JAS. CURRIE - CRYSLER

Bad Roads and Traffic Heavy

Country roads during the past week or ten days have been about as bad as they well could be throughout this section. The traffic on them is particularly heavy, especially leading towards Chesterville. An idea of just how heavy it is may be had from the fact that during sixty minutes, on Thursday morning last, without any special reason for it, sixty rigs passed between the McCloskey House and the bridge representing the traffic coming from the south side alone.

The Small Boy And The .22 Rifle.

The season of the year has arrived when the small boy with the 22 calibre rifle becomes a positive danger to life and property throughout the country. The season never goes round without the loss of life from the careless handling of the small-bore rifle, to say nothing of the distruction of the agriculturalists' best friends, the insect eating birds. We believe it is against the law for young lads to carry these guns, while anyone is liable to prosecution for killing insectivorous birds.

T. W. Lambert Appointed Constable

At the last meeting of the Village Council Mr. T. W. Lambeft was appointed constable and given special instructions to give his attention to the stopping of several undesirable practices which have for sometime been earning an unsavory name for town. One is the alleged gambling said to be indulged in by youths of tender years in a place where they have been in the habit of congregating and another the frequenting of the pool rooms by boys under the age limit. Exceeding the speed limit by autoists and others will also be brought under control and would be well for all to bear in mind when they are hitting only the high spots they are apt to be invited to explain their hurry to the Magistrate.

Five Patrols of Girl Guides

That the Girl Guide Movement in Chesterville is heartily endorsed by the mothers of the girls and by others interested in their welfare was amply demonstrated by the well attended meeting in the High School last week. So generous and helpful was the response of those present that the girls need feel no hesitancy in going forward, as not only were they promised the co-operation but financial assistance as well, after the aims of the organization were explained and points of interest taken up. An honorary executive Committee was elected as follows:—Pres.—Mrs. Lacey, Secretary—Mrs. Mullin, Com.—Mrs. W. G. Bolster, Mrs T. Flynn, Mrs. J. Hughes, Mrs. J. McAvoy, Mrs. J. G. Tait.

Five patrol leaders have been chosen and five patrols formed, with enthusiasm very high among the girls and everything pointing to very successful operations.

Mrs Daniel Empey, Crysler

The death occured on Wednesday, April 2nd, of an old and highly respected resident in the person of Sarah Johnston, beloved wife of the late D. H. Empey of Crysler, who predeceased her but eight months ago. Although the deceased had not enjoyed the best of health at all times, still she was able to be about until a few days previous to her death, which came as a great shock to many. She was 56 years of age and will be greatly missed, as her broad sympathies and jovial disposition won many friends. The funeral which was largely attended took place Thursday to St. Johns Church where a solemn and impressive service was conducted by Rev. E. A. Woolley, after which the remains were placed in the Church burying ground. The deceased leaves to mourn her demise three sons and one daughter—George of Vancouver, B. C., Harry of Morewood and Arthur and Consuella at home, also one sister Mrs. George Wagner of Morewood. Among those from a distance who attended the funeral were Mrs. Nelson Jarvis and Mrs. Allan Smith of Massena N. Y.

The pall bearers were—W. Armstrong, W. Paul, D. Nado, W. Servage, H. Armstrong and J. A. Coons.

The sympathy of the community is extended to the bereaved family in this their hour of double mourning, and for which.

Not now but in the coming years,
It may be in a better land;
We'll read the meaning of our tears
And there sometime we'll understand.

A Three Months Fast

That a pig can retain life for three months without nourishment has been demonstrated to Uriah Pendleton of Mulmer. Last December Mr. Pendleton was puzzled over the mysterious disappearance of a sow. He had ceased to think of his loss when a couple of weeks ago the sow reappeared in the barnyard. She weighed 450 when she vanished, but came back a skeleton, every bone being discernible. The sow had forced her way into a small passage between the remains of a stack which had been cut down sheer and the new straw stack built over it and was unable to get out. There she remained for three months and six days without anything to eat or drink other than what nourishment could be obtained from the straw within reach. The animal is picking up and has already commenced to put on flesh.

If you break a lens or a frame of your eye glasses Mr. A. E. Bolster can fix it for you—day or night every day—at W. G. Bolster's Drug Store, Chesterville.

Easter Music at Methodist Church

Born

LABRE—In Chesterville on Sunday, April 13th, 1919, to Mr. and Mrs. T Labre, a daughter.

In Memoriam

In loving memory of Corp. Orlen Merkley, who died in France Feb., 1st, 1919.

We have been looking and longing
For him,
But now our hearts are sore,
But it was God's will to take him
To his home on yonder shore.

He has gone to dwell with his Saviour,
To that heavenly home on high,
Where there is no pain nor sorrow,
Nor tear to dim the eye.

Farewell, farewell till we meet thee
On yonder bright shore;
When we hear the angels call
We will meet you at the door.

FROM AN AUNT.

Better Cooling Suggestions

(FARMERS CUT THIS OUT.)

BE SURE and have water tank filled, so that water will be high enough to reach the neck of the can. Stir your milk every ten minutes. 90% of high acid milk is caused by trusting to air cooling, and is responsible for great losses. "Don't do it. Cold water cooling is the surest way to avoid loss. Don't be careless."

Five-Legged Lamb

On Wednesday of last week Mr. Harry H. Robinson, of Perreton, was presented by one of his Oxford ewes with a lively lamb, but it had one more leg than usually belongs to members of the sheep family. When first seen it was skipping around quite lively with three front legs and two behind, but the extra leg is a little shorter than the two main ones. The lamb is a jet black and quite healthy and perfectly formed otherwise. It is attracting the attention of curiosity seekers.

Mrs. Hewitt—Reticence sometimes pays.

Hewitt—Right you are; if the whale had kept his mouth shut it wouldn't have had the trouble with Jonah.

First Boy—Why are you sad, Bill?

Second Boy—Oh, I'm troubled with dyspepsia.

First Boy—How can that be?

Second Boy—I got licked at school 'cause I couldn't spell it,

AEROPLANE WING SHAPES.

One of the Big Problems In Developing Flying Machines.

Wind shields on automobiles arranged to deflect the wind upward so that the driver will not receive the full force of the wind even when his eyes are above the level of the top of the wind shield, are common enough, but this principle of wind deflection has now been applied ingeniously to an aeroplane. The effect sought is to make a reduced air pressure above the aeroplane wings or planes, and consequently to increase their lifting power. The front of the wing is so curved that the wind shoots up above the plane instead of sliding along its top.

It is the idea of one of the great number of foreign scientists who are now studying wing shapes. His laboratory tests and a limited number of practical tests have convinced him that a very considerable increase of lifting power can be gained in this way. So he is now preparing to make complete tests with a practical machine. It is on this question of wing shapes that the future development of aeroplaning largely rests.

Birds have an enormously greater lifting ability in proportion to the power they exert than do aeroplanes, due undoubtedly to the shapes of their bodies and their wing forms.

The efficiency of the gasoline engine has enabled men to overcome the inefficiency of aeroplane shapes and wings, but the prevailing tendency in flying now is to give less attention to increasing the power and more attention to shaping the wings so they will lift as much as they should, and so that they will give better stability when flying through the air.—Saturday Evening Post.

The Turkish Question.

There are at least two courses open for the solution of the Turkish question. The first would not entail the actual disintegration of the Ottoman Empire, though it would carry with it the practical termination of Turkish misrule. The whole of Turkey in Asia, together with the Straits, would be placed under foreign control, which I feel very strongly should be American control, the Ottoman flag and sovereignty being maintained as mere forms. The various nationalities or areas would be given full measures of autonomy and self government under the influence and protection of the Great Power or Allied country the most closely interested—influence and protection which might be subject to the supervision of the central American authority. This authority would have the direct control of the Straits and of Armenia, in which areas it would act in place of the power the most closely interested, and not merely as a supervisory force, and it would have the right and the obligation to enforce good government in districts which, owing to the nature of their population, will probably remain Turkish. The second alternative would carry with it the disappearance of Turkey as a Great Power. Though certain parts of Asiatic Turkey might remain Turkish, there would come into being a number of new states or autonomous regions all entirely independent of Turkey and each probably under some form of direct or indirect foreign supervision. That supervision might be international as a whole or it might be separate for the different areas. In the former case it should be presided over by an American, and in the latter, the United States should be the controlling factor in the Straits and in Armenia. The situation in other localities would have to be superintended by the various countries most closely interested.—Asia Magazine.

Uses for Dead Leaves.

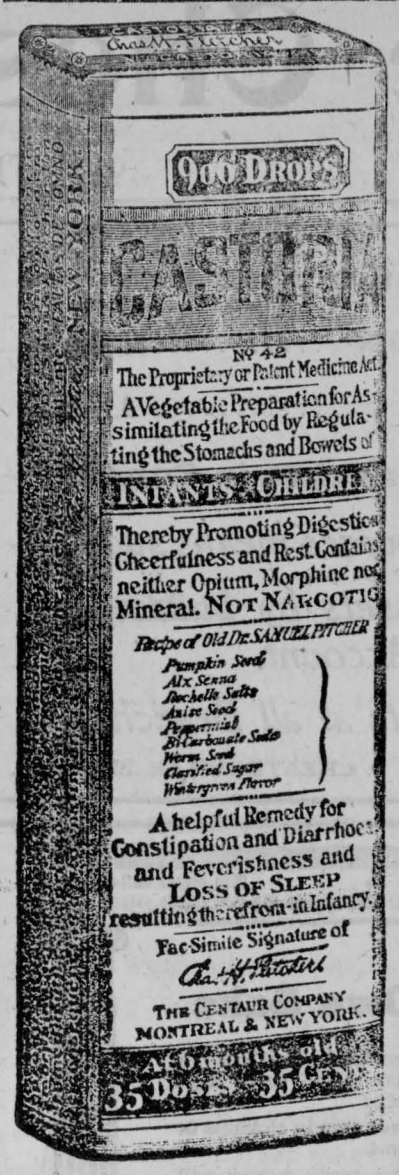

Experiments have been recently made in France with a view to utilizing dead leaves in the manufacture of paper. The leaves are crushed, then the powdered portion is carefully separated and the fibrous ribs and veins turned into pulp. These are made ready for use by simply treating with lye, washing, and bleaching. For cattle food purposes the leaf-powder may be mixed with molasses and made into cakes. For use as fuel, the powder may be compressed into briquets, or it may be converted into comparatively pure porous carbon by destructive distillation.—Farmers' Herald.

A Result of the War.

Women's work in war has taught the strength of united effort, and the worth of community service, the beauty and the duty of labor for the public weal. The valuable lessons in food conservation, in the avoidance of waste, in general economy, ought to bear fruit in a less prodigal use of material, money and time. The business lessons of war to women are incalculable, if used in the new values of activity which open before them in the present.

Danish Pigs.

At one time the slaughter of Danish pigs numbered 2,600,000 yearly, most of which supplied bacon for England. The number has steadily declined for the want of feeding stuffs, and one week recently only 1,230 pigs were slaughtered, not enough for home consumption, which requires at least 5,677 pigs. A further decline is expected and several slaughter houses may have to close.

Light Four Touring

Model 90
The Practical Car

MORE than 80,000 of these Overland Model 90 touring cars have been sold during the past year.

A pretty good tribute to their all-around dependability—their usefulness—their economy.

Compare this Model 90 with other cars in its price class. Note its style, its beauty and its easy riding qualities.

Its 32 horsepower motor is a wonder for power, reliability and faithful performance.

Soft cushions, long resilient cantilever rear springs and large four inch tires smooth out the rough stretches of road and make driving a pleasure.

We want you to try a Model 90 and form your own opinion as to its value. We will be glad to furnish the car and we feel sure that you will be satisfied with its performance.

Drop in today or phone us for an appointment.

Village Council

An adjourned meeting of the Village Council held Tuesday April 1st. Members all present. By the appointment of T. W. Lambert as Constable the list of Village Officers is completed and Bylaw No. 282 for their appointment was finally passed. The Officers for the year being:—

Auditors—T. J. McGee, W. A. Bowen.

Assessor—Geo. Heagle.

Collector and Truant Officer—Robt. McEwen.

Caretaker of Town and Fire Halls—F. Shirkey.

Sanitary Inspector—R. Garrett.

Pound Keeper—Broder Bailey.

Member of Board of Health—Jas. Hughes.

Clerk and Treasurer—Geo. Elliot.

It was decided to offer the Fire Engine for sale. Orders as follows were passed.

Municipal World Assessment.	$ 12 00
Public School Requisition	250 00
High School	900 00

Next meeting April 25th.

Peculiar Matrimonial Mix-up

Queer tales come to the ears of the ofgcials, but probably there has never been any so queer as that told by a Toronto man this week, The man is a resident of the city and according to his story, is not comfortable with his present wife. He wished to cut the gordian knot, and taste freedom once more. In his story he said that his present wife, was at once his wife, his mother-in-law and his stepmother. It seems that he married the daughter of his present wife some years ago. Soon after his marriage his mother died and his father married his first wife's mother. A few years passed and his wife went the way of all flesh, and, later still, his father passed from earthly travail. His stepmother was in Scotland at the time. Sorry for her in her loneliness, he brought her to Canada and married her.

Couldn't See Mother Before Her Death

George Cooper, Springbrook, who was sentenced last Friday by Magistrate Bradshaw of Kingston, to a fine of $210 for failing to report for military duty under the Military Service Act, was unable to attend his mother's funeral, or to see her before she died. While his brother paid the fine Tuesday morning, he was unable to get to him in time. His mother was taken ill after his arrest at the Madoc mines, and he was kept in close custody while his brother was endeavoring to raise the money for the fine.

Brockville Inspectors Seizing Liquor

During the past 12 days efforts of Inspectors Taber and Sykes of Brockville, in rounding up offenders against the Ontario Temperance Act have met with considerable success. Large quantitles of liquor have been seized and several bootleggers caught in the meshes of the dragnet. The inspectors have seized in that time 54 gallons of liquor and 356 bottles of whiskey, valued at slightly over $900, Montreal prices. They have secured six convictions of $200 each and four more cases brought before the attention of the court have yet to be disposed of. Three fines of $200 and costs each were imposed on Monday by Magistrate Page, the defendants being Italions who were caught with ten bottles of Italian whiskey and seven gallons of liquor.

SUBSCRIPTION RATES

The rates of subscription for The Record are now as follows:

To any address in Canada

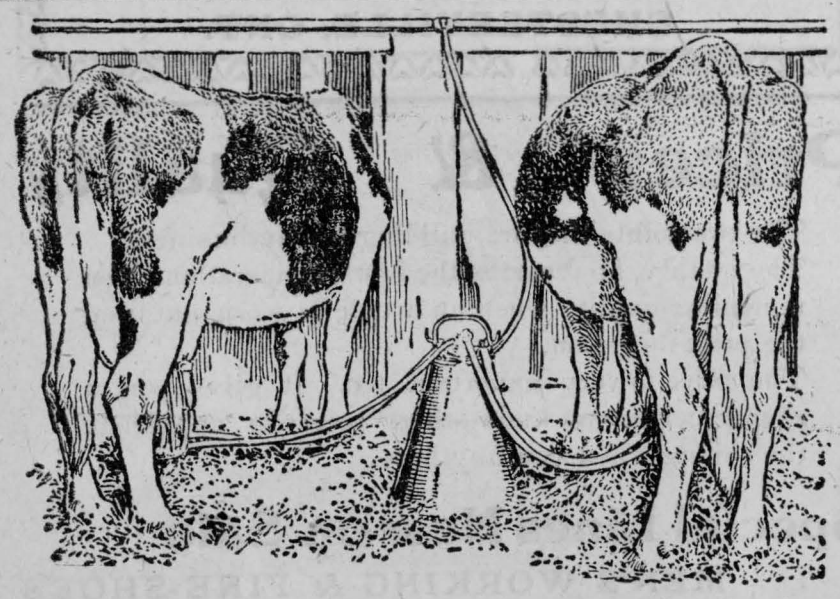

12 months for $1.50

6 months for 75c.

4 months for 50c.

To United States $2.00 per year.

All payable in advance.

Munitions or Milking-Machines

—Buy an Empire and Be Sure

FROM war-machines to peace-machines! The end of the war has diverted the manufacturers of munitions to the making of other things. Many, doubtless, will produce milking-machines—for they are needed. They will produce experiments—not the real, workable, tried and tested Milking-Machines.

Don't buy any of these new ventures.

Buy the Empire Milking-Machine, which long ago passed the experimental stage. The Empire has been used for years with entire satisfaction, not only by dairymen but by 18 Experimental Farms and Agricultural Celleges throughout Canada. The Empire is succcssful, safe, and will save you time and money from the first day you use it.

Come and see us about it. Or write for us to go to see you.

Stormont County.

EMPIRE
MILKING MACHINES

Ned Grady Dies on French Soil.

Many people of Chesterville and vicinity will remember Ned Grady, son of Mike Grady, formerly of Chesterville, but latterly of Butte, Mont. The following sketch of his life and death and in France two days before he was to sail for home is from a Butte paper.

Edward "Ned" Grady, footballer, hockey player and one of the best known young men of this city for the past 16 years or so, died at a base hospital near Brest, France, two hours before his company sailed from there for the United States. This story has been brought to Butte by pals of Grady from the same company who passed through Butte on their way to Camp Lewis to be mustered out of the service.

As the story is told, Grady had been ill for a few days, but was so anxious to return home with his company that he concealed his illness. A short while before the time for sailing he became so ill that he was taken to the hospital and passed away a couple of hours later. Ed Rouleau, a friend of Grady's has sent telegrams to New York to the Red Cross headquarters in an endeavor to secure all available information.

Mr. Grady was one of the third draft contingent from Butte for Camp Lewis. He was one day under the age of 31 years when he signed the draft. The occasion of his leaving Butte will never be forgotten. The contingent started from here on a Sunday afternoon. Led by Grady, the celebration started Saturday night. This was in the old days when the saloons were still running here. Friends of the draft contingent provided Grady and his friends with a barrel of beer. This was loaded on a wheelbarrow and it made the circuit of the principal streets. At various corners the marchers halted and regaled themselves from the barrel. It was an all-night celebration.

The following day, was Sunday, the street parade was resumed. On this occasion, however, Grady and "Pat" Grigg secured a pet monkey. It was the mascot for Butte contingent. The monkey was paraded all over town. A crowd followed. Songs were sung on the street corners and enthusiastic citizens started a collection so that the Butte boys might have every luxury on their way to camp and during the life in camp. A goodly sum was realized and Grady gave an excellent imitation of the "dago and his monk."

Local people will remember the Sunday afternoon for years to come. Each newspaper office in the city was serenaded. The best singers accompanied the boys and coutributed their talent. It was probably the best demonstration ever given boys leaving for the big war. There was nothing formal about the celebration, but each person on the street felt that he or she was having a personal part in the farewells. There were thousands in the depot when the train pulled out. The monkey was taken along and he furnished history at Camp Lewis for many months.

The camp life of "Ned" Grady and his associates furnished one of the most interesting chapters in the history of that section. Grady was the leader in everything, and the Butte boys, under Grady's guidance, led all others a merry chase. There were pranks at all times and Grady was in the middle of every fun that was started. When the 91st division sailed for France, Grady was a part as a member of the 316th trench mortar section. He continued to be the life of the boys on the way across and after reaching France. To their great disappointment, it is said, Grady and some of his pals did not get up to the front line. They were, however, in the reserves 20 miles behind when the Huns quit.

As a footballer, Grady's fame will live long in Butte. He was a member of the Columbia Juniors, one of the most famous football aggregations ever gotten together in Butte. He was a star individual player. As a hockey player he had few peers on the ice. A native of Canada, he came to Butte about 16 years ago and, without exaggeration, he was one of the most popular young fellows about town. He was leader at ever dance or party. No gathering of the young fellows of the city was complete without the genial "Ned", and he was the life and soul of each occasion. It is said that his father is still living in Canada. A sister lives in Anaconda, and there is a brother, who was in Butte at one time. He left Butte with a smile, ready for any fate and without a worry. It may readily be imagined that "Ned" met his death the same way. A splendid pal, a good fellow in the best sense of the word, a true friend, an honorable soldier, a patriot, a sterling citizen, "Ned" Grady was one of those whom a community can least afford to lose and for whom it will mourn for years.

"I'm surprised at Alice. She was going with that fellow long enough to know better than to marry him."

"Yes, but too long to do better."

WEATHER INSURANCE

Owing to the periodical recurrence of Windstorms and Cyclones, farm buildings being more exposed are often wrecked by these visitations

Protect Yourselves Against These Heavy Losses by insuring in your home company

THE ONTARIO FARMERS' WEATHER INSURANCE CO.

We will give you a blanket policy covering loss or damage in any form to buildings and contents including loss or damage to roof by hail storm and broken windows from the same cause.

We don't advertise cheapness, as some American companies do. but we carry no restricting clauses in our policies.

All loss or damage in or about the buildings, includieg live stock and implements, are paid to full value.

Our rates are as low as is consistant with fair dealing and is the minimum placed by the Department of Insurance for Ontario.

"Premium note liability" used by those stock companies across the line as a bogey, is merely German gas sent over to stampede farmers who have been using this system over sixty years with perfect satisfaction.

We are not a money making institution. We are operating to give protection complete to farmers at lowest possible cost.

CHESTERVILLE

In the Midst of Life

So frequently a man meets with death when apparently in health and looking forward to years of activity.

The income stops. His affairs disclose no resources whice will carry on the home and keep his widow and children.

In a case like this a policy in the Sun Life Assurance Co. of Canada, will promptly meet the financial necessities.

Full information of the various plans will be gladly given by

E. B. LYNCH

General Agent Office in Fulton Block. **Chesterville**

Returned men getting back into "civies" once more, demand above all else garments that give them that well-dressed feeling one enjoys in the knowledge that one is up-to-the-minute in style. This fact, coupled with the indisputable economy of Campbell's Clothing explains the popularity of this Brand among men just back from the Front.

G. C. LACEY,
Editor and Proprietor

Word Miraculous not too Strong

London, April 14.—Field Marshal Sir Douglas Haig, in his final dispatch made public, presents an important review of the war and describes in detail the expansion and achievements of the British army, with many remarkable facts and figures. He treats the operations in the western front as a single constructive campaign, in which can be recognized the same general features and necessary stages that, between forces of approximately equal strength, have marked all the conclusive battles of history.

"The high-water mark of our fighting strength in infantry," says the British commander, "was only reached after two and a half years of conflict, by which time heavy casualties had already been incurred. It was not until Midsummer 1916, that the artillery situation became even approximately adequate to the conduct of major operations.

"During the Somme battle artillery ammunition had to be watched with the greatest care. During 1917 ammunition was plentiful, but the gun situation caused anxiety. It was only in 1918 that artillery operations could be conducted without any limiting consideration beyond that of transport.

"The margin with which the German onrush of 1914 was stemmed was so narrow and the subsequent struggle was so severe that the word 'miraculous' is hardly too strong to describe the recovery and ultimate victory of the allies.

"The breakdown of Russia in 1917 probably prolonged the war by a year, and the military situation in Italy in the autum of 1917 necessitated the transfer of five British divisions to Italy at a time when their presence in France might have had far-reaching effects."

Sir Douglas records the interesting fact that more than half the British casualties in the fighting of 1918 occurred during the five months from March to July, when the allies were on the defensive.

"The rapid collapse of Germany's military powers in the latter half of 1918", he says, "was the logical out-come of the fighting of the previous two years. It would not have taken place but for that period of ceaseless attrition, which used up the German reserves. It is in the great battles of 1916 and 1917 that all have to seek for the secret of our victory in 1918."

The value of cavalry in modern war is emphasized by Sir Douglas Haig, and, in discussing the value of mechanical contrivances, such as tanks, he observes that, immense as their influence might have been, they could not by themselves decide a campaign. Their true role is to assist infantrymen, by whose rifles and bayonets only can decisive victory be won.

The expansion of British personnel, artillery, ammunition, transport, railway construction and establishments of every kind in France is dwelt upon by the Field Marshal. Regarding machine guns the British equipment increased from one gun to 500 infantry in 1914 to one to 20 infantrymen in 1916. The 486 pieces of artillery with which the British took the field in 1914 were represented at the date of the armistice 6,347.

On the first day of the Somme battle in 1916 nearly 13,000 tons of artillery ammunition were fired by the British on the western front. On two days, September 20 and 21, 1917, 42,000 tons were expended, and in three days of the crucial battle on September 27, 28 and 29, 1918, nearly 65,000 tons were fired by the British artillery.

Sir Douglas Haig said that the feature of the war, which to the historian may well appear most noteworthy is the creation of the new British army, which was successfully built up in the very midst of the war.

"The total of more than 327,000 German prisoners captured by us on the western Front," says Sir Douglas, "is in striking contrast to the force of six divisions, comprising some 80,000 fighting men with which we entered the war. That we should have been able to accomplish this stupendous task is due partly to the loyalty and devotion of our allies, and to the splendid work of the Royal Navy, but mainly to the wonderful spirit of the British race in all parts of the world".

With respect to the use of cavalry Sir Douglas Haig contends that in the light of full experience of the war the decision to preserve the cavalry crops has been completely justified.

"It has been proved," he added, "that cavalry, whether used for shock effect under suitable conditions, or as mobile infantry, have still an indispensible part to play in modern war. Moreover, it cannot safely be assured that in all future wars the flanks of the opposing forces will rest on neutral states or impassable obstacles".

The Field Marshal devotes a special section to: "Why we attacked whenever possible," in which he says:

"The object of all war is victory, and a purely defensive attitude can never bring about a successful decision."

He emphasizes that the defensive role sooner or later produces a lowering of morale while the defender becomes almost entirely ignorant of his opponents dispositions and plans. This was exemplified in the fighting of 1918. "So long as the enemy was attacking he obtained a fairly full information regarding our dispositions," says Sir Douglas "but so soon as he was thrown on the defensive, and the initiative returned to the allies, he was kept in comparative ignorance of our plans and disposition, and the allies were able to effect many surprises, both strategic and tactical."

Part-Time Courses for Boys and Girls.

Compulsory part-time education of boys and girls between the ages of 14 and 18 is provided for in the bill "For the compulsory School Attendance of Adolescents" introduced in the Legislature last week. On Thursday Hon. Dr. Cody had informed the House that he could not give an assurance that the measure would be down this session, but apparently it was decided to have the draft placed before the members for consideration such an important step demanded and put it upon the statute books.

The draft submitted divides adolescents into to classes: those between the ages of 14 and 18, who will be required to continue part-time education for 400 hours each year, and those between the ages of 16 and 18, who will have to give 320 hours part-time education each year. The bill is so worded that boys and girls between 14 and 18 years of age will be unable to secure employment unless they are able to produce school dismission certificates or employment permits issued by the school attendance officer.

There are a number of exceptions provided for. Illness or physical condition will be taken as an excuse. In the case of a boy or girl under 16 the Act will not apply if he or she has passed the matriculation of a recognized university or has completed a course of examination equivalent to matriculation. A lad or girl over 16 is free if up to that age he or she has had full time education or has passed matriculation.

The Act paves the way for part-time courses of study by laying upon every urban centre of 5 000 population or over the duty of providing such courses. Smaller centres "may" provide them. Where the courses are optional, and are not provided, the boy or girl, of course cannot be made to continue part-time instruction.

The date for putting the Act into force is left to proclamation by the Lieutenant-Governor, since even if it should be passed this session, which is unlikely, it would take some time to organize the part-time courses.

Potatoes—Seed and Time of Planting.

(Experimental Farms Note.)

The yield of potatoes throughout Canada would be very much increased if everyone who grew potatoes used seed of the strongest vitality, free from disease. While the variety used is important, the seed often makes much more difference in the yield than the variety.

Seed potatoes from a crop which grew vigourously until the tops were cut down by frost in autumn usually give much better returns than those from a crop where the tops dried up in the middle of the summer. There are parts of Canada where the former conditions obtain, as a rule, and it is from such places that the most vigourous seed is usually obtained.

In 1918 the best seed of the green Mountain potato yielded at the rate of 387 bushels per acre while the poorest seed yielded only 57 bushels per acre at Ottawa. In the case of Irish Cobbler, the best seed yielded at the rate of 616 bushels per acre while poor seed yielded only 23 bushels per acre, a remarkable difference. Just as striking differences have been obtained in other years.

Each grower of potatoes should aim to have a full stand of plants in the field and to have every plant a vigourous and healthy one There is often a large proportion of misses in potato fields and a still larger proportion of weak and diseased plants which lessen the yield enormously.

Experiments have been tried in different parts of Canada to determine the best time to plant potatoes for highest yields, and from these experiments and the experience of the best growers, the date suggested as being the best in Ontario is May 1 to June 15, depending on what part of the province. The tendency has been in most places in Canada to plant later than is desirable for highest yields. From results obtained, the following general recommendation is made:—

Where the spring is early and autumn frosts early, plant early. Where the spring is early and summers are dry, plant early where the spring is late and autumn frosts are late, early planting is not so important. Where the spring is early and autumn frosts are early, plant as soon as soil is dry enough.

PANAMA'S WATER BRIDGE.

That Is What Uncle Sam's Wonderful Canal Really Is.

What the engineers of the United States government are constructing at Panama is not a canal through the isthmus, but a bridge of water across and above it. The so called canal is a huge water bridge, the first in the world's history. It is about thirty-four miles in length, eighty-seven feet high, with a channel of water through its center varying in depth from forty-five to eighty-seven feet and in width at the bottom from 300 to 1,000 feet.

The bridge is divided into two sections, Gatun lake and Culebra cut, the latter being an arm of the former. Access to the bridge by vessels will be by means of water elevators, six in duplicate at either end, each 1,000 feet long, 110 feet wide and with a combined lift of eighty-seven feet. At the Atlantic end the elevators are grouped one above another, like a flight of three steps. At the Pacific end two pairs of elevators are grouped at the bottom and are separated from the third pair above by a platform of water in the form of a lake about a mile and a half in length. The piers or walls which hold the bridge in place are the Gatun dam and elevator gates at the Atlantic end and the dam and elevator gates at Pedro Miguel, at the Pacific end.

About nine miles of the canal will be through Culebra cut, and these nine miles constitute all that can properly be called a canal unless the sea approaches at either end be included in that designation.—Joseph Bucklin Bishop in Scribner's.

"He's Got It."

The very newest slang expression among college undergraduates, where slangy and picturesque expressions always are up with and often ahead of the times, is "He's got it." If a man has "got it" he is distinctly all right. His fellow students have put on him the seal of their unqualified approval. They have bestowed upon him the highest praise that they can bestow. There is about him an indefinite something, morally and mentally, that makes him all right—a square, clean, capable, likable chap. As is the case with most slang, the genesis of "He's got it" is hard to trace.—New York Letter to Pittsburgh Dispatch.

Who Edits the Magazines.

During a recent discussion of the old question, college versus no college, one of the contestants remarked that the substantial monthly magazines were not edited by college graduates. The man who made the remark was promptly confronted with the following record:

The Century, edited by Robert Sterling Yard, Princeton '83; Scribner's, Edward L. Burlingame, Harvard '69; Harper's, Henry M. Alden, Williams '57; Atlantic Monthly, Ellery Sedgwick, Harvard '94; Review of Reviews, Albert Shaw, Grinnell '79, and World's Work, Arthur W. Page, Harvard '05.

Proved He Wasn't Dead.

M. Augustin Jeourel, who has just received the military medal for gallantry at Gravelotte during the Franco-Prussian war, has been forty-three years in convincing the authorities that he is alive. He was badly wounded in a bayonet charge and was registered as killed on the roll of the regiment. When he regained consciousness he found himself in a German hospital. When he applied to the minister of war for the military medal he was informed that he was dead, killed at Gravelotte by a Prussian bullet.

Boy Miners in England.

More than 10,000 boys under sixteen years of age were injured in mines in Great Britain last year in such a way as to disable them for more than a week. There are about a million coal mine workers altogether, one worker in every seven being killed or injured last year.

Willie's mother returned home just after her boy received his lesson from the music teacher.

"Willie," asked she, "did you wash your face and hands before the music teacher came?"

"Yes, ma'am."

"And your ears?"

Willie hesitated a moment. Then he answered: "Well, mother, I washed the one that would be next to her."

Wifey—you must not expect me to give up my girlhood ways all at once.

Hubby—That's all right. Go on taking an allowance from your father just as if nothing happened,

ONLY MEDICINE MADE FROM FRUIT

Extraordinary Success which "Fruit-a-tives" Has Achieved

One reason why "Fruit-a-tives" is so extraordinarily successful in giving relief to those suffering with *Constipation, Torpid Liver, Indigestion, Chronic Headaches, Neuralgia, Kidney and Bladder Troubles, Rheumatism, Pain in the Back, Eczema* and other Skin Affections, is, because it is the only medicine in the world made from fruit juices.

It is composed of the medicinal principles found in apples, oranges, figs and prunes, together with the nerve tonics and antiseptics of proven repute.

50c. a box, 6 for $2.50, trial size 25c. At all dealers or sent postpaid by Fruit-a-tives Limited, Ottawa.

Seed Sowing and Early Care of Vegetables.

(Experimental Farms Note.)

The time of sowing the seed and the early care of vegetables are very important factors in the successful growing of them. The seed of some kinds of vegetables will germinate at a temperature and under certain conditions of moisture at which other seeds will not germinate and sometimes rot.

Seeds of beets, carrots, onions, parsnips, peas, radishes, kohl-rabi, garden cress, salsify, spinach, parsley and leeks can be sown as soon as the ground is dry enough in the spring so that it will work well. The seeds germinate at relatively low temperatures and the plant will stand considerable frost without serious injury. Other vegetables such as cabbage, cauliflower and celery will also stand frost but these are usually started in a hot-bed in order to save time in the field.

Vegetables which require higher temperatures than the above in order to grow well and which are injured by light frosts are beans, corn, cucumbers, melons, potatoes and squash.

Seed of late cabbage is not sown until late in May but it will endure frost, and seed of Swede turnip should be sown late when required for the table.

In order to obtain plants subject to light frosts, which are well advanced before being set out and to save considerable time the field, melons, egg-plants, peppers and tomatoes are usually started in hot-beds.

Frequently lack of germination of seed is blamed on the quality of the seed whereas it may be due to the way the seed is planted or to the rotting of the seed in the ground when certain kinds of seed have been sown too early. Small vegetable seeds one-quarter of an inch for the smallest to one-half of an inch for those a little larger is deep enough. If planted much deeper the seed may germinate but the shoot does not reach the surface of the ground and the tiny plant dies. Peas, corn and beans are planted about two inches deep. In very loose soils, the surface of which dries more than those fairly compact, slightly deeper planting may be necessary.

When young plants are grown in a window in a house they are often very thick in the pot and if in the sun and with the surface soil wet, they are very liable to damp off or scald. They should be thinned out and transplanted as soon as possible.

Plants which have been growing in a hot-bed or cold frame or in the house should be exposed to the open air for several days before they are set in the field without hardening off in this way they are much more liable to be injured in cold or windy weather.

Examiner—Now, William, if a man can do one-fourth of a piece of work in two days, how long will he take to finish it?

William—Is it a contrac' job or is he workin' by the day?

GREAT ZUYDER ZEE DAM

LITTLE NATION WILL ADD TO ITS AREA.

Dyke Is to Cost $90,000,000, and It Will Require Thirty-three Years to Build, But 820 Square Miles of Inundated Land Are to Be Reclaimed by Scheme.

DAM the Zuyder Zee! So say the deliberate Dutch. In fact both Queen Wilhelmina and the States General are of the same mind. On June 14 last, the royal signature was affixed to the bill that has been under advisement by the Parliament of the Netherlands for five years and more. In fact, the broad idea of draining the Zuyder Zee has been a subject of discussion for quite half a century, and the best of Dutch engineering talent has given the matter the closest study since 1886.

As might be expected, the Hollanders have preferred to put their hard-won guldens in trade and other enterprises from which they could be certain of prompt returns. Besides, the sluggish native mind accepted the intrusive sea as a more or less necessary evil, and the demand for an increase of arable acres was not so imperatively insistent as it has become of late. The Netherlands could draw upon neighboring countries and even from overseas for many of its foodstuffs, and the desirability of self-sufficiency in the matter of producing subsistence was not urgent. The Government and the people generally have had a rude awakening to Holland's agricultural deficiencies in the course of the last four years; hence the law which empowers the authorities to isolate the Zuyder Zee from the North Sea, and to bare to the light of day a very large part of the watery area which will then be impounded.

The genius who is responsible for the great project as it now stands is C. Lely, a distinguished hydraulic engineer and at one time Minister of Public Works and Waterways of the Netherlands. One of the most difficult aspects of the whole problem has been that of taking care of the several rivers that now find outlet into the Zuyder Zee—the more question of shutting out the North Sea was, despite the magnitude of the task, really of secondary importance, because the discharging rivers would inevitably add to the volume of the waters of the enclosed Zuyder Zee and inundate a still wider area of the continguous lands. It was in just this crucial phase of the scheme that Lely showed his professional cunning and imagination.

He has not proposed to strangle the rivers and thus to shut out all communication with the open sea, but he has planned to control their discharge by turning their waters into superior highways for traffic to and from Amsterdam, Kampen, Stavoren, and other internal and prosperous ports, taking advantage of the deepest routes as they now exist in the Zuyder Zee and restricting the land to be reclaimed to the shallowed parts of the interior sea.

As the Netherlands is to-day, the country has a total area of 2,648 square miles. The project, which will be taken in hand at once, will involve the reclamation of 820 square miles of the present bed of the Zuyder Zee, and the turning of the greater part of this land into fertile fields. In brief, the purpose is to add to the Netherlands a new-born province large enough to provide 4,800 farms, each of 100 acres, and to create districts that will sustain an industrious populace of a quarter of a million persons. To make this possible, the Dutch will spend $89,244,000, and to lessen this drain upon domestic resources the work will be spread over a total period of thirty-three years.

The Hollanders have battled with the sea and flood for centuries, and by reason of this long experience they have become experts in the building of dykes and the holding of water at bay. What they have been able to achieve with traditionally instable sand has been little short of marvellous, and from them De Lesseps conceived the practicability of the Suez Canal and was inspired to essay the union of the Atlantic and Pacific Oceans via a cut across the Isthmus of Panama. Heretofore, the Dutch have held back from taking actual steps toward draining the Zuyder Zee because of the immense outlay that would be involved; but the war has taught them that they must produce more food within their own boundaries, and more food means more farms. Just how great is the demand for self-subsistence is emphasized by the fact that the Netherlands will have to spend $20,000,000 more to carry out the project now than would have been required a few years back.

Without digging into hydrographic history, it is enough to know that the Zuyder Zee is an erosive offspring of the North Sea; and the area of this inland body of water which is to be barricaded off, and in a large measure drained, came into being as recently as the early part of the fifteenth century. The Zuyder Zee never would have been created were not the flooded area lower than the outlying sea. The battering billows of the North Sea broke through nature's bulwark at a point inside of the Frisian Islands, and the briny waves swept unchecked into the depressed region.

As far back as 1850, one Van Diggelen boldly schemed to shut out the ocean by diking the passages between the Frisian Islands—Texel, Vlieland, Terschelling, and Ameland. That husky Hollander was not content to halt at half measures; and in his plan to oust the North Sea he overlooked the disposal of the waters pouring into the Zuyder Zee from rivers within the national boundary. He made no provision to take care of their voluminous ebb. His plan, in short, invited disaster from an internal cause, and his compatriots were alive to the danger.

HE KNEW HIS SON.

Father of ex-Kaiser Saw Danger In His Conceit.

The Berlin Tageblatt of December 11 published, on the authority of Herr Ernst Goetz of Leipsic, a letter sent to Bismarck in 1886 by the then Crown Prince Frederick, father of the recent Kaiser. The letter was dated at Portofino, September 28. In less than two years both he and his father were dead and his son, as Emperor William II. a year and a half later had dismissed Bismarck as his official adviser.

"My son, Prince William, without my knowing it, has expressed to his Majesty (the Emperor William I), a desire during the coming winter to make closer acquaintance with the activity of our ministries. Consequently, as I hear, the plan has already been contemplated at Gastein of employing him in the Foreign Office.

"As I have not yet received official information about it from any quarter, I consider it necessary in the first place to address myself confidently to you, in order to learn what has already been settled, and also in order to say that, although I agree in principle with the initiation of my eldest son into questions of higher administration, I am decidedly opposed to his beginning in the Foreign Office. For, in view of the importance of the duties which will fall to the prince, I consider it necessary above all things that he shall obtain knowledge of the internal conditions in his own country, and feel himself fully informed about them, before he concerns himself, even in a minor degree, with politics, especially as he is inclined to exaggeration, and arrives at very rapid conclusions.

"His real knowledge is still defective and he lacks the necessary foundations; for this reason it is extremely necessary that his knowledge should be raised to a higher plane and made more complete. This purpose would be met by giving him a civilian instructor, while at the same time, or later on, he might be employed in one of the administration ministries.

"In view of the immaturity of my eldest son, combined with his tendency to conceit, I must describe it as positively dangerous to bring him at once in contact with foreign questions.

"While I beg you to regard this letter as for yourself alone and as strictly confidential, I count upon your support in this matter, which is a very serious concern to me."

Over Four Hundred Perfumes.

It is interesting to note that 4,200 species of plants are gathered and used for commercial purposes in Europe. Of these 420 have a perfume that is pleasing, and enter largely into the manufacture of scents, soaps, and sachets.

There are more species of white flowers gathered than of any other colors—1,124. Of these 187 have an agreeable scent.

Next in order come yellow blossoms, with 651, 77 of them being perfumed. Red flowers number 823, of which 84 are scented. The blue flowers are of 594 varieties, 34 violet blossoms number 308, 13 of which are pleasantly odoriferous.

Lady Paget Honored.

The first recipient of the medal of honor established by the New York City Federation of Women's Clubs is Lady Ralph Paget, of England.

Still a Secret.

"Oh, dear, I feel so miserable."

"What's the matter?"

"Miss Gabbins told me a secret and I can't remember what it was."

Usually So.

"What is an optimist, pa?"

"A man who doesn't want other people to worry when he sees things all coming his way."—Baltimore American.

PRACTICAL HEALTH HINT.

Snoring.

Snoring during sleep is generally an evidence of some obstruction in the nasal passages. Possibly the person is suffering from adenoids or thickening of the nasal mucous membranes, and, if so, he should consult his family physician. If it is a mere habit and there is no sign of obstruction of any kind, then bandaging of the mouth will sometimes bring about a cure. Apply the bandage sufficiently snug to prevent the air from getting into the mouth. Bandage the same as you would for a broken jaw, taking pains to close the mouth.

The Real Revelation.

"A famous lecturer says that the slashed skirt shows whether or not woman is qualified for the ballot."

"Huh! He means the ballet."—Judge.

How He Found It.

Waitress (to diner)—How did you find your steak?

"Oh," he replied, "I lifted up my potatoes."—Successful Farming.

Marine Peculiarities.

There are two natural phenomena of quite regular recurrence which have given unique fame to the Japanese bay of Toyama. The lightning cuttlefish is a rather tiny species that emits a wonderful phosphorescence when aroused, and while the fish is not confined to the locality, it swarms along the coast in April and May. As the fishermen seek them with special nets the alarmed creatures glow with exceptional brilliance. The second phenomenon is the Shinkero or mirage. The mirage, seen along the shore, begins as a faint mist and then develops into a panorama forest, castles, bridges and marching men and horsemen.
