Cornwall dyke for the visitors who come to the area during the inundation period. Pathways will be constructed up the dyke's downstream face, and a viewing area about a mile and a half long will be provided. Parking facilities will be provided in the area for the cars and buses. The influx of visitors from

both Canada and the United States will create traffic problems. Police officials are making plans with Ontario Hydro Security force to handle the expected large crowds.

The city of Cornwall is planning a series of events for the four days so that visitors, after viewing the flooding, will have interesting attractions such as sports events, fire works displays and other features. It now appears as though there will be four very busy days in the Cornwall area and at the powerhouse site. The visitor traffic will be the greatest in the three years history of the development.

THE IROQUOIS POST AND MATILDA ADVOCATE

VOL. XXXVI No. 4

Authorized as Second Class Mail, Post Office Department, Ottawa.

IROQUOIS, ONTARIO, THURSDAY, MAY 29th, 1958

\$2.50 Per Year In Advance

MRS. A. C. CASSELMAN

Ready To Stand For Riding PC's

FINANCIAL REPORT

S.D. District School Budget Up

A financial statement issued by the South Dundas District High School Board shows that the estimates for 1958 have been set at \$162,970.53. This is what the board anticipates it will cost to operate the two schools at Iroquois and Morrisburg during 1958.

In 1957 the board estimated expenditures at \$140,100 but used only \$135,151.90. This year's estimates are up some \$27,000 to operate the South Dundas District High Schools, instruction and plant operation, as well as transportation taking the biggest slice of the increase.

Under the equalized assessment system Iroquois Village pays 18.71% of the levy; Matilda (part in District) 28.35%; Morrisburg 24.69% and part of Williamsburg 28.25%. Iroquois' assessment is \$1,546,352; Matilda (part) \$2,342,925; Morrisburg \$2,040,868; Williamsburg (part) \$2,335,497. Levy for maintenance (as above order) \$13,861.86; \$21,003.95; \$18,292.33; \$20,929.86 for a total levy of \$74,088 to come from the pockets of the ratepayers of the area served by the two district schools.

The remainder of the monies needed to finance the education system in the two schools comes from grants and other sources. Under the subheading "Maintenance Revenue" will be found a table of these sources and the amounts provided.

MAINTENANCE EXPENDITURES

	1958	1957 Actual	1957 Estimated
Instruction	90,980	75,111.70	83,000
Instructional Supplies	7,165	5,503.65	5,600
Administration	5,860	5,055.61	4,700
Plant Operation	14,385	11,265.99	9,000
Plant Maintenance	4,525	3,278.46	3,000
Auxiliary Services	1,725	4,380.75	3,700
Fees to Other Boards	2,300	2,298.89	2,200
Transportation	27,700	24,125.70	24,000
Capital Outlays	4,280	3,727.65	4,400
Extraneous Payments	3,450	106.41	500
Interest	500.53	297.09	
	\$162,970.53	\$135,151.90	\$140,100

MAINTENANCE REVENUE

Surplus as at January 1, 1957	11,326.72	12,697.55
Provincial Grants	72,515.81	62,443.70
Revenue from Other Sources (excluding taxes)	5,040.00	10,068.01
Total Revenue from Sources	88,882.53	85,209.26
Other Than Taxation	74,088.00	60,711.46
Tax Levy		
	\$162,970.53	\$145,920.72

The population of Iroquois is 1197; Matilda 3005; Morrisburg 2157 and Williamsburg 2992.

Editor's Note: We would extend thanks to M. C. Wallace, Secretary-Treasurer of the South Dundas District High School Board for compiling this accurate statement for the ratepayers of the communities served by the board and to the board for authorization.

Bonus Buck

Bidding Takes Sharp Increase

Bidding for articles on the Bonus Buck auction last Friday night jumped to a new high as customers dug down to their last Buck in some cases, to take home worthwhile premium. From a low of 12 Bucks for a straw hat to a high of 310 for an electric frying pan worth \$24.95, the bidding went fast and furious prompted by auctioneer Mahlon Zeron.

Bidding around the 100 Buck mark was not uncommon from the crowd which had grown from the first week, showing the interest being taken by customers. The parking lot at the plaza had another "bumper" crop of autos.

Those looking forward to bidding in the next auction on Friday night at 9 p.m. might be interested in reading what others are paying and what they are getting free in exchange for their Bonus Bucks. A drill set, the first item on sale went for 35; hammer, 100; a hacksaw went to a young villager for 80; door mat 100; a gallon of floor wax for 47; the top banana, an electric frying pan went for 310 in a close contest; a sander for 35; plastic pail 42; three boxes of nylons went for 40 Bucks each; doll 75; panda 90; straw hat 12; disposal pail with pop-up lid 32; set of dishes 110; record stand 145; car brush 105; \$11 grocery basket 160; tea pot 67; carton cigarettes 100; soft ball 30; and a mystery box, containing a handful of suckers went for 75 Bucks. In addition, however, the mystery box owner received a \$5.00 voucher for gas, as consolation for having the nerve to bid for and open the box in front of the audience.

The purchasing committee announced this week's auction will have many more items than usual but the value of each item will be more uniform to give more people an opportunity to bid and take home a free premium. Values will range from one dollar to over five for each item.

Grant F. Lavis Passes Away At Whitby

Grant F. Lavis passed away at Whitby, Friday, May 16, of a sudden heart attack. Deceased was born April 18, 1894, in the township of Williamsburg.

He was the eldest son of the late Mr. and Mrs. Allen W. Lavis, Morrisburg, Ont.

He had been engaged in the teaching profession in schools in Toronto for over 30 years.

Surviving are four sisters, Mrs. George H. Mullin, Iroquois; Mrs. R. J. Fitzmaurice, Ottawa; Mrs. Archie King, North Bay, and Mrs. Roy Burkholder, Larder Lake, Ont. Also one niece and two nephews.

The funeral service, held at 1 p.m. Monday in the H. C. Fairbairn Funeral Parlors, Iroquois, was conducted by the Rev. C. A. Adey, with interment in the Fairview Cemetery, Morrisburg. Pallbearers were Messrs. Ernest Marcellus, Aden Marcellus, Ray Seeley, Ellery Casselman, Harry Smyth and Lyle Casselman.

Buy Sweeper

Latest addition to the village's equipment is the motorized sweeper which Monday afternoon started its first clean-up of the parking lot at the shopping plaza. The vacuum machine sweeps up the dirt, blows it into a drum-like container on the back end and then when he drum is filled, dumps it out ready to be carried away from a central dumping area.

Iroquois Council purchased the new machine for a little less than \$3,000. Reeve Lloyd Davis said this week. It operates up to a maximum speed of 15 miles per hour and after an operator becomes experienced with the machine, could clean the 500-space parking lot in short order.

First results Monday afternoon were considered excellent as Garnet Loucks, a village employee, drove the machine in its maiden run. A representative from the manufacturer explained its operation and stayed until the machine was performing to satisfaction of the Council members who gathered at the plaza to see it operate.

MRS. A. C. CASSELMAN

Mrs. A. C. Casselman, of Prescott, widow of the late member, has announced her stand for the P-C Nominations to be held soon. This picture taken on the night of "A. C.'s" last Parliamentary victory of March 31st, could illustrate the faith with which Mrs. Casselman faces the future.

Mourn Loss

Mrs. E. F. Hodge Funeral Held Saturday

Iroquois and district relatives and friends were shocked when they learned of the sudden death of one of Iroquois' highly respected citizens in the person of Mrs. Minnie M. Hodge, who died suddenly at her home here on Anne Street, Thursday morning, May 22nd, at one o'clock from a heart seizure. She was in her 70th year.

Mrs. Hodge was born at Hainsville, and was the last direct descendant of David Thompson and his wife, the former Mary Ann McIntosh. In 1912 she married Edward F. Hodge who predeceased her in 1943.

She had been a life-long citizen of Iroquois and district, having spent the past seven years in Old and New Iroquois, where she had made many warm friends who greatly regret her demise.

Surviving to mourn the loss of a loving and devoted mother are one son, Graham Hodge, and Mrs. Bert Kirby (Marguerite) both of Iroquois, and one grandson, Ronnie Kirby, also of Iroquois.

The funeral was held on Saturday afternoon, May 24, at the W. E. Fitzsimmons' Funeral Parlor, at two o'clock with Rev. A. D. MacLellan, minister of Knox Presbyterian Church, Iroquois, officiating. He brought words of comfort to the bereaved family, using as his text the 23rd Psalm, a favourite passage of deceased. Mrs. Olean English accompanied by Miss Margaret Kaine, contributed a solo "Breathe on me, breath of God".

Interment took place in the family plot at Point Iroquois Cemetery.

The pall bearers were J. A. Grisdale, Ben Johnston, Arthur McInnis, Clifford Martin, Stewart Thompson and Harold Milligan.

The numerous floral tributes and the large number attending the funeral, bore silent testimony of the high esteem in which Mrs. Hodge was held by a wide circle of friends and relatives.

Relatives and friends attending the funeral were from Montreal, Toronto, Ottawa, Cornwall, New York State, Prescott and surrounding district.

We wish to extend our heartfelt thanks and appreciation for the many acts of kindness, messages of sympathy and beautiful floral tributes received from neighbours, relatives and friends.

VILLAGER PASSES

Albert D. Disheu, 72, passed away at his home early Tuesday evening. Mr. Disheu was in his 54th year. Funeral service will be held Friday at 2 p.m. at the W. E. Fitzsimmons' Funeral Home, Branch 370, Canadian Legion, will hold a service Thursday evening at 8. Interment in Point Iroquois Cemetery.

Mrs. A. C. Casselman, widow of the man who represented Grenville-Dundas 37 years in the Dominion Government and became Dean of the House of Commons, is allowing her name to stand for the Progressive-Conservative nomination expected to be held in a few weeks.

Mrs. Casselman has stated she had reached her decision at the week end only after a careful and heart-searching examination following a flood of requests, by letter, phone and personal calls.

"My foremost reason in reaching this decision stems from the sincere requests that have literally poured in asking me to serve this riding in which I have taken a continued interest since moving here with 'Cass' following our marriage in 1946. I have received only kindness and friendship from the people of Grenville-Dundas and, win or lose, their interest will always be uppermost in my thoughts."

Mrs. Casselman said she had not thought of the possibility of her contesting the nomination following the unexpected death of "A. C." on the eve of the opening of the 24th Parliament. But, within a few days, calls began coming in, urging her to let her name stand, and offering support from every part of the riding.

"I feel an obligation to repay this trust shown in me," she stated. "My interests are here. Regardless of the future, our home would remain here and our children would belong to this district. Cass' roots were deep in this area which he loved so much, and of which I feel I am now a part."

Mrs. Casselman was brought up on a farm. This experience gave her a working knowledge of the farmer's problems and wishes that would be invaluable to her should she be chosen to represent this riding with its mixture of agriculture and industry.

Discussing the word that others had made known their decisions to contest the nomination, Mrs. Casselman stated, "I welcome an honest contest at the nominations, for I feel it is in the interests of the district that the people should have an opportunity to make their choice from among able contenders."

"I wish to stand alone and be judged on my merit, and do not expect sympathy for my personal loss to influence people's appraisal of me."

"If I should lose, there will be no resentment. I will continue to do whatever I can for this historic old riding. I will always appreciate the honor conferred upon me by my friends who believe I can represent them with credit."

"I feel I have been blessed with good health, education and experience. I believe I have come to the time when I should make some personal sacrifices as a result of those blessings."

Mrs. Casselman is a daughter of the Honorable Mr. Earl D. MacLellan, minister of Knox Presbyterian Church, Iroquois, officiating. He brought words of comfort to the bereaved family, using as his text the 23rd Psalm, a favourite passage of deceased. Mrs. Olean English accompanied by Miss Margaret Kaine, contributed a solo "Breathe on me, breath of God".

Interment took place in the family plot at Point Iroquois Cemetery. The pall bearers were J. A. Grisdale, Ben Johnston, Arthur McInnis, Clifford Martin, Stewart Thompson and Harold Milligan.

The numerous floral tributes and the large number attending the funeral, bore silent testimony of the high esteem in which Mrs. Hodge was held by a wide circle of friends and relatives.

Relatives and friends attending the funeral were from Montreal, Toronto, Ottawa, Cornwall, New York State, Prescott and surrounding district.

We wish to extend our heartfelt thanks and appreciation for the many acts of kindness, messages of sympathy and beautiful floral tributes received from neighbours, relatives and friends.

Seaman's Body Found Floating West of Locks

The body of a 35-year-old seaman was found floating in the canal west of Lock 25 last Wednesday night, having apparently fallen from a passing ship. Provincial Police reported the man's name as Ulric Smith, 35, seaman on the "Selkirk", whose skipper reported the man missing May 11th as the ship went West through Iroquois.

Reports indicate the victim may have fallen from the ship and drowned. No one seems to have seen or heard any noise when he fell overboard.

Con. Herb. Myer, OPP, Morrisburg, investigated. Dr. C. R. Marcellus, coroner, was called and the body removed to W. E. Fitzsimmons' Funeral Home, here, awaiting arrival of relatives. The seaman was from Gaspe.

at the time of the loss of our dear mother, Mrs. E. F. Hodge.

Our sincere thanks to Rev. A. D. MacLellan for his inspiring words and kindness, to the pall bearers and to Nina Milligan and Dorine Thompson for their kind assistance.

Graham Hodge, Mr. and Mrs. Bert Kirby and Ronnie.

A Gossip: One who burns the scandal at both ends.

ANNE HIRST

Your Family Counselor

"Dear Anne Hirst:

I am 18, and hope to graduate this month. I have been having trouble with my parents. After school I do household chores at home, cleaning, cooking, etc. Then I like to go to my girl friend's house, or to a nearby confectionery store. My parents think this is wrong.

"I get home before 11 but they have come after me several times, and lately have forbidden me to go out at all. They think I'll get a bad name! Never in my life have I done things to be ashamed of, and I am tired and sick of this; something had better happen soon.

"Also, I am not allowed on dates, or at any social places where boys might be. . . . What is the answer?"

DISCOURAGED

Unless your parents are oversolicitous, or regard you as a 14-year-old who can't be trusted, it is difficult to interpret their attitude. Why don't they allow you to meet nice boys? It is natural that they want to know where you are, but to shadow your footsteps and drag you home publicly is humiliating.

Perhaps because you have got yourself in the habit of leaving home every night, you are in a dull rut. Why not encourage your girl friend to drop in at your house occasionally? It is too bad that there aren't others of your age to make up a group so you could have more fun. (Incidentally, a nice girl isn't seen regularly at corner stores, or other public haunts; it does her no good. On that, I agree with your mother.)

I wonder whether she would

care to write me herself? Perhaps I could give her a few ideas that would brighten your pattern of living. You three might have a happier life together, undisturbed by these differences.

Sit down with your mother and father and ask them frankly why they forbid you to date boys. There must be some in your neighborhood whose families they know? A girl 18, about to graduate, should surely conduct herself properly, and be entertaining friends in her own home.

Don't be antagonistic in your attitude, though I understand the temptation; talk quietly, and let them see how much you want to cooperate. I hope you will be enjoying yourself soon, and with your parents' approval.

"Dear Anne Hirst:

I dated a young man for nearly a year, and loved him so much I finally promised to marry him soon. (That would have been within a month.) But one night he didn't behave himself, and I sent him away without saying why.

"Shouldn't I have explained? Can I now? We had never had any quarrels about anything! . . . I am so confused (and so lonely) that I don't know the right thing to do. What is it?"

JACQUELINE

Nothing. The young man knows why he was dismissed. If he had really loved you he would have begged your forgiveness and given his word that you could trust him completely. Certainly he would not have allowed a month to pass without trying to make amends. A man in love can make no mistake, but if he is sincerely sorry he never offends again. You will not want to believe me, but I'm afraid he would have found some excuse to avoid marriage. . . . I am so sorry! It is a devastating shock to realize he did not deserve your love.

Difference between parents and their daughters disturb a family's happiness. Anne Hirst has been able to explain the generations to each other, and will try to help. Write her at Box 1, 123 Eighteenth St., New Toronto, Ontario.

Real Book-Worms

Friends of a man living in Indiana thought that he was just another book collector. They were never invited to examine his collection, so they were amazed recently to learn that when he handed the books over to a university they were valued at five million dollars.

Booksellers say that despite the rival attractions of television, radio and films, book collecting is as popular as ever, although rare books worth fortunes are harder to find than they were in Victorian days.

The possessor of a book which he believed to be unique was annoyed to hear that another copy of the book had turned up in a secondhand bookshop in Paris. He spent \$90 to and from Paris, bought the book for \$3,000 and threw it into the fire so that his own copy might remain unrivalled.

Machiabechi, a librarian and bookworm of Florence, lived, ate, drank and slept among his books. His house was the end—cramped from floor to ceiling with volumes. The only place one could walk in his house was the narrow passage left between the books. Even the porch and stairways were crammed tight.

This strange man always slept on a bed of books. He covered himself with an "eiderdown" of large, soft-bound volumes.

ISSUE 22 — 1958

Seaman's Slang Stumps Lawyer

When is a kitchen not a kitchen? When it's a galley. Almost everything on board a ship has a different name from its equivalent ashore. Floors are decks, heads, and the walls are bulkheads.

Why should this be? Well, galleys are galleys simply because that's what they've been called for centuries. That's why companionships are staircases, and ports are windows. Seamen are responsible for having handed down this jargon from another age.

A seaman who appeared as a witness in court was asked by a lawyer: "Where exactly was the defendant when you first saw him?"

The sailor looked blank: "I'm sorry sir — I don't understand. What's the defendant?"

With heavy sarcasm the lawyer asked the court to explain the meaning of the term. Then said: "Now perhaps you can answer my question."

"Oh yes, sir," rejoined the sailor brightly, "he was on Monkey Island."

"Monkey Island?"

"Yes, sir, just abaft the binacle."

"Please be more explicit," snapped the lawyer, beginning to reddens as titters rippled round the court.

"It was over the after end of the bridge — you know sir — just on the fore side of the fidley," explained the sailor — getting his own back with a vengeance.

"Order! Order in court!" called the usher as soon as he could control his own laughter.

A few seamen have sense enough to take steps to simplify these nautical terms for the benefit of the uninitiated. The west country bargee, for instance, who has to call on his wife to steer when working through narrow rivers takes extra precautions.

Realizing that "port," "starboard," and "amidships" mean nothing to her, he places a bucket on one side, a broom on the other, and the coal shovel from the balcony in the middle.

"Hard-a-bucket!" he calls, and the helm is put unhesitatingly to "hard-a-starboard."

"Hard-a-broom!" and over goes the helm to "port."

"Galley shovel!" Back goes the helm to "amidships."

There are good reasons for all of these nautical nicknames.

Why should men be referred to as "hands"? Another little story in this connection concerns the seaman who was on the carpet charged for being late on watch.

"The boy who came down to the mess-deck to wake the watch shook all hands but me," he stated in self-defense.

The boy to whom the remark referred, a newcomer to seafaring, promptly blurted indignantly, "Excuse me, sir — I never shook hands with anybody!"

A ship never "moves," she "gets under way." If she is not "under way" she is "lying" somewhere. Lying at anchor in a river she is said to be "in the stream."

There was an occasion when a British warship paid a "show the flag" visit to New York. Two of her crew were enjoying a drink in a bar on 12th Avenue.

"Hiya boys," was the friendly greeting of a burly American "Who's your ship lyin'?" asked the Yankee.

Casually one replied, "She's lyin' out in the stream."

There was a long ominous silence. "Say bud," said the American, "the Hudson River rises the other side of the Catskill Mountains, over 300 miles from here. At Tappan Bay it's five miles wide. The first successful steamboat was operated by Fulton on this same Hudson River — 150 miles of it is navigable. Even your Queen Mary can come in here at any state of the tide. This river serves the biggest concentration of shipping in the world. Son — is your ship still lyin' in the stream?"

And she was.

Modern Etiquette

by Roberta Lee

Q. My husband and I took some guests for an auto ride recently, and I sat in the front seat with my husband, our guests in the rear. I have been told this was wrong. Was it?

A. Yes. You should have asked one of your guests to sit in front, while you sat in the back with the others.

Q. If one is eating in a restaurant where small butter pats are served in little paper containers, is it all right to let the knife rest on the pat when not in use?

A. Never. The knife, when not in use, should rest along the upper right part of the plate — and never, of course, with the handle of the knife resting on the table.

Q. Is it correct to write "Second" after a name, or "2nd"?

A. It is in better taste to write "2nd."

Q. Is it proper to send formal invitations to a christening?

A. No; only the family and intimate friends are supposed to be asked.

TWIN LOCATED BY PHOTO—In her Salt Lake City, Utah, home, Mrs. Alexandra Wegner holds a photo of her twin sister, Sophie Sauer, taken in Miami, Fla. The sisters, 28, separated when Soviet troops marched into their native Poland 13 years ago, said they would be reunited as soon as they could raise the money. Sophie, who works as a draftsman in Hialeah, Fla., recently learned from an aunt in Warsaw that Alexandra was living in the States.

CHRONICLES OF GINGER FARM

by Gwendoline D. Clarke

If you are not interested in Women's Institute work don't bother to read this column because it is almost entirely about the W.I. You see I was at Guelph last week to the Officers' Conference—not as an official delegate but as a newsman, picking up little bits here and there to pass on to you in this column. Not a full report by any means — that I leave for the district director of your own particular branch. I have . . . doubt she will come back with — and be able to pass on to you — new enthusiasm for our wonderful organization which, to my way of thinking, has no equal. It is the one organization which brings together urban and rural members, helping each to understand the problems of the other. At one time the W.I. membership was comprised almost entirely of farm women, centred around problems of specific interest to those living and working on farms and in farm homes. Now the picture has changed. Activities of farm women have become more varied and progressive, in fact many of their interests are very little different from those living in urban districts. W.I. programmes and projects have kept pace with the changing times embracing extra topics, cultural, educational and practical. The W.I. helps all women, rural and urban to become more efficient housewives; to save time and energy — and then helps them to put to good use the time that has been saved. Its motto is still for "Home and Country," not "country" in the rural sense but in its wider application — in Canada, in your Country and mine.

Every time I go to any of these W.I. affairs I am amazed at the distance many of the delegates have come — from Renfrew, Kincardine, Shelburne, North Bay . . . in fact the enthusiasm of those from a distance often seems greater than those nearer to the site of the Convention or Conference. Young and old, they all show an active interest.

And Smart! I'm telling you, you don't find many dowdy farm women these days. True, I didn't see any "chemise" costumes — but that is just another bit of evidence that W.I. members have a sense of the fitness of things. There were plenty of pretty dresses — pretty but conservative.

It was the first time many of the members had had a chance to see and hear our new FWIC National President, Mrs. Keith Rand. Easy, charming and completely unaffected, she spoke to the members as one woman to another, understanding their problems; helping and inspiring them to greater interest in the work of the W.I. as a whole; keeping in mind the theme of the Conference "The Challenge of Tomorrow" and emphasizing the fact that homemaking is more important than good housekeeping.

Other speakers and topics discussed were "Safety in the Home and on the Farm" by Mr. H. E. Belman, Bruce County, who said that most accidents are the result of carelessness, ignorance

and indifference to the safety of others — as, for instance, shoes and boxes left on stairs for other people to trip over. Damage and total casualties from common accidents in any one year, said Mr. Belman, is usually greater than that suffered from tornadoes and floods. Tractors and farm machinery were the greatest hazard and the most common age group in accidents was among drivers and riders of from ten to fourteen! Isn't that staggering?

Reports were also given on such projects as Auxiliary Classes for public school children; Maternal Care and Infant Mortality; T.V. and Radio Evaluation; Women Around the World in Picture and Story, presented by Mrs. Hugh Summers, World Vice-President of the A.C.W.W., taken during last year's Tri-ennial Conference.

As heaven to lighten what might have been too much serious discussion there were excellent solos. But what really brought the house down was the Goshen W.I. Orchestra comprised of four women charmingly dressed in century-old costumes. One was a pianist, one an excellent violinist; another played a guitar while the fourth kept time on a washboard with tin patty-pans! Their selections were lively old-time musical numbers; their performance so good they were called back again and again.

Now here is something I must mention. On display were some lovely china cups and saucers meant specially for W.I. enthusiasts. Good china, cups a nice shape, tall enough to keep the tea hot (how I hate those, low flat cups). Design in blue and gold, tiny gold maple leaves on a white background; gold handle and edging and the W.I. crest on the cup and in the centre of the saucer. The only place where they are sold is Guelph and they are going like hot cakes. A nice gift for a special speaker or to any W.I. member as a token gift.

Now to summarize I want specially to draw your attention to one fact. That while W.I. activities have as their primary objective ways and means to help farm women yet the topics discussed are, or should be, of interest to all women, rural and urban. Adult education, health, common safety precautions, cultural activities, all are of interest to women everywhere. Remember that if you are tempted to resign from the W.I. because you no longer live on a farm. Intermingling of town and country women is essential to a better understanding of both.

One day during the 1949 season, Ewell Blackwell fanned Stan Musial on a twitching pitch that escaped catcher Dixie Howell and enabled Musial to scamper all the way to second.

Manager Bucky Walters of the Reds heaved a sigh. "That guy Musial is so good," he groaned, "that even when he fans, a team is lucky to hold him to two bases."

Water Skiing Easy To Learn

Water skiing may look hard, but it's really a cinch, according to James Rusing, pioneer ski champion and director of the spectacular water show at Ponce de Leon Springs.

Anyone with any aptitude for sports can learn to water ski in half an hour, Mr. Rusing declared, and he has proved that statement on many occasions. He recently taught an entire family how to ski in just that time.

What is more, the would-be skier doesn't need to know how to swim, as long as he or she wears a life jacket. The jacket will hold anyone up in the water indefinitely in case of a spill. The skier merely floats in the water until the boat swings round for the pick-up.

The shallow water start is best for beginners, the champion says. But a few minutes of dry land practice, Mr. Rusing asserts, will pay off in making your first attempt at water skiing successful.

Don the skis, then sit on them close up to your heels and have a friend pull you to standing position. Here is the basic rule for water skiing — keep your elbows straight and allow yourself to be pulled by the motor — don't pull yourself. Once up, keep arms straight, knees slightly flexed.

After a few dry runs you're ready for the water. Water skiing is not dangerous, but a few precautions are sensible. If you can't swim, wear a life jacket. Should you fall, throw away the tow bar to avoid entangling yourself. Don't wrap the tow line around your fingers or arm.

A shallow-water start is easy for beginners. Sit in the water with the skis angled up in front of you, tips out of water. When the line is taut, yell "Hit it!" and the operator will accelerate to pull you up. Remember, let the motor do the work. Don't try to pull yourself up, just concentrate on keeping your arms extended and your skis straight.

Once up, says Mr. Rusing, you'll find the going is easy. Just keep in the center of the boat's wake until you gain confidence. Later you can try crossing the wake to either side, to add variety to your skiing and to enjoy the smoother water. To turn right, just press hard on your left ski and lean in the direction of the turn. Reverse the procedure to turn left.

Landing is no problem either — just pull in near and parallel to the shore, and release the tow line. You'll glide to a smooth stop and drop to the sand in shallow water.

Epistle From The Koreans

He was a Christian, and he came from Korea. His name was Oh In Ho, and he came to the promised land of America to seek guidance and education here. In the twenty-sixth year of his life he met death, by murder most foul. He had left the campus of the University of Pennsylvania to mail a letter home, when a gang of juvenile delinquents killed him with blackjacks and pop bottles.

At his funeral on Monday, Mayor Richardson Dilworth of Philadelphia broke down and wept, for the shame of his city that so dreadful a crime could occur.

Now a letter has come from Oh In Ho's parents, asking "the most lenient possible treatment within the laws of your government" for eleven teen-agers accused of the crime, and offering to set up a fund for their "religious, educational, vocational and social guidance" whenever they obtain freedom. . . .

They wish, they wrote, to turn sorrow into Christian purpose in the hope "that we can do something to minimize such juvenile criminal actions which are to be found not only in your country but also in Korea and, we are sure, everywhere on earth."

Under the circumstances, this message has an eloquence which surpasses any comment which could be made upon it. But what can we say to them?—New York Herald Tribune.

The most mama elephants rarely give birth to twins. . . . and who can blame them?

How To Keep Wives Contented

Advice to new husbands from "All About Men" by Joseph H. Peck, M.D.

"You can keep your wife contented, if not happy, without keeping her barefoot and pregnant and without buying her orchids every week, and the time to begin is before the . . . honey-moon fade."

"It may be a good thing if she has to work after marriage, but be sure it is a womanly occupation and that she doesn't bring home more money than you do. If she works, you should assume some of the housekeeping chores, but there are certain things you must not do.

"Carry out the garbage, but don't cook or wash dishes unless she is sick. You may dry the dishes, because in this case you are merely helping. Let her take the lead in such chores.

"Clean up the mess you made by dropping ashes and paper on the living room rug, but don't scrub the kitchen floor or make the beds or you will lose face. She will try to saddle her chores on you, and you may be so much in love you can deny her nothing. If so, be so awkward and sloppy that she will grab the dishcloth in disgust and chase you out of the kitchen. If extreme measures are in order, drop a favorite dish on the floor and break it. If she asks you to hang wallpaper, louse up the job and she will never ask you again. . . .

"And if she asks you to cook meals, make a mess, and I do mean mess. If you fry eggs without burning them to the pan, you'll get to fry eggs often. If you have no luck in burning them to a tasteless crisp, you might try sprinkling them with pipe ashes. But whatever you do, don't prove yourself a better cook than your wife."

LEAD, KINDLY DARKNESS
The choir and congregation of St. Barnabas Chapel, Norfolk Island, Australia, rose to sing the hymn "Lead, Kindly Light." Mid-way through the singing the newly installed generating plant failed, and the tune was completed in darkness.

Sun-fade Separates

PRINTED PATTERN

by Anne Adams

Printed Pattern that's wonderful for a busy gal's wardrobe! These separates mix-match beautifully; eliminate weekend packing worries. Blouse, shorts, button skirt—a joy to sew, wear.

Printed Pattern 4820: Misses' Sizes 12, 14, 16, 18, 20. Size 16 blouse 2 yards 35-inch; shorts 1 1/2 yards; skirt 3 1/2 yards.

Printed directions on each pattern part. Easier, accurate.

Send FIFTY CENTS (50¢) (stamps cannot be accepted, use postal note for safety) for this pattern. Please print plainly SIZE, NAME, ADDRESS, STYLE NUMBER.

Send order to ANNE ADAMS, Box 1, 123 Eighteenth St., New Toronto, Ont.

Cinch to Sew

by Laura Wheeler

Cinch to sew this pretty wrap-halter! Simple embroidery in outline and single stitch lends bright color. If you prefer, use contrasting fabrics as shown.

Pattern 732: pattern of halter in small, medium, large included; embroidery transfer.

Send THIRTY-FIVE CENTS (stamps cannot be accepted, use postal note for safety) for this pattern to Laura Wheeler, Box 1, 123 Eighteenth St., New Toronto, Ont. Print plainly PATTERN NUMBER, your NAME and ADDRESS.

As a bonus, TWO complete patterns are printed right in our LAURA WHEELER Needlecraft Book. Dozens of other designs you'll want to order — easy fascinating handwork for yourself, your home, gifts, bazaar items. Send 25 cents for your copy of this book today!

MY BOUNCY BUDDY—This straw-hatted beach ball only has eyes for Candi Scott—and with good reason. The painted-on smile is nothing to the real one Candi flashes at the photographer.

FOO ON YOU—Barbara Barnes, 17, shows a Mexican rain god how the people of the area feel about his product. The ugly little figure, a relic of the Zatopec culture of Western Mexico, may be more to blame for locally heavy downpours than what the weatherman refers to as a frontal occlusion.

Dial Telephones In The Country

It suddenly occurred to me today that the rural telephone has again become a worthy subject of contemplation, although in different ways. This came to mind as the result of asking for UNiversity 5-2222. The operator, who has long since ceased to be a near neighbor and a close friend, is a distant voice in some unknown place, and she asked pleasantly, "And where is that?"

The ancient rural lines have been dialed, you see. And as the dial systems extended themselves into the remoter regions, all these synthetic exchanges have been thought up and foisted upon us. There is no such place, of course, as UNiversity 5.

But there used to be a pleasant little community known as Freeport — about 15 miles from us and a town we occasionally call. In its earlier days this may have been a free port, whereas other waterfront localities charged wharfage, but the local legend is that the town was named for Sir Andrew Freeport in the Spectator Papers of Addison and Steele. This is a pretty little legend, and deserves our support. We should not lightly dally with a town so charmingly named.

The number we used to call most of all was Freeport 124-35, which meant three long rings and five short — a merry snort of jingling worth the ten cents the call cost. But what became of all that?

It says if you look up the number you will save time, so we look up the number, dial the operator, and say, "UNiversity 5-2222." The operator then asks, "And where is that?"

If I am not in a hurry and desire to reprimand the telephone company for compounding an absurdity, I say, "I don't know." This is mean of me and I ought to be ashamed of myself, for I know very well it is exactly the same thing as the old number, Freeport 124-35. I hesitate to say "I don't know" every time, because one night I got connected with a woman in Cambridge, Massachusetts, where there is also an exchange named University, and I had a time getting rid of her.

I think there is another University out West, for another time I talked with a man in Alpena, Michigan. "Hello," I said, "Is this Snookums?" He said it was not.

Of course, deep in the telephone company is a man who could explain why UN-5 connects you with Freeport, and why UN-3 connects you with Cambridge, and he might even explain that there really is a university in Cambridge if you know where to look. But there is no university in Freeport. So it goes.

There is now Hilltop, and Bath sits on tidewater. Brunswick is now Park View, although neither park nor view will entrance the sight-seer much.

There is a presumption on the part of the telephone company when they set up an artificial exchange for a well-known and trusty town of long standing, and then ask the customer to identify it. I made a call recently to LOcust something or other, and the operator said, "Where is that?" I said, honestly, "I don't know." LOcust is a name your company postulated for its own purposes, and I cannot bound it or describe its natural assets. I do not know if it makes shoes or packs fish. It might be east of Eggemoggin Beach, and it might be part of Pripet or Bass Harbor. It is somewhere in Maine.

"Do you know what it's near?" she asked. "I think it's near PROspect, MYstic, and TRiangle," I said. I was immediately connected

FRENCH RIOT IN ALGIERS—Right-wing rioters overturn a car during violent demonstrations in Algiers in protest against any compromise in the struggle with Algerian rebels. A mob of more than 50,000 French men and women gathered in a square while young rioters stormed the U.S. Cultural Center and occupied the French Civil Government headquarters.

with a downtown St. Louis number and the baby sitter said Mr. and Mrs. Foster were out for the evening and would be home late. I can explain how this happens, for I am a student of such things. The operator, not knowing one UNiversity from another, makes a buzz and gets connected with a route specialist. She says, "Route, please, to HARvest-5." Then the other operator says, "Boston 125, plus 2-L, plus, etc." The "2-L" means two letters, which is why they capitalize twice on all exchanges. It is just as easy, therefore, to get a wrong number in Denver as it is to get a right one in LOcust.

I resent it very much when the operator implies that I ought to know where these exchanges are. I think SHE ought to know, or that the man who made the things up ought to be kept on 24-hour duty so he can tell her.

True, telephone service has been much improved and the rates are healthy and strong. But when I meet a man on the train and we begin to talk, and we find we have common interests, and he says, "Here is my number call me up when you have a hen hot, and I'll send you some goose eggs," I can put his number in my pocket without having any idea where he lives.

When I have a setting hen I dial the operator and say, "RUst-free 7-2345!" So she says, "Where is that?" I do not know, so I say I do not know. This makes me queer to the operator, who is a rational person and assumes that anybody making a call will have some idea as to its destination. "Is that in Maine?" she says.

I don't know if it's in Maine or Costa Rica, to tell the truth. RUstfree is a telephone company place, and has nothing to do with me, goose eggs, hot hens, or rationality. "For all I know, it's in Timbuctoo," I say.

"Where is Timbuctoo?" she says. —by John Gould in The Christian Science Monitor.

ROE ON RYE

The venerable Preacher Roe had a dry sense of humor to go along with his wide assortment of "stuff", and could handle any situation that came along. One afternoon the Phillies started belaboring him. They scored four times in the first inning and were bouncing hits all over the outfield in the second, when catcher Al Lopez called time.

Lopez plodded to the mound and asked, "Feeling all right, Preach?"

Roe deliberated a moment. "Waaaaa," he drawled, "I ain't got no pain—I ain't got no fatigue—and, by golly, I ain't got a thing on the ball!"

How Can I?

By Anne Ashley

Q. How can I remove the colored letters from empty flour sacks?

A. Rub pure lard thoroughly into the letters and figures, soak in lukewarm water for a few days, then put in the boiler with soap flakes and boil. This treatment will remove all the lettering.

Q. How can I soften egg shells?

A. By putting the eggs in vinegar for about twenty-four hours, longer if necessary.

Q. How can I dry a sweater properly after washing?

A. Lay the sweater on a flat surface, turning from time to time. It will not stretch and will be soft when dry.

Q. How can I prevent the rusting of mattress springs?

A. Rub the springs occasionally with a cloth dipped into melted paraffin, and they will never rust.

Q. How can I make a rubber hot-water bottle last longer?

A. It will last twice as long if the steam is pressed out before inserting the stopper. If it is never filled more than two-thirds, and never with boiling water, and when not in use, the bag is hung with opening downwards.

Biggest Diamond?

The actual tools used by experts to split the biggest diamond in the world, the 3,024-carat Cullinan, were shown to the Queen and the Duke of Edinburgh when they visited Holland recently.

This wonderful blue-white gem of lovely quality was 4½ in. long, 2½ in. high and 2½ in. broad. An overseer in a South African mine owned by the late Sir Thomas N. Cullinan was doing his rounds one day in January, 1905, when he noticed something glistening in the half-light. Scratching at the ground near the rim of the 30-foot crater with his pocket-knife, he was amazed to find that it was a diamond three times the size of any previously discovered.

It was insured for \$4,000,000 and later bought by the Transvaal Government for presentation to King Edward VII as a birthday present. The king had the diamond split in Amsterdam into nine stones. He called the biggest diamond "Star of Africa" and had it embodied in the Royal Sceptre. The next three in size, all large gems, were named "Lesser Stars of Africa." The biggest of these was incorporated in the Imperial State Crown and the other two in the late Queen Mary's Crown. The final five stones and a number of the small brilliants were used to make a diamond collar for Queen Victoria which, years later, was handed on to Queen Mary.

Some diamond experts of today cling to an old belief that the original Cullinan Diamond was, because of its flat-sided shape, the broken half of one enormous gem.

When this idea was first put forward, search parties backed by wealthy syndicates tried vainly to find the so-called "missing half". One persistent rumour declared that it had been found and hidden by a native. Innocent natives were trailed by police for weeks. On one occasion a detective from Johannesburg went alone into the bush with a big sum of money, with instructions to buy the "missing half".

For years convicts working on the breakwater at Cape Town whispered strange stories among themselves to arouse curiosity among their guards. Those who succeeded in attracting attention were well treated in the hope that they would reveal the secret of the long-sought stone.

BREVITY

Two brothers, a taciturn pair, hated making speeches. At an important dinner it had been announced that they would speak, and the toastmaster called on Jonathan.

"There must be some mistake," he stammered. "David is the one who does the talking."

So the toastmaster turned to David, who stood up and said:

"My brother Jonathan has just made the speech."

Stolen Kiss Started War

Tall, fashionably dressed, wearing diamonds but thickly veiled, a slim young woman drove to a prison in Philadelphia, U.S.A., and announced that she was a cousin of a young man who had been imprisoned for a jewel theft.

"May I see him, just for a few moments?" she begged. She was permitted to speak to the prisoner through the bars of his cell.

What words passed between the couple may never be known, for the warden stood beyond hearing.

On taking leave of the convict the woman lifted her veil and imprinted on his lips a long, passionate kiss.

The convict turned, staggered to his bunk and collapsed upon it, his face buried in his arms.

Sobbing bitterly, the visitor covered her face and was accompanied to the gate by the sympathetic warden. She drove off in a limousine.

The warden returned to the cell to find the man dead on the floor. Between his lips was a piece of discoloured cigarette paper. A doctor found that this was impregnated with a deadly poison. Its effect had been practically instantaneous he said.

That "murder with a kiss" — the only authenticated instance of its kind in the history of crime in the U.S.A. — took place in 1923. The woman has never been traced. Why she gave the man the fatal kiss and who she was remains a mystery which has baffled criminologists for thirty-four years.

Kisses have sometimes proved very dangerous, if not always fatal.

When a German was on trial for "killing his wife with kissing," medical evidence was called to prove that it was possible that passionate kisses showered incessantly on the girl affected her very weak heart and caused her death. But the husband was acquitted.

In the Balkans in 1936, an army colonel was bereaved by a kiss. He was embracing his pretty young wife before setting out on manoeuvres when his revolver went off accidentally and killed her.

Another fatal kiss, given by Ferdinand of Bavaria, Germany, in 1703, led to the loss of many lives, for it precipitated a war.

He was horse-riding on an estate many miles from his palace when he saw a beautiful girl walking in the spacious park surrounding the palace of his royal neighbour. So bewitched was he by her lovely face and figure that he kissed her impetuously. What he did not know was that she was a princess of the royal family and that her fiancé had seen the stolen kiss.

A duel was fought and both men were wounded. This led to a war between the two kingdoms which lasted many months.

WHAT'S THE PITCH

The battery for the Braves was Al Javery, pitching, and Phil Masi, catching. The first Pirate stepped into the batter's box—and laced the first pitch into rightfield for a triple. The next batter hit the rightfield wall for a double.

In short order, the Pirates collected a home run, double, triple, double, and another triple—each one on Javery's first pitch—that high, hard one.

Manager Stengel (this was 1943), in disgust, waved Al to the showers. Then he called Masi over and asked, "What kind of pitch was he throwing, anyway?" "I don't know," Masi replied. "I haven't caught one yet."

"Is that eye, dear, part of your TV make-up 'or tonight?"

Pilots Bale Out In Sealed Capsules

A pilot of a Super Sabre ripping through the thin atmosphere at 42,000 feet hears a shattering explosion behind him. His machine bucks and pitches like a mustang, flames lick along the fuselage — a jet engine has exploded and by ordinary standards this should be the end of him, him, for an utterly hostile world awaits him outside the plastic canopy when he bales out.

The air is only one-sixth the density at sea-level. Sudden exposure to the reduced pressure can cause severe internal injury. And as the oxygen content is far below the amount necessary to sustain life, unconsciousness and death would follow.

The temperature outside his pressurized cabin is below zero, cold enough to freeze an unprotected person in a few minutes. At his speed of 600 m.p.h., sudden exposure to wind-blast would almost certainly prove fatal. Even if he clears the 'plane and survives the slipstream, his life will be endangered by the tumbling and spinning which will force the blood away from the heart as he plummets down. All the odds are overwhelmingly against him.

But thanks to modern science, he is surrounded by life-saving aids, Charles Coombs points out in a fascinating survey of up-to-the-minute flying techniques, "Survival in the Sky." All he has to do is "follow the drill."

Almost without thinking, he has closed his throttle, shut off fuel flow, switched off electrical circuits, in preparation for automatic ejection.

Raising the armrests of his seat jettisons the plastic canopy over his head. Instantly he is exposed to the furies of the outside atmosphere. The mask leaps away from his face as reduced pressure causes his lungs to expand, but quickly settles back. Decompression triggers the mechanism of his skin-tight nylon flying suit, high-pressure oxygen shoots through the limp bladders running along his arms, legs, sides, and as they fill, the suit squeezes him with an artificial pressure that the thin atmosphere doesn't provide.

Now he braces his body and head against the seat's back rest, presses a trigger and both he and the seat are shot into the air. The flaming tail of the 'plane flashes past beneath him, the slipstream smashes against his helmet and he starts tumbling head-over-heels.

Then the pilot detaches himself from the seat and for nearly two minutes "free-falls" down through 30,000 feet.

At 12,000 feet, when the denser air has lessened his descent to about 130 m.p.h., within the safety limits for parachute opening, a device in his parachute pack, triggered by the higher pressure, releases the parachute and he drifts safely down to earth.

A miracle of life-saving science, indeed. But Coombs records even more advanced methods. Future aircraft will operate at extremely high altitudes, and the pilot may then have to bale out at supersonic speeds in a sealed capsule.

Several have been devised and tested on dummies dropped from 'planes flying at various speeds and heights, others are being prepared. One design is made of light, strong honeycomb fibre-glass. The pilot, wearing a parachute and survival gear, sits partly inside the capsule in his usual seat. It has clamshell-like doors which open and close rather like a parrot's beak.

Apart from baling out, many other modern wonders are described in a book that will particularly engross all air-minded youth eager to understand or play a part in our supersonic future.

Starlings Take For Enemy Planes

New experiments with supersonic sound devices inaudible to the human ear were made recently in vain attempts to break up enormous flocks of starlings, often numbering 25,000, which roost nightly on tall buildings in London and some midland cities. The birds have become a serious nuisance.

Stuffed owls were also used to try to scare the winged invaders. The starlings were not deceived; they knew the owls were faked. Many showed their contempt by perching on them.

The starling population has been soaring since the end of the war. The rate of increase has amazed ornithologists. One flock which flew over a south country village was so large that some villagers at first thought it was a fleet of enemy aircraft and told the local constable.

Massed flights of thousands of starlings have become one of the modern "sights" of London. They settle on the ledges of big buildings at dusk after manoeuvring in the sky with extraordinary precision.

Some experts describe the cheerful starling as a roistering swagger among birds. It loves man's company and can adapt its habits to life in modern cities. The starling is also a clever mimic, stealing phrases from blackbirds, curlews, lapwings and many others and often imitating mechanical sounds such as the tinkling of a bell.

Piquant Sauce On Seafood Cocktail

If you are serving any kind of seafood cocktail at one of your parties this coming festive season, the following sauce is high on the list of what is different and delicious.

Blue Cheese Sauce
½ cup blue cheese, crumbled
1½ tablespoons lemon juice
½ cup chili sauce
1 teaspoon Worcestershire
½ teaspoon Tabasco
1 tablespoon prepared horseradish

Beat cheese and lemon juice until blended. Stir in chili sauce, Worcestershire, and Tabasco, then horseradish. Mix well and chill. Serve a little sauce on the seafood cocktail and have a bowlful of it for those who like to add more.

ISSUE 22 — 1958

FOR KIDS OF ALL AGES—Like the electric train for Christmas, Dad is going to enjoy this new toy rocket launcher just as much as junior. A hand-operated magnetic crane lifts the rocket from its flat-car cradle and swings it to the lower platform. The motorized tower, moving on its own track, transports the rocket to the launching platform where it is lowered onto a spring-loaded launching pad. As the motorized tower moves out of the way, the count down begins on the remote control panel, and the seconds tick away... 5-4-3-2-1-FIRE! Firing button is pressed and the rocket blasts off. The rocket has a safety polyurethane foam nose cone.

KNOWLAND'S THEIR MAN—This pretty trio is all out for William Knowland in his race for the governorship of California. And rightly so—they're all Knowlands. Center is Mrs. William F. Knowland, wife of the Republican senator. Flanking her are the couple's daughters, Emelyn, left, and Estelle. Traveling by special bus, and accompanied by a baby elephant, left, they intend to cover 5,000 miles before the June 3 primary election.

PITSTON

Mr. and Mrs. Milton Barkley, Dundela, were recent Monday evening callers on Mrs. Andrew Martin.

Mr. and Mrs. Earl Wright, Ottawa, were week-end guests with Mr. and Mrs. Presley Montgomery and Dale.

Mr. and Mrs. J. Irving and family, Shanly, were Sunday guests with Mr. and Mrs. Roy Leizert.

Mr. and Mrs. Gordon Gilmer, Shanly, were supper guests Sunday with Mr. and Mrs. Ralph Cooper.

Mrs. James Riddell and Mrs. Presley Montgomery attended W.M.S. Presbyterian held in the Presbyterian Church, Winchester, Thursday, May 22.

Mrs. Andrew Martin spent Friday with Mrs. Harry Martin, Spencerville.

Miss Wilda Sloan, Prescott, spent the week-end at her home here.

Mr. and Mrs. Kenneth Henderson and family, Ventnor, were Sunday dinner guests with Mr. and Mrs. Garnet Sloan and family and Mrs. Iva Cooper.

Sunday guests of Mr. and

Mrs. Robert Sloan and family were Rev. D. M. Ramsay, Williamsburg, Mr. and Mrs. Geo. Burchell, Mainville, and Mrs. Andrew Martin.

Mr. and Mrs. Jim Gillespie, Ottawa, and Mr. and Mrs. Bert Montgomery, Spencerville, called on Mr. and Mrs. Presley Montgomery, Sunday evening.

The anniversary services in the Pittston United Church on Sunday were well attended.

Special music was provided by the choir. The two baskets of flowers on the Communion table were in memory of Andrew Martin from Mrs. Andrew Martin and in memory of Mrs. Mary Huchcroft from the family, Geo. Irene and Leslie.

PLEASANT VALLEY

Mrs. W. J. Gilmer and Mr. and Mrs. Hilliard Gilmer spent Sunday in Prescott.

Some from here attended the funeral of the late Arthur McKenzie on Tuesday at Brinston. Mr. and Mrs. Isaac McShane spent Sunday in Ottawa.

Messrs. Arnott Conley and Keith Cowan spent a day recently with Mr. James Cowan and Orville.

Mrs. Lottie Keck, Kemptville, spent the week-end with Mr. and Mrs. Alex Fotheringham.

Mr. and Mrs. Harry Gilmer, Iroquois, were callers in the Valley on Sunday.

It takes people like Jack MacLennan...

...to give you good telephone service

Your Bell Telephone installation man — whatever his name may be — is a lot like Jack MacLennan.

On the job, his skillful work reflects his careful training. But more than that, we like to think that a friendly smile and unfailing courtesy lend a pleasant touch to his brief visit.

We try to encourage this friendly spirit all through the business. You'll see it when you visit the Business Office. You'll hear it in the operator's "voice with a smile."

This helpful, friendly spirit is one of the many ways in which we try to give you good telephone service.

You will find exceptional employment opportunities in the Royal Bank

FACTS THAT SPELL "OPPORTUNITY" FOR YOUNG MEN WITH AMBITION

1. The "Royal" is North America's fourth largest bank. More than 900 branches are in operation and new ones are being opened all the time. During the past five years we have opened 133 new branches, each one creating new managerial positions... and resulting promotions for young Royal Bankers.

2. "Influence" plays no part in advancement at the Royal Bank. Our senior officers from the Chairman and President on down started as juniors in small branches and advanced on merit alone.

3. Home study banking courses are available to all staff members. Successful candidates advance quickly.

4. For young men interested in gaining international banking experience, the Royal Bank has over 80 branches abroad... in New York, London, Paris, Central and South America, Cuba and the West Indies.

5. We have generous pension plans that compare with the best, as well as group, health and hospital insurance, at low cost to employees.

Get our booklet "Your Future in Banking" at your local branch or write Head Office for a copy.

Canada's Largest Bank

D. L. G. DAVIS, Manager Iroquois Branch

Give gifts that say: Live better ELECTRICALLY

the safe, clean, modern way!

Express your good wishes the modern way. Give the wonderful electrical gifts that promise happier, easier living for years to come. Whatever your budget, there are electrical gifts to make a bride's heart sing... an electric fry pan... a handy automatic pop-up toaster... a mixer or a steam iron. For the future man of the house there are electric shavers and a wonderful array of time saving power tools... and what couple wouldn't be delighted with one or two handsome, modern electric lamps. They'll be proud of their electric gifts and happy too because they're so economical to use.

electricity does so much... costs so little

THE GOOD DRIVER
Do you know how to adjust the front seat of an automobile, the Ontario Safety League. If so, you are exceptional. One of a very small minority.

Today's automobile is a marvel of precision engineering—but built with a wide tolerance to cover every degree of incompetent handling. Which it gets, in heaps.

There's a right way to do everything that needs to be done in a car. Even the little things like moving a seat forward. Frequently, the right way is also the rare way. Comparatively few people take the trouble to study any of the finer points of driving and car handling. The majority are satisfied as soon as they have learned the "Three S's" of elementary driver education... START, STEER, STOP.

Once a would-be driver has learned enough to get a licence he relies entirely on experience to give him his "higher education" at the wheel. Or to be more accurate, he doesn't think about it at all, having a strong inner conviction that he has nothing more to learn. It never occurs to him that a little more conscious study— from a book like the A.A.A.'s "Sportsmanlike Driving", for instance—will probably save him hundreds of dollars in years to come. Dollars that will be frittered away in bumps, scratches and crashes; and in excessive depreciation due to incorrect car handling and maintenance.

Cars have a wide tolerance for faulty handling. Drivers should have tolerance too, an attitude-tolerance for the mistakes of other road users. But the good driver aims at doing things right, all the time... he doesn't care to depend on the tolerance of others.

It's amazing the number of things one can remember having forgotten.

Here & There

by Kay Kay

Nature is a wonderful thing and as we see the neighbourhood's population of pets steadily mounting, we are no less amazed. There's nothing like having a loved pet around the house and if, after you've read this far, you agree with us then keep on reading because we have an offer to make you so that you, too, can enjoy this feeling that nature is wonderful. You see, we have four kittens at home, neatly tucked in a cardboard box and steadily getting stronger. All leading up to the fact that we are looking for homes for the tikes (didn't have the heart to do as a friend suggested at the beginning) and we are willing to let them go on a first come, first served basis. If you want triplets, all one color, we have 'em. Three are an odd shade of red and one black and white... all are homely.

The purchase, by the corporation, of a street sweeper has left us with no excuse to complain about the mess around the plaza parking lot. Thank goodness and the council!

Don't always give your wife credit; she appreciates a little cash, too.

A farmer and a rather seedy-looking city chap sat waiting in silence for the train at the station. After several minutes had gone by, the city fellow turned to the farmer. "Excuse me," he said, "but could you loan me a cigarette paper?"

"Sure," replied the farmer, and gave him one.

A few more minutes passed, and the run-down stranger asked the farmer for some cigarette tobacco. This was furnished from a little drawstring sack, and once again the two men sat quietly.

Finally, the shabby gentleman asked the other if he might borrow a match.

"Friend," said the farmer, as he handed the other man the match, "you don't have nothin' but the habit, do you?"

Optimist: A guy who marries at the age of 89 and starts looking for a house near a school.

Two inebrates wandering through the zoo, found themselves in front of a lion's cage. They stood watching the beast for a few minutes when suddenly the lion let out a roar.

"C'mon, let's go," said the first.

"Go ahead if you want to," said the other, "I'm gonna stay for the movie."

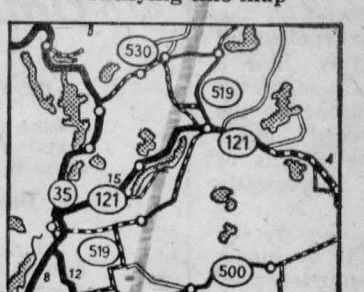

Rubbing elbows with a man will reveal things about him you never suspected. The same is true of rubbing fenders.

Cub Parents Are Asked To Help

In a special note to Cub Parents, the Cubmaster Arliss Casselman, requests the co-operation of parents this Saturday in helping to provide transportation to a Cub-o-ree at Cardinal. He requires several cars and would also like as many parents as possible to attend the meet, which will be held at the Benson School. Cars are to meet at the shopping plaza at 1 p.m. and those who can take cars are asked to call Mr. Casselman, OL 2-4870 as soon as possible. The Cub meet consists of competitive games between the area Cub Packs and gives the boys a wonderful afternoon mixing with other Cubs. At 4 p.m. there will be a box picnic supper, each Cub to bring his own lunch. Drinks will be on sale at a minimum price.

How well do you know ONTARIO?

Check your knowledge by identifying this map

However well you know Ontario, you'll enjoy getting to know it better. Make a point this year of exploring its highways and byways, visiting its lovely lakes and vacationing at one of its modern resort areas... like the Haliburton Highlands shown above. CARDS OF THANKS

The family of the late Grant P. Lavis, wish to extend their sincere thanks and appreciation to their friends and neighbours for acts of kindness, messages of sympathy and floral tributes received during their recent sad bereavement. Special thanks to Rev. C. A. Adey.

The family

My sincere thanks to all the friends who sent me gifts, flowers, letters and cards and those who called to see me while I was a patient in Kingston General Hospital and also a special thanks to the neighbours and friends who were so good to my husband while I was away.

Ruby Hamilton

Grateful thanks are extended to all friends and neighbours for the many acts of kindly aid rendered and expressions of sympathy tendered at the time of the death of the late Arthur McKenzie. We also wish to thank those who sent floral tributes and all who assisted in any way.

Punctuation — Then And Now

Until quite lately I took the punctuation marks which guide our reading pretty much for granted, as something that had always been and always would be. I noted a few deviations. I knew they had once been called points and that another expression for period was full stop. I knew the last century used more commas than we do.

I was aware that the English in their queer way called our quotes, inverted commas, and I knew also that the Spanish put a question mark before, as well as after, the question, inverting the first one, a most sensible procedure which tells you a question is a question when you most want to know it—before you start to read it.

But lately I have been noticing larger things.

The first of these was that punctuation marks are cannibalistic. They feed on each other, making new marks out of old. Take that question mark which the Spanish put before as well as after the question. It's the semicolon used as a question mark in medieval Greek manuscripts, dismembered and reassembled with the period on the bottom and the comma turned around and put on top. The comma itself is a virgule (the slanting stroke you sometimes see between and or thusly — and/or) decapitated and twisted into a curve.

But that's nothing to the jolt I got when I learned that our ancestors used punctuation marks not as we do, to make clear, grammatical structure, but as reading rests to indicate how long the reader should pause at a given place. In the 18th-century "Young Ladies' and Gentlemen's Spelling Book" I came across a table of these rests, here called stops, marks and pauses:

A comma (,) is a pause in reading until you may tell one.

A semicolon (;) two;

A colon (:) three;

A period (.) four.

Thus you read, and still read, for this is the punctuation of the Bible. "The Lord is my Shepherd (count, or tell, two); I shall not want (count four); He maketh me to lie down in green pastures (count three); he leadeth me beside the still waters (count four)."

Webster in his famous spelling book changed the count a bit here. He told our great-grandfathers to count four, not three, for a colon; six, not four, for a period. Being a sensible Nutmeg Yankee, he wanted to slow things down.

This makes punctuation much easier than our modern system—no grammar, no comma splices. All you have to know is how to rest. All you have to do is count.

My next discovery was note of admiration, which I first came upon in the "The New-York Speller," of 1819. Like note of interrogation, for question mark, it had the old wordy formality in it and the Latin which we are getting further and further away from.

Our grannies also played with punctuation. I found three points dramatized in an old rebus which runs like this:

If the B mt put:
If the B. putting:
Don't put: over a der
You'd be an * it.

Translated, this rebus, which once adorned many a sampler and pot-holder, reads thusly:
If the grate be empty, put coal on.
If the grate be full, stop putting coal on.
Don't put coal on over a high fender.

You'd be an ass to risk it. Great-granddads was a busy man, as the song tells us, but he knew a colon from a full stop, a great or capital B from a small one, a hyphen from an asterisk, and he probably knew that the last was Greek for small star, to boot.

But those who come closest to the marks of punctuation are the ones who have the most fun with them—the printers. They have put the melodrama of the exclamation point into several phrases. They call it shriek, as-

tonisher, screamer, scare point, and strike 'em stiff, all image-making terms of high voltage for a mark hated by Swift for its exuberance. In their efforts to season monotony with interest, they call the question mark the wonder mark and parentheses finger nails, thinking of the cuttings, no doubt.

Once you're in it, you find that the story of punctuation, like that of most human interests, is inexhaustible and not without its humor. Like capitalization, it is part of the old-time learnin'-songs which began with Great A and ended with grotesque Izzard and Ampersand:

Great A, little a,
Bouncing B,
The cat's in the cupboard
And she can't see.

If you want any more you can swing it yourself.—By Horace Reynolds in The Christian Science Monitor.

Opening New Roads

Gus had acquired the first automobile to be seen in our parts, a Model "T" Ford touring car with a hand crank, no top, and hard tires. At first, this was piloted by an imported chauffeur—not an elegant fellow, but a mechanically minded youth versed in the ways of this sputtering beast. Then I learned to drive and found high adventure even on the journey from San Antonio to Socorro over the rutted roads designed for wagons. When father himself learned to drive, which he always did with great gusto and very little respect for his car, the chauffeur became a mechanic and Gus opened the first garage in San Antonio.

The Colonel was the first person to drive an automobile over what he named the "skyline route" which followed the wagon road from Magdalena over the Black Range, through Winston, Hermosa, Animas Canyon, Cave Creek Hill, and into Hillsboro—a route which up to that time was used only for horses and wagons. The journey, which father made alone, was a perilous one. When he reached Cave Creek Hill, always a terror for teamsters and horse-drawn vehicles, he was almost forced to give up the trip. Finally, Gus solved the problem of ascent by putting the Ford into reverse and going up the hill backward so that the gasoline would feed from the tank to the engine.

From this and like adventures, father developed a definite concern for the development of proper roads. "These things," he remarked to me sagely, "are going to change the transportation world entirely."

—From "Be My Guest", by Conrad Hilton.

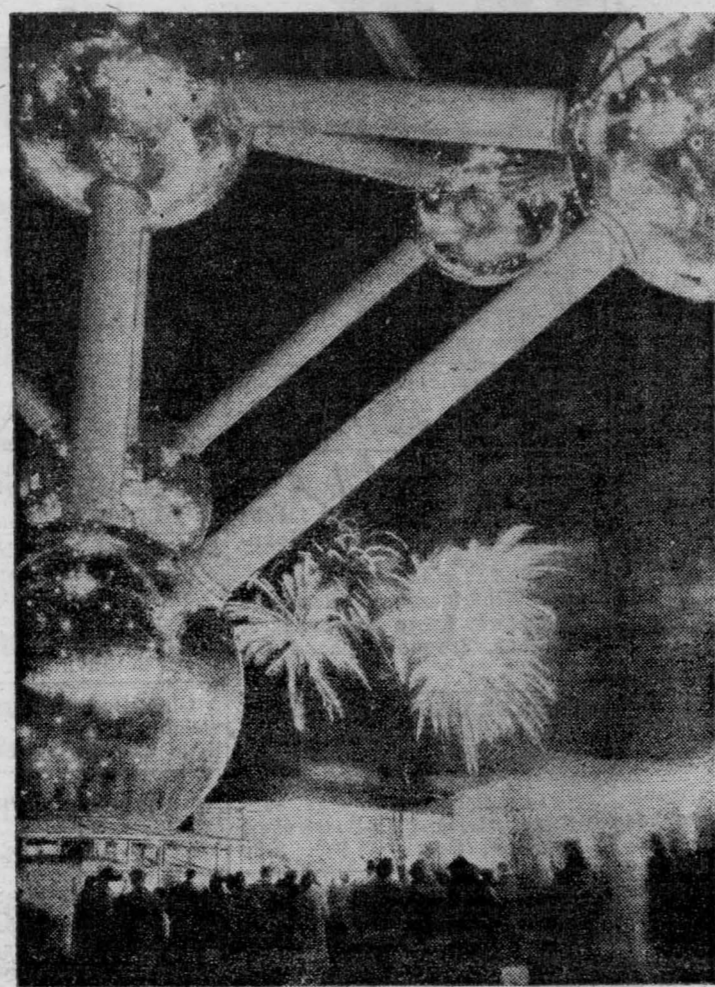

FRIGHTENING—Cathren Santa Maria, a big-eared bosset hound, doesn't like the looks of that hypodermic needle. An antirabies drive brought out the dread instrument.

A finishing school is a place where girls who have any lingering respect for their parents go to have it removed.

ISSUE 22 — 1958

SITTING PRETTY—It took Hugh O'Brian eight years and 30 movies, but he's finally made stardom in "The Hell-Bent Kid". Above, he's sitting pretty with his pretty leading lady, Linda Crystal, who plays his wife.

THE ATOMIUM—Spectators crowd around the Atomium, symbol of the atomic age at the World's Fair in Brussels, Belgium. Representing the basic molecular structure, the Atomium houses a restaurant and exhibition halls in the aluminum spheres. They're connected by a system of escalators.

TABLE TALKS

Jane Andrews.

When you try the following recipe—originally from Europe—please remember that all honey cakes require a few days to ripen and it must also be noted that in the final stages of baking the oven temperature should be lowered because honey cakes scorch very easily.

HONEY CAKE

1 cup honey
6 egg whites
½ cup butter
1 cup brown sugar
6 egg yolks
2½ cups sifted cake flour
2 tsp. baking soda
1 tsp. cinnamon
¼ tsp. salt
½ cup milk

Bring honey to a boil and then cool it. Beat egg whites until stiff.

In another bowl, cream butter and sugar until light, add egg yolks and beat until fluffy, add honey and beat well.

Sift flour, soda, salt and cinnamon twice and add to the mixture alternately with the milk. Fold in stiffly beaten egg whites and pour into greased tube pan.

Bake 45 minutes over 350 F. Reduce heat to 300 F. and bake 15 minutes longer.

Cool cake for a short while before removing from pan. Let ripen 24 hours or longer before serving.

RHUBARB CHIFFON PIE

(Yield — about 8 servings)
1 cup quick-cooking rolled oats
½ cup lightly packed brown sugar
½ cup butter, melted
½ cup cut-up flaked or shredded coconut
3½ cups chopped rhubarb
½ cup water
¼ cup granulated sugar
1 envelope unflavored gelatine
1 pint (1½ cups) whipping cream

Preheat oven to 375 degrees (moderately hot).

Measure rolled oats into a shallow pan and place in preheated oven to toast, 5 to 10 minutes.

Mix in brown sugar, melted butter and coconut.

Pack crumble firmly into bottom and sides of a pie plate (9 inches, top inside measure). Chill until firm.

Prepare rhubarb and place in a saucepan; add ¼ cup of the water and ½ cup of the granulated sugar.

Cover and cook until barely tender — remove ½ cup of the rhubarb pieces.

Cook remaining fruit until tender — 8 to 10 minutes longer. Combine gelatine and the remaining ¼ cup water, add to rhubarb and stir until gelatine is dissolved. Cool until partially set.

Beat whipping cream until stiff; beat in the remaining ¼ cup granulated sugar. Fold in rhubarb mixture and turn into prepared pie shell.

Garnish top of pie with the saved-out partially cooked fruit. Chill until set.

POTATO SCONES

(Yield 16 triangular scones)
¾ cup sour cream
1½ teaspoons salt
2 tablespoons granulated sugar
Few grains ground mace
¼ cup butter
1½ teaspoon baking soda
½ cup cold mashed potato
½ cup lukewarm water
1 teaspoon granulated sugar
1 envelope active dry yeast
3 cups (about) once-sifted all-purpose flour

Sift sour cream; stir in salt, the 2 tablespoons sugar, mace, butter and baking soda.

Mash potato with a fork until very smooth; gradually stir in the sour cream mixture and cool to lukewarm.

Meantime, measure lukewarm water into a large bowl; stir in the 1 teaspoon sugar.

Sprinkle with yeast. Let stand 10 minutes, then stir well.

Stir in lukewarm sour cream mixture and 1½ cups of the flour; beat until smooth and elastic.

Stir in sufficient additional flour to make a soft dough — about 1½ cups more.

Turn out on floured board or canvas and knead until smooth and elastic. Place in a greased bowl. Grease top. Cover. Let rise in a warm place, free from draft, until doubled in bulk — about 1½ hours.

Punch down dough. Turn out on lightly floured board or canvas and knead until smooth.

Divide dough into 4 equal portions. Roll out each portion into a thin round, 9 inches in diameter; dust with flour.

Cut each round into 4 triangular scones.

Place, well apart, on lightly floured cookie sheets. Cover. Let rise in a warm place, free from draft, until doubled in bulk — about 45 minutes.

Bake in a moderately hot oven, 375 degrees, about 15 minutes. Serve hot or reheated.

Portugal's Story

The country which was afterward to be known as Portugal was not discovered by the Romans in the way that the coasts of Africa, India and Brazil were discovered by the Portuguese. The pioneers were Phoenicians and perhaps also Mycenaean Greeks—who had sailed from the back of the Mediterranean out into the Atlantic and up the Portuguese coast, though unlike the later Portuguese in pursuit of pepper, they were in search of tin. Portugal was on the way to Galicia, Brittany, and Cornwall, the places where tin was found—the tin which was alloyed with copper to make bronze; but the voyages were so long that they led to the idea that Lisbon (Ulyssipona) had originally been founded by wise Ulysses, and for that reason an old Spanish writer could say that the Portuguese, whatever else they were, were never stupid.

We may wonder now what geographical reasons could account for the formation of a separate state in the west of the Peninsula. . . . That polygonal mass, shaped roughly like a pentagon—so clearly separated from the rest of Europe by the Pyrenees and so narrowly cut off from Africa by the Straits of Gibraltar—seems geologically formed for unity.

Considered more closely, the judgment is shown to be superficial. Even a tidy-minded civil servant like Philip II found it unworkable; and when it came to practical administration the Romans were right: Hispania was not one province, but several. Only worldly adventurers or unworried theologians could hope to govern the coastal regions—whether level plains or tumbled mountains—from the fortress of the central plateau. The population of fishermen and sailors were too unlike the migratory shepherds up above.

The Peninsula is slightly tilted toward the west; there is no more room; the slopes are more gradual than they are in the Basque or Catalan country. . . . As a rule, maritime peoples begin by fishing and exchanging fish; then they take to the coasting trade, and exchange fish and salt for other products with other peoples. This is what happened in Portugal. But Portugal was in the beginning, and remained to the end of the fifteenth century, one vast forest, broken here and there by small

Studied Evenings To Learn Forgery

Counterfeiters are queer people. Melvin G. Parsons, a fifty-seven-year-old foundry moulder of Missouri, laid on his own "evening classes." He studied engraving, inks and printing at a public library for hundreds of evenings, then in three years forged \$14,000 worth of perfect \$10 bills, but gave them such painstaking care and costly finishes that he barely met expenses.

"I didn't make any money out of it," he told a secret service agent, "but like horse-racing it gets in your blood, and I couldn't get away from it." The agent said: "He was trying to produce better money than the Treasury Department."

One U.S. counterfeiter was a Roman Catholic who victimized only priests of his church. Pious, penitent, he wandered around the country offering \$50 and \$100 bills for special prayers of which, he said, he was in great need.

The priests readily took his notes and gave him change, and the notes stayed in circulation longer than usual because the churches had no difficulty in passing them!

One counterfeiter was a Louisiana justice of the peace who, in 1908, set up an efficient plant in an unused room of his court. Culprits paying fines were lectured sternly on their misdeeds—and given counterfeit change!

In a fascinating account of some of the world's most notorious cases—"Money of Their Own"—Murray Teigh Bloom says that a few forgers do escape despite a U.S. Secret Service estimate that at least ninety per cent are caught and sentenced.

The half-rouble notes of a Russian gang, in 1912, were excellent reproductions, except that on one side, in tiny characters, was this challenge to the Tsar's treasury: "Our money is no worse than yours."

A Milanese counterfeiter, in 1951, turned out fairly good U.S. \$10 notes, but in the usual promise on the face, "Redeemable in lawful money," the engraver deliberately omitted the first "I" from "lawful!"

The \$100 notes of the Ramirez brothers of Mexico were only fair technically, and probably wouldn't have passed any sober bank cashier. They were intended only for use by bootleggers, to pay off suppliers beyond the three-mile limit—and on a pitching boat on a moonless night they always passed. Later, when they were found to be fake, how could the supplier complain, and to whom?

But in time some of the wiser ones hired bank tellers for a week-end's work at sea, checking the pay-off money.

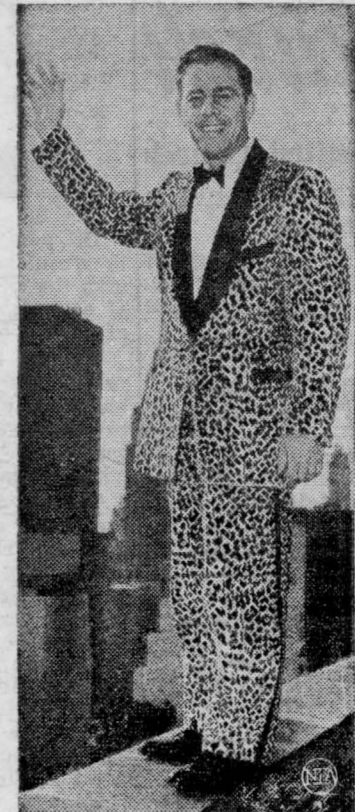

Marcus Crahan, a Providence, U.S., photo-engraver, disposed of most of his home-made notes at race tracks around the country. As soon as he reached a city he put a personal notice in a leading paper on these lines: "Found in Union Station late yesterday afternoon, a sum of money in bank-notes, which owner may have, after proving property, by applying to X-13 this paper."

Thus, when he was eventually caught, he could say he found the fake notes, instead of making the lame excuse that he got them from bank or store. Once or twice this succeeded, but the third time it landed him a fifteen-year sentence.

Edward Windeyer, ex-fisherman, ex-mechanic, ex-watch-

country towns and villages surrounded by strips of cultivation. A little clearing here, and you could pasture sheep and goats; another clearing, and you could grow cereals of some sort, rye, oats, or millet, to be ground in hand-mills by women, like the women forever grinding maize in Mexico to make tortillas.

—From "Portugal", by J. B. Trend.

EASY TO SPOT—His friends never have a hard time spotting Rudy Turilli when he steps out for the evening in his leopard-skin tuxedo. Turilli, manager of the Meramec Caverns, gets a good view of New York from a roof garden 28 floors up. He was in New York to hire models to act as guides at the cave.

maker living in a suburb of Sydney, Australia, made this do-it-yourself confession recently: "I thought I would have a go at making some £10 notes. I went to the library and to the bookshop and read about printing and engraving for six months, then I bought some ammonium bichromate, gum arabic, pumice powder, some nitric acid, and other things. I also got some sheet zinc and tubes of water colours and some typing paper, photographic film . . ." and so on.

He passed 350 of his notes at night trotting races and greyhound meetings, and was dubbed by the newspapers "Mr. One by One" because he was careful never to pass more than three or four in a day.

To avoid having to carry the notes about until he really needed them, he mailed himself letters in the different cities he visited. After he was caught and given seven years' hard labour in 1953, the detective inspector on the case said:

"This man's work, developed in a few months from an almost complete lack of photography knowledge, shows what can be done if one has the determination."

Taxis Of Death

A New York taxi was recently taking a man and a woman to a police station. When the taxi arrived, astonished police officers found both passengers dead. The man had a pistol and a command knife in his belt, and a bullet in his head; the woman, his wife, had died of bullet wounds in the head and neck.

Another tragic taxi was that taken by a woman to Beachy Head last autumn. On arrival she told the driver to wait for her, but she never came back. They found her body on a ledge 500 feet below.

Remember the "Cleft Chin" murder, when an American soldier and a British woman were sentenced in January, 1945, for murdering and robbing a London taxi driver?

After they had been sentenced and removed from court, the judge told the jury that the same pair had some time previously held up another taxi. But on that occasion the passenger was an American officer who promptly drew his revolver and the couple fled.

It's How We Live That Counts

At least one-third of all man's illnesses, from the common cold to cancer, may now be traced scientifically to the patient's environment and how well he adapts to it.

This concept of disease was presented by Dr. Lawrence E. Hinkle Jr. of New York at a meeting of the American College of Physicians in Atlantic City, N.J. Its basis was a seven-year Cornell Medical Centre study covering some 3,000 persons (American working men and women, Chinese graduate students, American college graduates, and Hungarian refugees). In each of these contrasting groups, said Dr. Hinkle, was found the same sickness pattern: 25 per cent of the men and women studied accounted for 50 per cent of the total illness for each group.

The great majority of the disease incidents came in "clusters," Dr. Hinkle said, at times when the members of every group found their life situations and environments "threatening, unsatisfying, over-demanding, productive of conflict . . . against which conditions they could make no satisfactory adaptation." In general, the conditions involved "disturbed relations with family members or business associates, threats to security and status, and restrictions and limitations which made it impossible for them to satisfy important needs and desires."

The disease episodes were not minor. They ran the gamut of "major, irreversible, life-endangering illnesses." About 50 to 60 per cent were upper-respiratory disease; 20 per cent affected the gastrointestinal tract. But any body function regulated by the central nervous system might be influenced by the patient's unfavorable reaction to environment, Dr. Hinkle suggested.

In some cases, changes of environment and of unsatisfactory life situations might help. But in the end, Dr. Hinkle thinks, it is the patient's ability to adjust to his situation that will best combat disease. "Ultimately," he said, "medicine will have to take account of this in the treatment of illness. In view of the complexities involved . . . these efforts will be difficult, time-consuming, and not at first highly rewarding. Nevertheless, the problem of the patient's relation to his environment stands before us as a stern challenge to medicine, and not as an easy opportunity." —From NEWSWEEK.

MICKY'S MANTLE

Though far from immodest, Mickey Mantle isn't exactly unaware — or proud — of his ability to hit a ball a country mile. In the eighth inning of a spring practice game against the Tigers, Mickey rapped one over the rightfield wall that must have gone 470 feet on the fly. The ball took off and just went and went.

After the game, Mickey got dressed and took a seat in the team bus next to a window. Just then a kid ran up with a ball for him to autograph.

"It's the ball you hit for that homer, Mickey," explained the kid.

"It can't be," said Mantle.

"Why can't it be?" asked the indignant youngster.

"Because you couldn't bring it back so quick!" grinned Mickey.

MERRY MENAGERIE

PRINCE

"He's sure taking that name seriously!"

Dates and Prunes Are Sure-Fire Dessert Hits

BY DOROTHY MADDOX

Like dates and prunes in desserts? If you do, you'll enjoy these two very good recipes.

Date-Brownie Pudding

(8-10 servings)

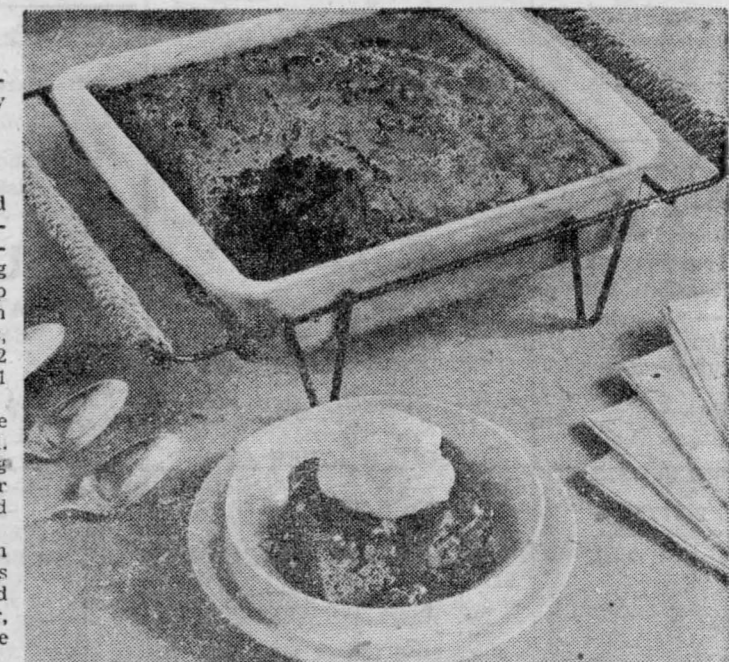

Three squares unsweetened chocolate, 2 tablespoons shortening, 1 cup sifted flour, 2 teaspoons double-acting baking powder, 1 teaspoon salt, ½ cup sugar, 2½ cups milk, 1 teaspoon vanilla, ½ cup chopped dates, ½ cup chopped nut meats, 2 cups water, 1½ cups sugar, 1 square unsweetened chocolate. Melt 3 squares of chocolate and shortening together. Cool. Sift flour, measure, add baking powder, salt, and ½ cup sugar and sift again. Add milk and vanilla.

Mix until smooth. Stir in cooled chocolate mixture, dates and nuts. Pour into greased 8x8x2-inch pan. Combine water, 1½ cups sugar and 1 square chocolate in saucepan.

Place over medium heat and stir until sugar is dissolved and chocolate is melted. Bring to a boil. Pour over top of batter. (This makes a chocolate sauce in bottom of pan after pudding is baked.) Bake in moderate oven (350 degrees F.) 40 to 45 minutes.

California Vineyard Pie

(1 9-inch pie)
One and one-half cups cooked prunes, ¼ cup port or sherry

Whipped cream tops this delicious date-brownie pudding. Look good? It is, and easy to make, too!

wine or water, ¼ cup orange juice, 1 teaspoon grated orange rind, 2 tablespoons lemon juice, ½ cup prune cooking liquid, ½ cup sugar, 1 tablespoon butter or margarine, 2 tablespoons cornstarch, 2 tablespoons cold water, pastry for 9-inch crust and strip top.

Pit prunes and cut in halves. Arrange in a pastry-lined pie pan. Combine wine, orange juice and rind, lemon juice, prune liquid, sugar and butter and heat to boiling. Add cornstarch mixed with water and cook and stir until mixture boils and is thick. Pour over the prunes. Cover pie with strips of pastry. Bake about 25 minutes in a hot oven (425 degrees F.).

Rockweed Harvest

Cousin Herman was the only Friend's Corner farmer who harvested rockweed. Father and Uncle Arthur recognized its fertilizer value but they had little liking for the noxious task of gathering and stacking the seaweed fungus.

We children did not share our elders' dislike of the rockweed harvest and we were usually on hand to help Cousin Herman with his annual fall task. The date of the harvest was always uncertain because we had to wait until the southerly gales of September and October had torn the rockweed from the offshore islands and deposited it along the rocky beach. The morning selected had to be one of low tide.

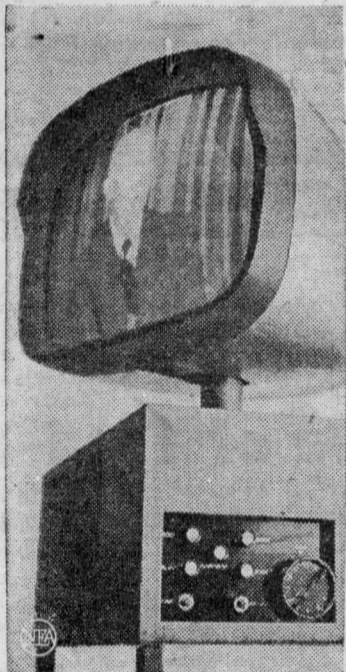

On some October Saturday, Cousin Herman was sure to say, "This is the day." We young folks rallied to the curt summons. Austin and my brothers eagerly volunteered their assistance because they anticipated the pleasure of taking turns in driving Star and Bright, the tawny red oxen. Each of the three boys knew equally well the use of "Gee" and "Haw," signals that were called to guide the beasts to the right and left. They were equally skilled in swinging the goad stick. But they were not equally successful in handling Star and Bright.

Austin was too quick in the giving of directions and the use of the stick. His father always said with a sign, "You will never make a teamster." Ben laughed and talked and frequently sang when he guided the oxen. His high spirits had an upsetting effect upon his charges, who started to swing their great heads uneasily. Their owner was quick to take the goad from Ben and place it in the steady hands of my older brother, who, according to Aunt Hannah, was a "born Friend." Otis' quiet steadiness was sure to calm the oxen.

Olive and Alice and I joined the harvesting party with no expectation of being allowed to drive the oxen. In fact, we preferred to be behind the great beasts rather than beside them. We found the ride in the two-wheeled cart pleasurable as the oxen followed the winding meadow road from barnyard to seashore.

Though we girls were familiar with the routine of the rockweed harvest, we enjoyed watching the work for a few minutes. Star and Bright, their nostrils covered with nose-baskets lest they turn to feeding, were guided along the irregular margin of the field by Otis. Cousin Herman took the laborious task of gathering up the seaweed with a pitchfork and tossing it to a pile on the meadow fringe above the beach. Ben and Austin piled the wet, salty weeds onto the cart. The oxen drew the loaded cart to the rocky point at the end of the meadow. There the rockweed was stacked in small piles to be bleached and rinsed of salt by the fall rains and the winter snows.

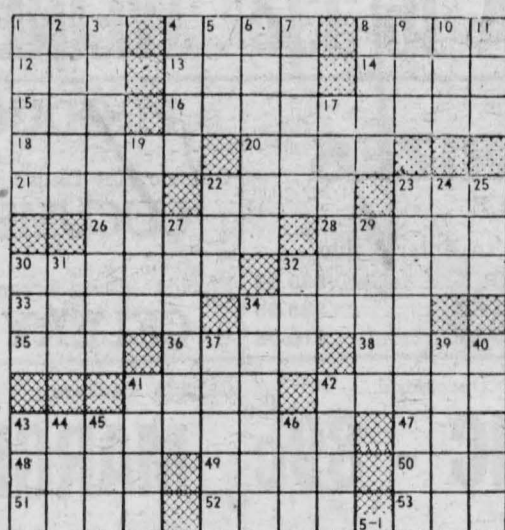

Some years the supply of loose

Answer elsewhere on this page

seaweed on the shore was not sufficient for my cousin's needs. Then he took a short-bladed scythe and cut the rockweed from the ledges. This process we watched with interest and admiration. His successful cutting of the weed in its rocky bed evidenced his skill as a hand mow-er.

The rugged shore yielded a harvest other than that of rockweed. It was that harvest which we girls gathered. We had each brought along a tin can, one in which had come cocoa shells, the source of a favorite breakfast beverage. We walked the beach in search of mollusk shells, the white-domed covering of the whelk, the Tyrian-tinted periwinkle shells, and the fluted valves of the scallops. We collected these from no interest in natural history. We garnered them as potential playthings that would provide entertainment during winter afternoons and evenings. They were useful in counting games. They became wampum when we "played Indian." We used them to trace floral and geometric designs on the carpet and the floor. Our imaginations were always finding new uses to which the shells could be placed, writes Esther E. Wood in The Christian Science Monitor.

Once our cans were filled with shells, we turned to other attractions of the shore. We removed our shoes and stockings, left the rock-covered beach, and walked out onto the muddy flats, where we drew faces and figures with pointed sticks. When the turning tide warned us off the flat, we hunted driftwood on the upper beach and delighted to find an occasional dandelion or lobster trap thrown there by some flood-tide.

When dinner time came, the seven harvesters were glad of the cart ride home. Alice, Olive, and I carried our harvest in our arms but the others left their harvest in several dozen little mounds in the lower meadow. Nor was the work of the rockweed harvest completed. Cousin Herman later mixed barn manure and plant foliage with the rockweed. As long as the material remained unfrozen, it was pitched over every few days so that the plants would be well mixed and equally exposed to the cleansing rains.

May was the month that saw the final disposal of the rockweed. Cousin Herman had the same crew that he had had in October. But in the spring, Shep and Don-dog went along because they loved a run in the green field, where they mined for woodchuck runs. Again, the boys took turns in driving the oxen; again, Otis was given the longest turn. This time, the four workers shared the work equally. They loaded the cart with compost, which they later spread on the field and the plowed piece, where the turnips and the other root vegetables were to be planted.

In May, we girls had no interest in a harvest of shells. We found attraction in the meadow rather than on the shore. We scouted the field for wild strawberry blossoms so that when July came we would be able to find the fragrant red berries. We followed the meadow brook in search of the bright-flowered marsh marigolds, whose leaves we gathered for greens. We walked along the edge of the meadow to inspect the bulging buds of the wild apple trees.

As Cousin Herman and his helpers spread the compost, they talked of the weather, the smelting season, and the news of neighborhood and village. But before the task of spreading was completed, one of the workers was sure to say, "There should be a good yield of hay in this meadow. One harvest that always pays is the rockweed harvest."

ONE MAN'S MEAT

Aldo Venco, a butcher in Rome, was suspicious of the customer who complained that the meat recently sold to him was bad.

The only meat that was tainted had been put aside as being unfit for human consumption by the butcher a few days earlier. While waiting for disposal, a thief had entered the premises and stolen the meat.

The customer, Santo Furiato, was duly arrested for theft.

NO HOME FOR US CHICKENS—Hundreds of chickens find themselves homeless after a tornado ripped down their coop. The twister tore across the south Texas town, doing approximately \$65,000 damage.

THE FARM FRONT

by John Russell

Canadian hog producers marketed 2,248,000 grade B1 hogs through inspected packing plants in 1957. This was 41 per cent of the total of 5,400,000 hogs marketed through these plants.

Had the B1 hogs graded as A's, they would have brought \$5,623,000 more to the farmers who raised them—\$1.00 more per hog in government premiums and \$1.50 more per hog as the average difference in price paid by the processors for Grade A over Grade B1 hogs.

The 2 1/4 million hogs that sold as Grade B1 instead of Grade A did so for several reasons—too fat, too thin, off type, faulty shoulder, loins or hams, too rough, or showing color pigment in the skin; or a combination of two or more such faults.

Of all these reasons for the lower grade, however, "Too Fat" was by far the major fault. Out of the nearly 2 1/4 million carcasses graded B1, over 54 per cent, or about 1,219,000 carcasses did so only because they carried too much fat. They were within the weight limits required for grade A, were of the right type, sufficiently smooth, showed no pigment in the skin, and were good enough in the shoulder loin and ham to have graded as A's, just too much fat—fat that had to be trimmed off, where possible, and sold as lard at 15 to 20 cents a pound, instead of as bacon, ham or fresh pork at from 45 to 80 cents a pound.

The old argument, that marketing hogs too heavy to qualify for the top grade still provides a market for grain that cannot be sold for as much elsewhere, does not apply in this case since those B1 hogs were within or close to the A grade weights. It was the high proportion of fat to lean meat that largely determined the grade of the hogs, rather than weight of the carcasses.

The year's grading records show that over 70 per cent of the hogs graded in Canada in 1957 were within the weight range of grade A (140 to 170 lb.). Less than 4 per cent graded "heavy" and "extra heavy."

It is evident that hog producers generally are not feeding their hogs to over-weight just to find a market for grain. But it is equally evident that the breeding stock used, or the feeding methods followed, or a combination of the two, are not producing the type of market hog that has the proportion of lean meat to fat required to provide a large percentage of top or A grade carcasses, although they are marketed within the required weight range. More lean meat hogs are required in the food market places if pork products are to retain consumer acceptance in the face of strong competition from beef and poultry products.

Although Safflower has been grown since ancient times in India and the Middle East as an edible oil crop, it is Canada's newest oilseed crop. It came to commercial production in Southern Alberta in 1957. In the United States this crop has grown to over 100,000 acres in the past 10 years. The oil from safflower is marketed for industrial purposes and with Canada so deficient in edible oils it is possible that safflower would serve best by filling a part of this country's domestic requirements.

Though safflower has reached commercial production, many problems remain for the agronomist and the plant breeder to overcome. These problems if not solved may well endanger the prospects of this crop in Canada. Safflower is a hardy plant and has done well under dryland farming, and on irrigated land

However, farmers may find that under certain weather conditions the seed does not fill out properly. This is thought to be due to too much moisture at blossoming time. Studies are underway to learn more about this characteristic and to select lines which might tolerate higher humidity.

Safflower must be seeded early even in the southern areas, because it requires a long season to mature. It has about the same frost resistance as barley and therefore is not endangered by early seeding. Particular attention is being given to the selection of lines which are early in maturity.

The safflower plant is subject to several diseases but so far these have been of minor importance. Commercial varieties are susceptible to rust but rust resistant types are known and are being used in the breeding program. Root rots frequently have done considerable damage on irrigated land particularly in some varieties. Selection is underway to increase the resistance to root rots and also leaf diseases which are found more frequently in some locations than others and in certain seasons.

Safflower is grown for the oil contained in the seed. Particular attention is being given in the breeding program to those selections which are higher in oil content. In making yield comparisons with other oilseed crops, it is important to take into ac-

count the fact that safflower seed has 35 to 50 per cent hull. If safflower is to find a place among the oilseed crops in Canada it will have to maintain its rank on the basis of oil returns per acre.

Thousands Fight Over Fortune

If you are rich and want to cause trouble when you go don't bother to make a will!

Not long ago Miss Fannie Moffitt died in Altamont, Tennessee, U.S.A., leaving a fortune of over a million dollars. Ignoring her lawyer's advice, she would not make a will. "Let 'em fight for it!" she said cynically, and at once sixty-two distant relations made lawyers prosperous by laying claim to her money. But their trouble was nothing compared with the chaos resulting when Mrs. Henrietta Garrett, widow of a Philadelphia snuff manufacturer, died in 1931 without leaving a will for property involving an estate valued at over twelve millions. As she had neither brothers, sisters nor children, and her husband's relatives were ruled ineligible by the courts, everyone with the remotest chance of getting a share went to law.

Within a few weeks 26,000 people in forty-six states in America and twenty-nine foreign countries joined in the scramble for her millions. In some cases they formed syndicates to save expense. But eventually about half of them were ruled out.

For the next twenty-three years the rest kept the Philadelphia courts busy until, in 1954, Judge Klein announced that he would give judgment. Armed with a loaded revolver because he had been "subjected to such abuse by neurotics and unreasonable people motivated by greed," he stated that three people were entitled to share the fortune.

Sometimes people leave money so that it cannot be distributed

as they direct. About seven years ago Panos Politis, a Greek, died in New York, after appointing a committee of six to find each year "four wholly destitute virgins" on his native island of Lefkas, Greece.

Each girl was to receive \$5,000 but, after investigation, the executors stated that it would cause "bitter local dissension and contention."

The courts therefore decided to award the money to hospitals and poor people on Lefkas.

For some inexplicable reason a doctor in the South of France left a prize to be awarded annually to the native of Nice, man or woman, with red hair, black eyebrows, straight nose and the smallest wrists and largest hands. That provision was cancelled when a judge said that such a person was "practically impossible."

Now and again people make bequests which, apparently generous enough, would be nuisances to the people for whom they were intended. In January, 1955, one rich American left his nephew two islands off the coast of Portugal. The young man was naturally delighted with his good fortune—until he learned that as a condition of his inheritance, he would have to give up his promising career as an actor and live on his islands. He refused to accept his uncle's bequest.

Red-faced Cops

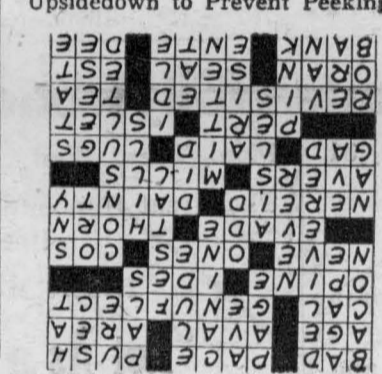

Two alert police constables in a patrol car in Johannesburg saw a suspicious character sneaking from his home soon after midnight with a heavy bag over his shoulder. From the man's furtive actions they were convinced that he had committed some horrible crime and was now trying to hush it up.

They shadowed him eight miles to a gold mine dump and watched with increasing excitement as they saw him dig a hole, bury the bag and then carefully obliterate his tracks.

As he stepped up to his car the constables poked revolvers under his nose and forced him to return to the scene of his crime. There they made him dig up the bag despite his violent protests. With handcuffs ready and the revolver trained on the man, who was almost in tears, the constables made him open the bag—and found the body of an old dog.

"He was killed by a car this afternoon," the man explained, "and I had to get him away without the children knowing about it. They loved the old dog and I was simply going to say that he had run away." The red-faced constables hurried off.

The SUNDAY SCHOOL LESSON

By Rev. R. B. Warren, B.A., B.D.

Leadership Requires Character
Numbers 27:18-20
Joshua 1:1-9.

Memory Selection: Be strong and of a good courage; be not afraid, neither be thou dismayed: for the Lord thy God is with thee whithersoever thou goest. Joshua 1:9.

No two leaders are alike, yet all leaders have some traits in common. Let us consider Moses who led Israel for forty years and his successor Joshua.

Both had the conviction that they were called of God to the role of leadership. When Moses rejected adoption as the son of Pharaoh's daughter and turned to the interests of his people "he supposed his brethren would have understood how that God by his hand would deliver them: but they understood not." (Acts 7:23.) Forty years later, at the burning bush, the call of God became imperative.

For forty years Joshua was aide-de-camp to Moses. He led in the defense of Israel against Amalek. He only, went with Moses into Mt. Sinai when he received the law. As leader of the tribe of Ephraim he was one of the twelve to spy out the land. He was prepared to accept appointment on the eve of Moses' death. Great leaders need to feel that they are men of destiny. They can't inspire confidence unless they have confidence in themselves.

Leaders must have courage. Moses possessed it or he would not have ventured on a task which from all human standards was impossible. Joshua showed his courage in joining with Caleb in presenting a minority report of hope when they returned from spying out the land. We see his courage in leading in the conquest of the land.

Leaders need a good preparation. Moses as a baby, had godly training. In youth he learned all the wisdom of the Egyptians. He learned from his mistake in presumptuously slaying the Egyptian. In forty years of tending sheep he learned in patience how to watch, guide, guard, heal and feed. This training proved invaluable in preparing to exercise these same functions over the Children of Israel. Joshua learned much from his intimate association with Moses.

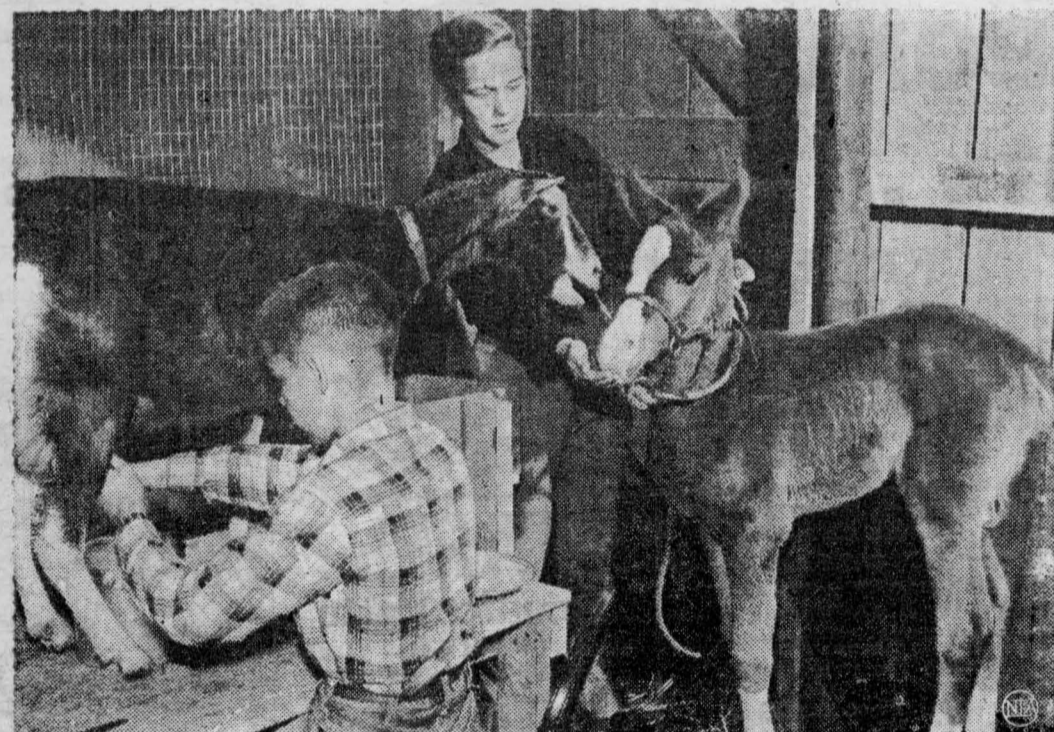

Faith in God was absolutely necessary for Moses and Joshua. It is necessary today, also, for every leader in church or state, who will do a good job of leading men in these troublesome times. People are uneasy. Leaders who know God can do much to give strength and hope to the people.

MALAPROP-UP

Boots Poffenberger was another of those ball players who had trouble with his adjectives and pronouns. Fielding a bunt one day, he suddenly pulled up lame. Hobbling off the field, he announced, "I think I've pulled a tenement."

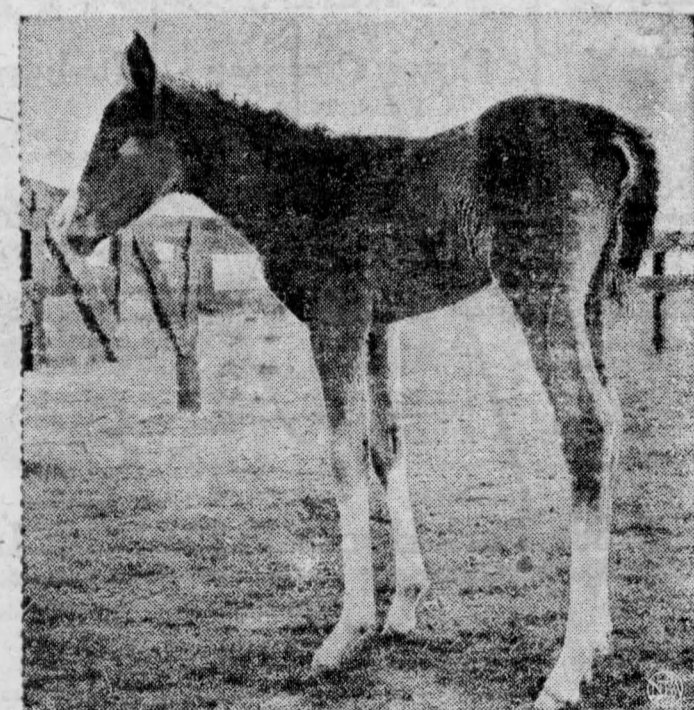

ISSUE 22 — 1958

Long-Legged Arabian Orphan Winning Her Fight for Survival

Nanny goat supplies milk for special formula—goat's milk, lime water and sugar.

Orphaned at birth, Esmiya, one of only a handful of purebred Arabians ever born in Missouri, is waging a strong battle for life on the farm of Dr. and Mrs. T. E. Atkinson Jr., in Springfield. The filly, 16 days old in the picture above, lost her dam within 24 hours due to foaling complications. The combination of energy, love and determination exhibited by Dr. Atkinson, his wife and sons, Steven and Lance, plus the colt's complete surrender of her life and future to them give the Arabian a better-than-fighting chance for survival. The Atkinson's, who dearly love their Arabians, couldn't find anything in the "book" on how to nurse Esmiya. Using Dr. Atkinson's medical experience, plain "horse sense", and the loan of a nanny goat, the foal was offered a bottle of formula. But, thank you, she would not nurse the bottle. Esmiya grew weak so in desperation Mrs. Atkinson pushed the colt's nose into a pan of the formula. Once she got a taste, that was it. Now Esmiya takes 18 ounces every three hours. The colt, one of about 9,000 Arabians in the U.S., has adopted Mrs. Atkinson as her "mother." Mrs. Atkinson is shown with Esmiya, left photo, as Steven milks the goat. Arabians are the common ancestor of such breeds as Quarter Horses, Thoroughbreds and Morgans.

Safe in corral, Esmiya appears to be contemplating the future.

DUNDAS COUNTY DAIRY PRINCESS COMPETITION

Open to young ladies 17 to 26 by August 20th. Prizes to all contestants. County winner to compete for title of Ontario Dairy Queen and all expense trip to United Kingdom.

THE HYDRO-ELECTRIC POWER COMMISSION OF ONTARIO

NOTICE OF EXPROPRIATION BY THE HYDRO-ELECTRIC POWER COMMISSION OF ONTARIO of lands in the Townships of Williamsburg and Matilda, both in the County of Dundas.

PLEASE TAKE NOTICE THAT THE HYDRO-ELECTRIC POWER COMMISSION OF ONTARIO under The St. Lawrence Development Act 1952 (No. 2), and all other powers thereto it enabling has for its purposes TAKEN AND EXPROPRIATED in fee simple lands in the Townships of Williamsburg and Matilda, both in the County of Dundas, in the Province of Ontario, more particularly described in Schedule "A" hereto and HAS DEPOSITED a plan and description of the said lands in the Registry Office for the Registry Division of the County of Dundas on the SIXTEENTH day of April, 1958.

TO be used for the construction, maintenance and operation of the works to develop and utilize the power resources of the International Rapids section of the St. Lawrence River.

AND FURTHER TAKE NOTICE that every person having any claim to compensation must file the same with The Hydro-Electric Power Commission of Ontario at 620 University Avenue, Toronto, Ontario, within six months of the receipt of this notice, giving particulars of any claim that he may have in respect of this expropriation.

DATED at Toronto this 28th day of April, 1958.

THE HYDRO-ELECTRIC POWER COMMISSION OF ONTARIO

H. E. McLEAN, Acting Secretary

SCHEDULE "A"

ALL THOSE PORTIONS OF Lot 37, and the West Commons Lot, Concession I, in the Township of Williamsburg, and part of the East Commons Lot, Concession I, in the Township of Matilda, all in the County of Dundas, in the Province of Ontario, more particularly described as follows:

FIRSTLY: being part of the said East Commons, West Commons and Lot 37;

COMMENCING at the Northeast angle of said Lot 37; THENCE South 30 degrees 10 minutes and 30 seconds East along the Eastern limit of Lot 37 aforesaid 2177.95 feet;

THENCE South 58 degrees 24 minutes and 30 seconds West 1565.24 feet to the Eastern limit of a travelled road;

THENCE North 27 degrees and 55 minutes West along said Eastern limit 1890.77 feet to the Northern limit of the said East Commons Lot;

THENCE North 59 degrees and 28 minutes East along said Northern limit 294.46 feet to the Northeast angle of the said East Commons Lot;

THENCE North 27 degrees 51 minutes and 30 seconds West along the Western limit of said Lot 37 a distance of 40.04 feet;

THENCE North 30 degrees and 01 minutes West still along said Western limit 299.59 feet to the Northwest angle of said Lot 37;

THENCE North 60 degrees and 25 minutes East along said Northern limit 325.99 feet;

THENCE North 59 degrees and 55 minutes East still along said Northern limit 640.58 feet;

THENCE North 62 degrees 15 minutes and 30 seconds East 227.14 feet, more or less, to the point of commencement.

SAVING AND EXCEPTING thereout and therefrom all that portion of the lands of The Department of Highways Ontario, described in Instrument No. 17859 included in the above described lands.

SECONDLY: being part of the said East Commons, West Commons and Lot 37;

COMMENCING at a point in the Eastern limit of said Lot 37, distant 2302.99 feet, measured South 30 degrees 10 minutes and 30 seconds East along said Eastern limit from the Northeast angle of Lot 37 aforesaid;

THENCE South 30 degrees and 16 minutes East still along said Eastern limit 4837.46 feet to the Northern limit of the lands of The Canadian National Railways;

THENCE South 60 degrees and 46 minutes West along said Northern limit 1277.56 feet;

THENCE North 32 degrees and 47 minutes East still along said Northern limit 10.02 feet;

THENCE South 60 degrees and 46 minutes West still along said Northern limit 200.43 feet;

THENCE South 60 degrees 45 minutes and 30 seconds West still along said Northern limit 292.66 feet to the Eastern limit of a travelled road;

THENCE Northerly along said Eastern limit to a point distant 10 feet measured Northerly from and at right angles to the aforesaid Northern limit of the lands of The Canadian National Railways;

THENCE North 60 degrees 45 minutes and 30 seconds East 45 minutes and 30 seconds East 292.59 feet;

THENCE North 60 degrees and 46 minutes East 661.19 feet;

THENCE North 30 degrees 19 minutes and 30 seconds West to the Southern limit of the lands of The Hydro-Electric Power Commission of Ontario described in Instrument No. 17872;

THENCE North 58 degrees 24 minutes and 30 seconds East along said Southern limit 821.94 feet, more or less, to the point of commencement.

THIRDLY: part of said Lot 37; COMMENCING at a point in the Eastern limit of said Lot 37 where it is intersected by the Southern limit of the lands of The Canadian National Railways, distant 4927.47 feet, measured South 30 degrees and 16 minutes East along said Eastern limit from a point which said point is distant 2302.99 feet,

measured South 30 degrees 10 minutes and 30 seconds East along said Eastern limit from the Northeast angle of Lot 37 aforesaid;

THENCE South 30 degrees and 16 minutes East still along said Eastern limit 2541.14 feet to the Northern limit of the lands of The Hydro-Electric Power Commission of Ontario as described in Instrument No. 18064;

THENCE Westerly along said Northern limit on a curve to the right having a radius of 904.93 feet, the chord of which has a bearing of South 85 degrees 34 minutes and 30 seconds West and a length of 409.61 feet, an arc distant of 413.19 feet;

THENCE North 31 degrees and 21 minutes West still along said Northern limit 581.60 feet;

THENCE North 30 degrees and 06 minutes West 2001.45 feet;

THENCE North 29 degrees and 06 minutes West 10.00 feet to the aforesaid Southern limit of the lands of The Canadian National Railways;

THENCE North 60 degrees and 46 minutes East along said Southern limit 816.71 feet, more or less, to the point of commencement.

SAVING AND EXCEPTING thereout and therefrom all of the Methodist Cemetery described in Instrument No. 10035 included in the above described lands;

FOURTHLY: part of said Lot 37;

COMMENCING at a point in the interior of said Lot 37, being also in the Southern limit of the lands of The Hydro-Electric Power Commission of Ontario described in Instrument No. 18064, which point may be located as follows:

BEGINNING at the Northwest angle of said Lot 37;

THENCE South 30 degrees and 01 minutes East along the Western limit of the Township of Williamsburg 299.39 feet;

THENCE South 27 degrees 51 minutes and 30 seconds East still along said Western limit 8610.83 feet to the aforesaid Southern limit of the lands of The Hydro-Electric Power Commission of Ontario;

THENCE North 87 degrees and 10 minutes East along said Southern limit 188.13 feet;

THENCE Easterly on a curve to the right having a radius of 2814.79 feet, the chord of which has a bearing of South 87 degrees 05 minutes and 30 seconds East and a length of 563.23 feet, an arc distance of 564.23 feet to a point hereinafter referred to as Point "A";

THENCE South 81 degrees and 21 minutes East still along said Southern limit 119.37 feet to the said point of commencement;

THENCE South 81 degrees and 21 minutes East still along said Southern limit 44.07 feet;

THENCE South 61 degrees 33 minutes and 30 seconds West 34.38 feet;

THENCE North 30 degrees and 06 minutes West 26.59 feet, more or less, to the point of commencement.

FIFTHLY: part of the said East Commons and West Commons Lots and Lot 37;

COMMENCING at a point in the interior of said Lot 37, being also in the Southern limit of the lands of The Hydro-Electric Power Commission of Ontario described in Instrument No. 18064, distant 353.28 feet, measured South 81 degrees and 21 minutes East along said South-
