THE HARDWARE STORE—OPPOSITE ST. LAWRENCE HALL

MORRISBURG — ONTARIO

BY-LAW CARRIES BY MAJORITY OF 179

Seldom, if ever, have the citizens of Morrisburg spoken so decisively on any question as they did through the almost unanimous vote on the by-law to fix a flat rate of assessment for the Morrisburg Lumber Company. Out of 181 who recorded their vote, only two voted against the by-law, and it is surmised that the two who voted "against" did so by mistake—it surely looks it.

This splendid success is an outward expression of appreciation, extending the hand of welcome to the worthy management. It is an indication that the citizens have faith in the new concern, which already has made considerable progress in expanding and finding new markets.

Industries seeking to locate in Eastern Ontario will find few municipalities offering better inducements and more willing to offer whole-hearted co-operation, than the citizens of Morrisburg.

TRIBUTE TO LATE DR. E. McLAUGHLIN

The Leader received a letter this week from Dr. H. E. Hayunga, chairman, Medical Board, Lutheran Hospital of, Manhattan, N.Y., an old schoolmate of the late Dr. E. McLaughlin, in which he enclosed the title page of an American Journal, "Clinical Medicine", appended below, which he terms "a fitting tribute to an old schoolmate, Dr. E. McLaughlin."

"THE DOCTOR'S EPITAPH"

The Doctor Sleeps! No more at Pain's behest
Shall he relinquish his much needed rest;
No more his skillful hand and tender heart
Shall give to some new life a proper start.

The Doctor Sleeps! His fighting days are done,
But hundreds live because of bouts he won,
And, generations hence, those will draw breath
Who would not BE had he not vanquished Death!

The Doctor Sleeps! Might we his deeds recall
His name would blaze in Fame's enmarbled Hall
But, serving modestly through life, it now seems best
To merely write "His Work Survives," and let him rest!

G. H. C.

WOMENS INSTITUTE

The annual meeting of the Women's Institute was held Monday May 7th in the Library Rooms. The following reports were read:

Secretary's Report

The Women's Institute for year, May 1922 to May 1923 had a membership of 32, a decrease of 20 as compared with last year. During the year seven meetings were held, six regular and one special meeting.

In June arrangements were made for Chautauqua and delegates were appointed to District annual at Chesterville and Institute meetings were adjourned for summer. In October letters were read re sale of Poppies to be worn on Armistice Day. We made $13.83 clear on sale of same and sent cheque to treasurer of Poppy Day Campaign for $19.97. Total receipts of sale $33.90 and arrangements were made for canvass for Cornwall General Hospital. We sent 11 bags of vegetables two barrels of fruit and one basket of smaller jars of Jelly and marmalade and a cheque for $33.50 and one pair pillow cases, one bath towel and bandages. Later in October an appeal was received for Northern Ontario Fire Sufferers and $25.00 was voted to buy materials to be made up into garments for women and children and two shipments of clothing, shoes, etc., were shipped to Cobalt. First shipment was four large bales and six boxes and the second 180 pounds in all, and in January a shipment of yarn was sent to New Liskeard for relief of fire sufferers.

At December meeting arrangements were made to ship Christmas Boxes to Old People' Home, Cornwall, and a letter expressing the gratefulness of inmates was received by Miss Farlinger and read at the December meeting. Mrs. Davy asked to be released from Library Board this year, and Miss Jane Smith was elected to fill the vacancy. Five dollars was paid to the Treasurer of Horticultural Society for prizes as in previous years.

In February we realized $50.00 at the Valentine Food Sale which was paid over to Treasurer of Library.

No special courses were held, it seemed impossible to arrange for any last year and the programmes were missing, a fact very much to be regretted.

The following officers were elected for year June 1st 1923 to June 1st 1924:—

President—Miss I. K. Farlinger.
1st Vice-Pres.—Mrs. Geo. Challies.
2nd Vice-Pres.—Mrs. Geo. Gorrell
Sec.-Treas.—Miss Jane Dillen.
Directors—Mrs. J. H. Meikle, Mrs. J. McMartin, Mrs. M. Whitteker, Mrs. Geo Merkley.

The following Program committee for three months were elected: Miss Loucks, Mrs. Hepburn, Mrs. J. A. Farlinger.

Every woman should be a member of the Institute, the joining fee is only 25 cents and the officers are planning a full program for this year. Our motto is: "For Home and Country."

DAISY'S SECOND BIRTHDAY

(Contributed)

Everybody has a birthday but very seldom one could enjoy theirs more than Daisy Rebekah Lodge No. 223 of Morrisburg.

On Monday evening, April 16th, it was decided to have a social gathering in honor of the lodge's second birthday, which lodge was instituted on May 13th, 1921. As May 13th this year come on a Sunday, it was thought best to hold the big event on Friday evening, May 11th.

As soon as this was decided, invitations were at once sent to the Rebekah lodges of Cornwall, Williamsburg and Dickinson's Landing, and also to the Subordinate Lodge with their families of Morrisburg.

It is always customary to have a birthday cake at a party of this kind and Daisy Lodge are to be congratulated on the very lovely and excellent cake which they prepared. Sister Clark, P.P. of Cornwall also brought a birthday cake with her for her Baby Lodge, and these two side by side in the middle of the lodge room were very much admired by all present, and also caused some enjoyment when being cut as all articles which are usually placed in birthday cakes were also in these cakes.

The night was not at all agreeable for the event as the rain kept falling continually, but never the less it did not halt the guests from coming as they always enjoy themselves when invited to Daisy Lodge. Upwards of two hundred people gathered in the Lodge Room for the birthday.

The first part of the evening was devoted to a progressive euchre for which suitable prizes were awarded. The winners being as follows: Ladies: 1st, Mrs. A. Deeks; 2nd. Mrs. McIntosh. Gentlemen: 1st. W. Whittaker; 2nd Mr. O'Dare.

At the finish of the euchre a short but very enjoyable program was given. In this the Cornwall Ladies assisted very much and all present enjoyed each number as it was rendered. Great praise is due to the young Miss Luva Bridges of Cornwall, whose dances were much enjoyed. A few short addresses were also given by members of different lodges present.

After the program, presentations were made to Sister Clark, P.P. and Sister Bailey, D.D.P. both of Cornwall (Mothers, so to speak of Daisy Lodge). Both these ladies replied to the presentation address which was read by Noble Grand Sister Nash of Daisy Lodge. In connection with this the Sisters of Daisy Lodge had a short march especially prepared for the presentation, and they are to be congratulated in the excellent manner in which this was carried out.

After this the big event, supper was announced. As the dining room was only able to seat about eighty at one time, it was necessary to have three sittings in order to make sure all present did not go away hungry. It was a very enticing supper and when sitting down if they were not hungry it made everyone hungry when they saw what was before them.

As soon as the first table was cleared, an orchestra which was waiting, commenced playing, and the dances were all enjoyed very much. At the closing of the evening all were sorry but at the same time it was a happy but tired looking crowd who departed by motor and train about 4.00 a.m.

The Officers and members of Daisy Rebekah Lodge desire to express their sincere thanks to Mr. H. H. Bradfield for loaning of rooms for the use of the ladies; to Brother Henry Clark, for the loan of chairs, and also to the members of Cornwall lodge for the assistance which they gave in connection with the program.

SAMUEL SMYTH

Dundas County lost one of her most highly respected and prominent citizens on Monday, May 7th, when Samuel Smyth of Dundela passed away very suddenly at his home here at the age of 67 years, two months and twelve days. Following a life of activity up to the hour of his death, his call came as a severe shock to the community in which he always proved a wise counsellor and added strength.

Deceased has been a lifelong resident of Matilda and a successful farmer—interested in furthering any schemes for the development and progress of the township.

In December 1891 he was married to Catharine Rose who with four children, survive, namely, Cephus R. Smyth, Mrs. Harry Johnston, the Misses Kathleen and Gertrude, all of Dundela.

In his home life deceased was revered and loved for his kindly, sympathetic spirit, his frank manner and spirit of helpfulness. His jovial disposition made him a man who will be sadly missed by his many friends in his home county.

McLAUGHLIN-Buick

The Standard of Comparison

A High Quality Car at a Modest Price

Master Four 23-38 Touring Sedan

In addition to its smart appearance, the trunk is useful for samples and papers, and for shopping bundles, as well as luggage when touring.

B1616

For the man or woman who seeks a refined, handsome closed car for business or pleasure — one that provides complete protection in all weather—this four-cylinder touring sedan meets every requirement. The design of the beautifully-finished Fisher-built body gives the intimacy of a coupe with the carrying capacity of the sedan. The interior fittings are harmonious and tasteful.

Provision for samples, parcels, luggage, etc., is made in the handsome trunk, carried outside at the rear.

And the price of this fine closed car makes it a value without comparison.

There Are 15 McLaughlin-Buick Models to Choose From

Address communications to Agronomist, 73 Adelaide St. West, Toronto

SUMMER FEED FOR COWS.

Tiding the cows over the dry period of summer is a difficult and important matter for us dairymen. Cows which freshen late in winter and in the spring produce well for a short time and then fall off heavily in the milk flow, due very largely to the decline of pasture and the lack of some early maturing succulent feed.

Oats and peas make an excellent combination for summer feeding. I have grown them heretofore for forage with excellent results. The crop may be cut green and fed as a soiling crop or matured and stored. I would sow one and one-half bushels of oats and one bushel of peas to the acre as early in the spring as the soil can be made ready.

Where a large acreage of clover hay is grown, some of it can be cut early and used for feeding. I have done this as early as the fifteenth of June. Alfalfa can be used in the same manner. A neighbor has been feeding alfalfa as a soiling crop and likes it very much for the purpose.

For summer and early fall feeding, I have been growing a small acreage of sweet corn for my cows. It is ready at a time when pasture begins to decline in quality and aids materially in keeping up the milk flow. Sweet corn is highly palatable and produces a large tonnage of fodder. I sow the corn as early as possible after the early spring crops are in, upon good clover sod which has received a covering of manure during the winter. About twelve quarts of seed per acre are required.—Leo C. Reynolds.

HOW I RAISE BETTER OATS.

From experience covering over twenty years, I find that most inferior oat crops are due to inferior seed. I do not mean that farmers intentionally sow inferior seed, but rather that many farmers sow inferior seed without being aware of the fact.

I find that the cost of improved seed is very low, considering the good results that are sure to follow its use. Nor does good seed necessarily mean high-priced seed. Good seed will make a rapid early growth, which is very essential to a good crop of oats; a good crop is rarely seen from a field that makes a slow growth in the spring. Just as much labor is required to sow poor seed and harvest a small crop as to sow first class seed and harvest a good crop; hence, the balance is all in favor of the better seed.

A good way to secure good seed oats is to take a good variety of native oats and run it through the fanning mill three or four times, until only the largest and plumpest kernels remain. We fan out about 40 per cent. of our oats, leaving only the strongest and best-filled kernels. This seed will germinate quickly, sending forth strong, hardy shoots.

By following this plan year after year, the same strain of oats will increase in weight as well as in yield. Since we adopted this plan, we raise from 25 to 30 per cent. more oats than we were able to raise before. There is no waste in this method, as the light oats are used for feed; whereas, if the oats are sowed without cleaning, a large percentage of the light kernels will not germinate, and will therefore be wasted.

Smut in oats will reduce the yield to a large extent. However, this is easily prevented by the formalin treatment. I find that the amount of seed to sow per acre varies greatly according to the condition of the ground. In sowing grass or clover seed with oats, it is not safe to sow the oats too thick. We have raised our best crops by sowing from 2½ to 3 bushels of oats to the acre. This leaves room for a good seeding for the next year's hay crop. When grass or clover are not sown in connection with the oats, 3 to 3½ bushels to the acre is a safe amount to sow on well-prepared ground containing plenty of fertility.

When farmers are annoyed by oats lodging, most generally it is supposed that the land is too rich. This is not always the case, however; it is often because the soil lacks some essential element. The soil may lack potash, which gives strength to the stalk. If fertilizer, containing a goodly amount of potash, is applied, this trouble may often be overcome.—L. M. D.

APPLE APHIDS EASILY CONTROLLED.

Aphids on apple trees are quite easily controlled by the use of a spray containing lime-sulphur and nicotine applied just as the insects are hatching out in the spring.

There are two kinds of aphids commonly found on buds of apple trees in the spring, one known as the rosy aphis and the other as the green apple aphis. The feeding of these insects results in dwarfed, mis-shapen fruit unfit for market and is frequently a serious loss to growers.

Experiments have demonstrated that thorough spraying with a mixture containing two and one-half gallons of lime-sulphur, three-quarters of a pint of nicotine sulphate, and water to make 100 gallons at the time that the tips of the leaves of the fruit buds protrude from one-fourth to one-half inch will control the pests most effectively.

Careful spraying from the ground and under the tree rather than from the top of the spray tank is regarded as an important factor in the control of these pests.

HORSE

Horse stalls so arranged that a heavy inch rope, stretching across each stall behind the horses, saves the necessity of halters. The attachments for each rope are made in a blacksmith shop and must be reasonably heavy and bolted firmly to the stall. One end of the rope is fastened to a ring and bolted to the stall. The other end has a heavy hook to drop into a ring when fastened. Arrange that the stalls are high at the front end so horses cannot reach each other's heads. This method of fastening prevents the horses backing up and kicking at each other. Horses that attempt to kick at another while passing behind soon learn that the rope is there and is effective. Horses are easily cared for and apparently enpoy the greater freedom of their bodies when not tied by the head. The halter headstalls are hung up in case of need, but are rarely used.

Building Up the Poultry Flock

In this bulletin on "Poultry Keeping in Town and Country," Mr. F. C. Elford, Dominion Poultry Husbandman, gives some invaluable advice on how to get pure breeds. He points out that the old theory that mongrel stock gave the best results has not proved true in experiments. The foundation stock, he says, should be pure, but there should be a continuous selection year after year. Only birds of the best type and strongest constitution should be bred. It is advisable for a poultry keeper who does no trap-nesting to purchase a cockerel each year from a good laying strain and use him rather than one of his own breeding. In buying cockerels it is wise to get them, if possible, from the same breeder as the original stock came from.

One way to obtain pure-bred stock is to buy eggs, breeding stock, or day-old chicks. Another way is to buy pure-bred males and grade up the flock already on the plant. The latter way is recommended to increase the egg yield, but is not advised for the purpose of changing a mongrel flock into a pure bred.

Eggs for hatching should be obtained from hardy stock known to be good winter layers and conforming to the general breed type. The nearer home the eggs can be purchased, other things being equal, the better. It should be remembered in exchanging eggs with neighbors that breeding eggs are worth more than market eggs. Never, advises Mr. Elford, because they are cheap, buy eggs for breeding purposes late in the season. In a climate like that of Canada, chicks hatched before the middle of May give the best results, though with good care they may be hatched several weeks later; but if pullets are not well developed before winter comes they should never be used for breeding. Late hatched chicks are seldom worth the trouble it costs to raise them.

Breeding stock can best be bought in the fall, but if the buying has been left to spring then wait until the breeding season is over. It is wise to stick to the same variety and buy, if possible, from the same source each year. In selecting a male bird choose a bird that is strong in the points in which the hens are weak. If the practice of buying a new male bird each year is followed, the male bird should be taken from the flock as soon as the breeding season is over, and the cockerels disposed of, or separated from the flock, before they become troublesome.

Weedless Farms.

To keep farms free from weeds, few methods give such good results as a systematic short ration of crops, with regular seeding down to grass or clover at short intervals, remarks the Dominion Seed Commissioner in his bulletin on "Weeds and Weed Seeds." Weeds are most in evidence in districts where the production of cereal grains predominates and where the systematic alternation of crops is not generally practiced. Thorough cultivation with a systematic rotation of crops, combined with the maintenance of as many sheep as can be kept to advantage, is a certain and profitable means of keeping weeds under control. But superior to all suppression methods is precaution in the sowing of clean seed—that is seed that has been as perfectly purified as possible and which comes off clean land. In many cases proper sieves in the fanning mill will remove most of the weed seeds.

In this backward spring, doing the right thing at the right time is what counts.

The farmer's success is going to depend upon the business he gets. If he waits for the buyer to look him up, or his neighbors to tell everybody about his goods, he is expecting too much of human nature, and it will be a long time before his sales will reach any noticeable volume.

THE CHILDREN'S HOUR

MY NEST.

Up on a hilltop ever so high
There's a grassy nest where I love to lie.
There I keep very still,
And watch until
All kinds of wonders pass me by.

There's a flutter of wings, a bird draws near;
He knows I'm a friend and he has no fear.
He swings to and fro
On a branch below
And trills a song that I love to hear.

Bright as the sun and blue as the sky
Flutters a brilliant butterfly;
I can hear a deep humming,
A bumblebee's coming!
He crawls deep into a flower near by.

Hello, Mr. Squirrel, so gay and so bold,
You laugh, although you pretend to scold.
Your face looks puffed,
For your cheeks are stuffed
As full of nuts as they can hold.

A crimson lizard I can see;
He basks in the sun and he watches me.
His bright little eyes
Show no surprise.
Perhaps he thinks I am part of the tree!

A sea gull floats through the blue of the sky.
He flaps his wings with a wild, shrill cry.
Just over the grasses
A dragon fly passes,
And locusts snap their wings as they fly.

Running along with a jump and a bound,
Comes Mr. Field Mouse. Now what has he found?
He looks so merry;
In his mouth there's a berry!
Then he disappears in his hole in the ground.

So now do you see why I love to lie
In a grassy nest on the hilltop high
And just keep still
And wait until
Such wonderful things come passing by?

—Ethel C. Brown, in Youth's Companion.

HOW A BIRD FLIES.

How many of us can answer the question: "How does a bird fly?" It seems simple enough, and yet it is a problem that the wisest in such matters have made a study.

The most prominent fact about a bird, in which it differs from every other creature, except the bat and insects—is its power of flying. For this purpose the bird's arm ends in only one long, slender finger, instead of a full hand. To this are attached the quills and small feathers on the upper side, which make up the wing.

Observe how light all this is; in the first place, the bones are hollow, then the shafts of the feathers are hollow, and finally, the feathers themselves are made of the most delicate filaments, interlocking and clinging to one another with little grasping hooks of microscopic fineness. An open wing forms a hollow on its under side like an inverted saucer; when the wing is forced down the upward pressure of the air, caught under the concavity, lifts the bird up, much as you hoist yourself up between the parallel bars in a gymnasium.

This explains how the bird keeps itself in the air, but how does it sail forward at such terrific speed? He never in this way could get ahead, and the hardest question is still to be answered. Now the front edge of the wing, formed of the bones and muscles of the forearm, is rigid and unyielding, while the hinder margin is merely the soft, flexible ends of the feathers, so when the wing is forced down the air under it, finding this margin yielding the easier will rush out here, and, in so doing, will bend up the ends of the quills, pushing them forward out of the way, which of course, tends to shove the bird ahead. This process quickly repeated by the flapping of the wings, results in the bird moving forward in its flight.

RURAL OPPORTUNITIES.

Boys and girls, as well as adults, who are fortunate enough to live in either small towns or in the country, have golden opportunities to make life easy for all kinds of dumb animals, because they live where the animals live. Not all of the humane propaganda should be distributed in cities, one can readily see. Animals used on the farm often suffer, when this could be alleviated, were there some boy or girl or older person who would make the effort to see that animals are given proper care and treatment.

Instead of viewing your fate as unfortunate because of the fact that you have to live in the country or in a village, you should be thankful that you were born so close to nature. You have opportunities to study wild life, and to help conserve it, that many city folks envy.

Humane clubs could well be organized in various rural communities and much helpful propaganda could be spread. A country store, church, or schoolhouse could serve as a meeting place. Humane literature could be distributed from small libraries found in villages, or from the rural school. Nature studies could be made by classes, whose pupils would not have to go far before finding something to study.

This is one way by which monotony can be routed, and the good part about it will be that you are helping to make the world lovelier and the life of dumb animals more comfortable.

Some day you may move away from the country—though it is to be hoped that you will not—and what you have learned about nature and all forms of wild life will be of considerable value. To say the very least, it will prove a pleasant, wholesome memory.

Decide that you will do something along this line in your community now. Do not wait until conditions seem more promising.

There is a great work for you to do in your community.

Approved Poultry Flocks.

With a view to improving the farm poultry in the Province of Manitoba, the Department of Agriculture at Ottawa has set about the establishing of approved flocks of Barred Plymouth Rocks. These flocks are intended to provide the source of improved breeding stock and hatching eggs for the use of farmers. This work is in charge of the Manitoba Poultry Promoter of the Live Stock Branch, who enters into agreement with farmers wishing to take it up. Under the agreement the breeder places his flock in the hands of the promoter who sees to it that only approved hens and cocks are kept for breeding purposes, and that only eggs from approved parentage and up to a required standard are incubated. Laying records are to be kept, and during the season the flock is to be culled by an official of the Department. These and other requirements are to be observed for a period of three years. The Poultry Promoter, during this period and afterwards, will assist in securing a market for the produce of the flock and render such other assistance as will enable the breeder to keep his flock up to a high state of quality and profit. The details of the scheme are published in Pamphlet No. 25 of the Department of Agriculture, which is available from the Publications Branch of the Department at Ottawa. This pamphlet also explains the principles and requirements of the Record of Performance "A" for poultry by which certificates of production are granted for trapnested hens that lay the required number of eggs in a year.

The Live Stock Market.

Top prices for steers were a shade lower in the week ending April 12 at Montreal and Toronto, when compared with the same date last year, but at Winnipeg there was no change and at Calgary and Edmonton they were 65 cents and 50 cents respectively, better, according to Dominion Live Stock Branch reports. Calves showed no change at Toronto, were a trifle lower at Montreal and at Winnipeg, although ahead of the previous week, but manifested an improvement at both Calgary and Edmonton. Hogs were steady at the previous week's prices at Toronto and Montreal, but were weaker at the three Western points. Lambs were up $1.00 in all the markets, compared with last year and unchanged as regards the previous week. Sales numerically all along the line were greater than last year, excepting calves, which showed a slight falling off. Up to date this year, the cattle billed through have been 34,103 against 20,517 for the same period of 1922, hogs 56,150 against 18,760, and sheep 15,755 against 18,559.

Before we know it we will be complaining about hot weather.

THE WEST FOR ANOTHER CROP.

The western farmer is always optimistic in the spring, and in spite of the talk of limited markets and other adverse conditions, Canadian farmers are preparing for a big crop again this year.

Fresh air and

Home Education

"The Child's First School is the Family"—Froebel.

An Old Fashioned Quality—Respect—By Carrie A. Ritter

"Mother had a hen-party yesterday," gleefully exclaims a young girl of sweet sixteen. "Mother had seven old hens here and you ought to have heard them cackle and seen them eat ice cream."

Many people might call this a cute up-to-date speech, but the mother of this same girl complains, "Mary is not respectful to me. She thinks I'm old, too, and I'll not be fifty-six until September. I don't see why she talks so about my age."

Casually observing these cases we wonder how much of this is training or rather lack of it. We notice the same attitude in the parents not infrequently in speaking of, or to, elderly relatives. Children are often allowed to be saucy to their grandparents or to their elders.

So it comes to us that the atmosphere in which a child is reared is responsible for his respect or disrespect for those older or in authority. Sometimes it is not the words so much as the tone in which the parent speaks of an elderly person that conveys disrespect.

There has always seemed to me to be a natural bond between children and very elderly persons. The little ones love stories which the older ones can tell delightfully. I know of a case in which a grandmother and her only granddaughter are chums. They camped together for a month when the rest of the family did not care to go. "Grandma had the time of her life," explained the girl, "only we did eat such a lot, both of us, it kept her busy. The young folks used to come over too. Grandma let us have all kinds of fun, and invited them to meals. She seemed to enjoy it as much as I did."

It was the same girl who said of her grandmother, "Grandma does not hear very well over the phone, in fact she does not hear it ring unless she is in the room with it, but don't hesitate to call up, there are some persons she can understand so she will answer if possible."

Does not this sound better than, "She's deaf as a post, what's the good of her trying to understand anything? No use your telephoning unless mother is home, or I am."

We wonder, yes, we wonder very much if the attitude of sons and daughters-in-law to aging widowed mothers has anything to do with the way young people speak of "Grandma."

"Old folks aren't wanted." You hear it often. Perhaps they are not, but sometimes it may be their own fault because years before they allowed themselves to speak carelessly of other elderly persons, forgetful of the law of suggestion. Let us be thankful for the mothers who taught us that filial respect and consideration were their due, that members of the generation older than themselves were to be treated with deference, loving care, and gentle thoughtfulness for their comfort, and that selfishness and disrespect for our seniors are neither more uplifting nor ennobling to our own characters than they are pleasant to the elderly people.

The Granary Converted Into An Elevator.

The average farm granary with bins eight feet or more in height, with a store-away attic, is usually not economic. A granary elevated on piers four feet or more and the bins extended to the eaves doubles the carrying contents at small cost. An elevator shaft with cups is a comparatively cheap equipment. A four to six-horse power gasoline engine is used for driving the belt to elevate the grain. Grain arriving at the elevator can be scooped into the grain dump at a rapid rate.

Reloading grain from bins by gravity into the alleyway in bags or otherwise, leaves only a few hundred bushels to be scooped out of the bottom. Reloading can also be accomplished through the elevator's operation and spouted into the grain tank. The examination of any grain elevator in your market town will give the basic ideas for remodeling a granary into a farm elevator for storage. A grain tank and the elevator reduce the bags necessary on the farm to the minimum. These fixtures are permanent, while bags are in a constant condition of deterioration.

A roof over the end of the granary elevator used for the dump for unloading, makes a good place for the grain tank to stand when not in use. A four-foot alleyway running through the building at right angles to the dump gives access to all the four bins. This economy of space necessitates an outside stairway. All the windows of the granary are removed except in the alleyway.

Grain which may be wet and inclined to heat can be changed to other bins through the elevator with comparative ease and given quite a good aeration.—J. McBride.

Feeding Geese and Goslings.

Geese, like ducks, require a large proportion of roughage in the feeding ration. This can be best supplied in the winter by the use of clover hay and roots. In summer, if given the range of a good pasture, a flock of geese require little else, unless extra rapid growth is desired. According to Dominion Experimental Farm bulletin No. 91, goslings require warmth and rest the first day. On the second day they should be placed where they will have free access to a plot of tender grass, or should be supplied with all the succulent green food they will eat, together with mash fed three times a day. If they are to be marketed as green geese it is advisable to feed mash heavily from the start. If they are to be kept as stock, use more hard grain, and when the goslings are strong enough, let them have the freedom of range on the pasture lands, and they will require only a light feed of mash in the morning and grain at night.

For fattening ducklings and goslings, feed a mash moistened to a crumbly state, consisting of 1 part bran, 2 parts shorts, 3 parts corn chop, 10 per cent. beef scrap, about 5 per cent. sand, reducing the green food to about half the quantity previously fed. Give plenty of water at feeding time. When geese have been on pasture all summer and are penned in the fall for fattening, feed them heavily on mash feed composed of what grain are available, corn being in especial favor, and feed occasionally whole grain to whet the appetite.

To Distinguish Pullets and Hens.

"I have difficulty at times in distinguishing pullets from young hens; what is the best plan to pursue?" writes a Northumberland county poultry raiser. A good way is that advised by the Dominion Poultry Husbandman, namely, to leg-band the pullets each fall, using, year about, the right leg and the left leg. When the pullets are being selected for keeping, put a band on the right leg of each pullet. In the next year put the band on the left leg. You will then know that the right-legged banded birds are hens. If preferred, the leg-band may be used only every other year, and the distinguishing marks would be the birds without and those with a band. The leg-bands are made of aluminum or other substance that can be fastened around the birds leg without trouble.

When Calves Can be Slaughtered for Food.

N. E. Ontario county—What is the age at which calves may be slaughtered?

Regulations adopted under the Meat and Canned Foods Act provide that no animal under three weeks of age may be slaughtered for food.

BRITAIN DEVELOPS HUGE PLANE CARRIER

NEW ENGINE IS BEING BUILT SECRETLY.

Contains Platform on Which the Fastest Machines Can Alight Safely.

The strides Great Britain is taking in aviation are evidenced by the construction now under way of a giant air engine said to be twice as powerful as any in existence, and the development of a naval airplane carrier of a revolutionary character.

The airplane engine, which will develop 200 horsepower a cylinder, is being built secretly on the outskirts of London. Air Ministry officials are reported to be confident that the new engine will make a transatlantic trip in less than twenty-four hours a possibility.

Originated in Italy.

The principle of the new engine was originated in Italy, but the British engineers have made improvements on it. If fitted into a bombing machine of ordinary type the plane would have an effective radius of 3,000 miles. Yet it is asserted that this powerful engine is no heavier than the average airplane engine.

The decks of the new airplane carriers are free of obstructions. The funnels are set on the starboard side of the vessels, making it apear as if an addition had been added to the vessels. The two upper decks are connected by huge lifts with the aerodrome deck, while the lower ones are equipped as workshops for making repairs. The flying deck also is fitted with a searchlight and a landing tower so that the planes can alight at night.

Has Platform to Alight On.

The carrier is equipped with an ingenious rotating endless platform for the planes to land and get off. The machine hops off in the opposite direction to that in which the platform rotates so that more speed can be attained. By the use of this platform the fastest plane can alight on the deck of the airplane carrier, for a machine which is going three miles a minute can be brought to a stop in a space of not more than forty feet.

The fact is that though the British are far behind France in the number of planes they have, they are devoting great attention to designing and constructing huge and powerful aircraft. Among the "hush-hush" planes being constructed by the Air Ministry is a machine capable of carrying fifty soldiers through the air at a speed of 130 miles an hour.

Art by the Foot.

Hurry is not characteristic of the present century alone; our ancestors were not always immune from the habit. The Dutch artist Vanderstraaten was a master in scheming out short cuts and saving time.

Vanderstraaten had little difficulty, it is said, in painting in a day thirty landscapes the size of an ordinary sheet of drawing paper. He would surround himself with pots of paint, each of which had its particular purpose—one for the clouds, one for the grass, one for the shadows. When he was ready to begin painting he called to his assistant, "Boy, a cloud!" and the lad speedily brought the desired pot. Vanderstraaten, with a thick brush, quickly transferred the clouds to the canvas. With the finishing strokes, he called: "There are the clouds; bring the grass!" And so it went, without a moment's waste of time, until the thirty landscapes were finished.

New Dish Washer.

For restaurant use an automatic dish washing machine has been given two sets of pumps and motors to avoid delay should one set break down at a busy time.

TORTURING SCIATICA

A Nerve Trouble Due to a Watery Condition of the Blood.

Fierce darting pains. Pains like red hot needles being driven through the flesh—in the thigh, perhaps down the leg to the angle—that's sciatica. None but the victim can realize the torture of this trouble. But the sufferer need not grow discouraged; the trouble is due to the fact that the nerves are being starved by poor, watery blood, and when the blood is enriched the pains of sciatica will disappear. As a blood enricher and purifier no other medicine can equal Dr. Williams' Pink Pills. They bring to the blood just the elements necessary to restore it to normal richness and redness. That is why so many sufferers from sciatica, and other forms of nerve trouble, have found relief through taking these pills. Mr. D. M. Anderson, Beachburg, Ont., tells what Dr. Williams' Pink Pills have done for him as follows:—"Some years ago I was badly afflicted with sciatica. I could hardly walk and suffered great pain when I did so. I went to a doctor, but his medicine did not seem to do me any good. A man who was working with me told me he had once been like that and that Dr. Williams' Pink Pills had made him all right. I began to take them, continuing to work, and the trouble disappeared, and I did not lose a day, although sometimes I suffered terribly. Later I had another attack, and again the pills came to my relief. Now I take three boxes of Dr. Williams' Pink Pills every spring and fall, and I have had no attack of the trouble since that time."

"You can get these pills through any medicine dealer or by mail at 50 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

Don't Kill the Earthworm.

To rid soil of weeds a roller has been invented into which a boiler feeds steam, which is injected into the ground for several inches through spikes.

It occurs to me that such a weed treatment will do a lot of harm by killing worms. The part performed by worms in rendering the soil fertile is not generally understood. Darwin estimated that worms, by swallowing earth for the sake of the vegetable matter it contains, and afterwards expelling it, bring to the surface as much as ten tons of earth per annum on an acre.

By boring, perforating and loosening the soil, worms make it pervious to rains and the fibres of plants. The stalks of leaves, twigs, straws, etc., they draw into the soil is no inconsiderable help. The cylindrical mass of earth voided by earthworms (called worm-casts) constitute one of the very best manures for grain and grass. Let alone, the worms throw these up in countless numbers; travelers have found them on lofty mountain heights, notably in the Sikkim Mountains of Northern India.

The earth without worms would eventually become cold, hard and barren. This actually has occurred in sections where the worms have been either accidentally or intentionally destroyed, and the fertility of the soil thus lost has been restored only when the worms have again collected and resumed their fertilizing work.—L. E. Eubanks.

Oldest Map.

The oldest map in existence is a piece of mosaic in a Byzantine church at Malaba, in Palestine. It represents part of the Holy Land, and is 1,700 years old.

There are some souls in the world who have the gift of finding joy everywhere, and leaving it behind them when they go. Their influence is an inevitable gladdening of the heart. They give light without meaning to shine. Their bright hearts have a great work to do for God.—Faber.

Minard's Liniment used by Physicians.

A Woman Barrister.

Miss Muriel Cockery, of St. John, is New Brunswick's only woman barrister practising law in that province. She was recently admitted to the bar.

History of Lights.

Here are some interesting facts in regard to the progress of lighting. The earliest form of lighting was a wood fire in a cave.

5000 B.C.—Torches or lighted splinters placed in holders of stone or clay.

300 B.C.—Lamps, made of brass or bronze, became highly artistic.

50 B.C.—Romans used rushes soaked in grease—forerunners of the candle.

300 A.D. — Phoenicians introduced candles in Constantinople.

400 to 1700 A.D.—The candle, tallow or wax, vies with lamps and lanterns.

1700 Oil lamps, with wicks, began to be used.

1780—Oil lamps were equipped with round wicks and glass chimney.

1800—Gas lighting perfected, but candle still most universal light.

1850—Discovery of petroleum, revolutionizing oil lamp lighting.

1879—Edison, apostle of light, produces incandescent electric lamp.

1885—Auer Von Welsbach produced incandescent gas mantle.

1895—Incandescent electric lights made with carbon filament, in growing use.

1922—Incandescent electric light, using Tungsten filament, in high state of perfection.

What will be the next?

NOTHING TO EQUAL BABY'S OWN TABLETS

Mrs. Georges Lefebvre, St. Zenon, Que., writes: "I do not think there is any other medicine to equal Baby's Own Tablets for little ones. I have used them for my baby and would use nothing else." What Mrs. Lefebvre says thousands of other mothers say. They have found by trial that the Tablets always do just what is claimed for them. The Tablets are a mild but thorough laxative which regulate the bowels and sweeten the stomach and thus banish indigestion, constipation, colds, colic, etc. They are sold by medicine dealers or by mail at 25 cts. a box from The Dr. Williams' Medicine Co., Brockville, Ont.

Twin Cities of the "Soo."

Canadian "Soo," with Union Jack,
And rock-ribbed mountains at her back,
  Is builded by St. Mary's Falls
  Where Nature's liquid music calls,
Across the Rapids to the west,
The eagle brooding on her nest,
  Another city welcomes you,
  With Stars and Stripes—the Yankee "Soo."

No fortress facing north or south;
No "Bertha" lifting morbid mouth;
  No frontier with police patrol;
  Each city sees the other's soul.
The peace that for a hundred years
Has triumphed over all our fears
  Shall cover for a thousand more
  Atlantic and Pacific shore!

Republic and Dominion stand
As friend to friend, with heart and hand,
  Across the Border, to and fro,
  Fond lovers and their sweethearts go.
Through north and south, from east to west,
Not "hate," but "song of love" is best;
  All hail, Twin Cities of the "Soo,"
  The world shall go to school to you!

—Joseph Dutton.

MONEY ORDERS.

Dominion Express Money Orders are on sale in five thousand offices throughout Canada.

An Arch of Triumph in Ypres Salient.

Preparations are in an advanced state to erect an Arch of Triumph at the Menin gate to commemorate the feats of British arms in the Ypres salient, according to the Ypres Times. It is learned that agreement has been reached with the dominions and India on the matter, and that the memorial will be erected to the memory of all who fought in the salient, but will include a special reference to the "missing," whose names will be inscribed on it, as they cannot be, of course, inscribed in the cemetries.

The arch was particularly designed under the supervision of the cabinet committee for battlefield memorials, and was not agreed to until it satisfied them that it was a worthy memorial from every point of view. It is impossible to say, of course, when it is likely to be completed. It will probably take something like two years to complete, but the contract for its erection is to be signed at once.

A PLAIN TALK.

We all know the man and woman in business who, somehow, never seem to succeed at anything—never get on.

What's the matter with them? Are they unlucky, or is it that their hearts are not in their work?

Some people expect mastery without apprenticeship, knowledge without study, wealth without work. They live in dreams and reveries and vain regrets for the past, never grappling with the present and making the most of it. They waste their time and energy, and weaken their initiative, by constantly forming plans and resolutions which they never carry out.

They have no strong purpose running through their lives, the one thing which can unify and give strength and meaning to their faculties. They think that if they only keep on working, even if they have no definite goal in view, they will, somehow, arrive at success.

They are afraid of the new, the untried. They want other people to do the experimenting, while they get into ruts and cling to the old, the conventional, and the out-of-date. These are a few reasons why some don't get on.

The Cartoonist.

Seated on the deck of the ocean liner, the cartoonist amused himself by drawing pictures of the different passengers. A few months before he had been employed on a Chicago newspaper; now, a professional cartoonist no longer, he was on his way to the Phillippines, a missionary of the gospel. His vision had been as swift as it had been bright.

A number of notable people were making the trip, and among them were the captain of an American battleship and three or four millionaires with their wives. One of the women, becoming enthusiastic over the cartoonist's ability, asked him whether he would draw a picture of her husband. The cartoonist complied graciously, and while he was at work the wife of the captain watched with interest.

"Oh," she exclaimed at last, "I suppose you are one of our great American artists on your way to the Philippines for new ideas! What a wonderful thing it is to be so gifted! I suppose you make barrels of money?"

"No, madam," the cartoonist replied, "I am going to the Philippines as a missionary. I have given up my career as an artist."

The woman regarded him first in astonishment, then with reproach. "The very idea!" she exclaimed. "To think of a young man like you with all of your ability throwing his life away on a lot of worthless heathen. I can hardly believe you're serious! Really you are joking, aren't you?"

Eight years passed, and the cartoonist and his wife were sailing for home on doctor's orders, for the climate had proved too much for the woman. The lives of both were wrapped up in their work; it was hard for them to leave the natives, who had come to depend on them, but there was no help for it.

A great crowd of Filipinos came to the dock to see the missionaries off. Tears were running down the faces of many of them. All were sad and made no efforts to hide their feelings. As the steamer pulled out thousands of hands waved the missionaries good-by.

The cartoonist and his wife stood silent together on the deck; their eyes were wet, and their throats felt tight and strange. If the captain's wife had witnessed that scene, would she have said that the cartoonist's life was wasted?

What Music the Boys and Girls Wanted to Study.

With the assistance of the Rotary Club and other public-spirited bodies, plans were made in a small city to give the children of the masses instruction in music at a nominal cost by means of music classes in connection with the schools. A survey of several schools revealed an interesting set of desires. When asked the particular kind of music study they would like to take up the pupils in one school reported as follows, according to a correspondent in Musical America:—101 for violin, 58 for piano, 57 for singing, 32 for cornet, 11 for drums, 10 for mandolin, 8 for saxaphone, 2 for guitar, 2 for 'cello, 2 for clarinet, 2 for ukulele, 4 for trombone.

In another school the pupils responded as follows:—73 for violin, 47 for piano, 32 for singing, 10 for drums, 1 for mandolin, 10 for saxaphone, 1 for guitar, 2 for banjo, 2 for clarinet, 1 for bass horn, 1 for trombone, 1 for flute, 1 for xylophone.

HAD TO FIGHT TO GET HIS BREATH

Reed Declares Gases Were So Bad He Nearly Choked at Times.

"The best I can say is not half good enough for Tanlac," states Frederick E. Reed, 286 Roxborough Ave., Hamilton, Ont., well-known business man.

"Last winter grippe and tonsilitis confined me to my home for weeks and left me so thin and frail it looked like I could never get back to my business again. I would choke up with gas until I had to fight for breath, was so nauseated I could scarcely retain a thing, and pains in my stomach and sides would double me up. I could scarcely sleep a wink, and my hands were so trembly I couldn't even arrange my tie.

"However, the Tanlac treatment suited my case so well it ended my troubles, increased my weight, and fixed me up to where I felt as fine as I ever did. I feel right all the time now, and haven't missed a day from my business since I finished the treatment. Tanlac has no equal."

Tanlac is for sale by all good druggists. Take no substitute. Over 37 million bottles sold.

Butterflies' Eye Spots.

What do the eye spots on butterflies' wings mean The naturalists say frankly, "We do not know." It is thought that these eye spots may have some utilitarian application. They form one of the most intricate of all natural designs.

The fact that butterflies have been captured with their eye spots pierced, as if from the attack of birds, has been used as an argument in favor of the view that they must be "protective markings," imitating eyes, because birds strike at the eyes of their victims.

But this suggestion is hardly regarded as satisfactory. Among butterflies the most striking examples of eye spots are found on the under surface of the wings.

Minard's Liniment for sale everywhere

Good Model.

Tommy entered the village store with an assured air, and said to the man: "I want a lamp globe, and mother says she would like it as strong as the bacon she bought here yesterday."

Extremely Plain.

Customer—"Which way to the hosiery department, please?"

Shopwalker (an ex-soldier)—"Right turn at the next aisle, sir, forward about twenty paces, left incline, forward, left turn, halt, and it's there."

Cuticura

Keeps Your Skin Fresh And Clear

The Soap cleanses and purifies the pores, the Ointment soothes and heals any irritation, redness or roughness. Treatment: On retiring smear the affected surface with the Ointment on end of finger. MINARD'S "KING OF PAIN" LINIMENT

MRS. DAVIS NERVOUS WRECK

Tells Women How She Was Restored to Perfect Health by Lydia E. Pinkham's Vegetable Compound

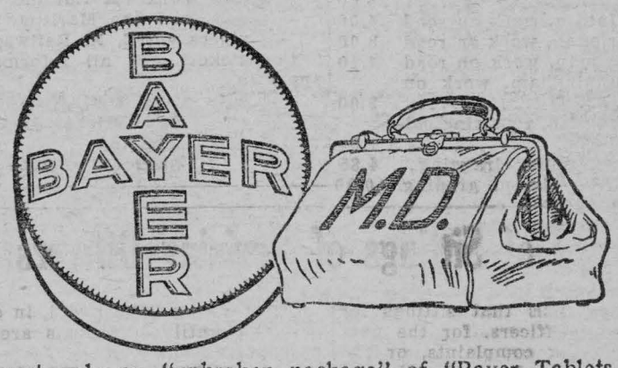

Winnipeg, Man.—"I cannot speak too highly of what Lydia E. Pinkham's Vegetable Compound has done for me. I was a nervous wreck and I just had to force myself to do my work. Even the sound of my own children playing made me feel as if I must scream if they did not get away from me. I could not even speak right to my husband. The doctor said he could do nothing for me. My husband's mother advised me to take the Vegetable Compound and I started it at once. I was able to do my work once more and it was a pleasure, not a burden. Now I have a fine bouncing baby and am able to nurse her and enjoy doing my work. I cannot help recommending such a medicine, and any one seeing me before I took it, and seeing me now, can see what it does for me. I am only too pleased for you to use my testimonial."—Mrs. Emily Davis, 721 McGee Street, Winnipeg, Man.

Lydia E. Pinkham's Private Text-Book upon "Ailments Peculiar to Women" will be sent you free upon request. Write to the Lydia E. Pinkham Medicine Co., Cobourg, Ont. This book contains valuable information. C

ASPIRIN

UNLESS you see the name "Bayer" on tablets, you are not getting Aspirin at all

Accept only an "unbroken package" of "Bayer Tablets of Aspirin," which contains directions and dose worked out by physicians during 22 years and proved safe by millions for

Colds	Headache	Rheumatism
Toothache	Neuralgia	Neuritis
Earache	Lumbago	Pain, Pain

Handy "Bayer" boxes of 12 tablets—Also bottles of 24 and 100—Druggists.

Aspirin is the trade mark (registered in Canada) of Bayer Manufacture of Monoaceticacidester of Salicylicacid. While it is well known that Aspirin means Bayer manufacture, to assist the public against imitations, the Tablets of Bayer Company will be stamped with their general trade mark, the "Bayer Cross."

Surnames and Their Origin

BRENTWOOD.

Variation—Brantwood,
Racial Origin—English.
Source—A local name.

Those who are at all familiar with the so-called Scottish dialect should have no great difficulty in penetrating the original meaning of this surname.

The name, however, is not necessarily Scottish. It is a fact not generally known that this so-called Scottish dialect is by no means a dialect of English or in any sense a corruption of English speech, but is, in reality, a full-fledged tongue in itself, coming down in a straight line from the Anglo-Saxon and Danish tongues, which were spoken in the north of England and the Scottish lowlands prior to the Norman invasion. It is also a tongue in which the Anglo-Saxon strain is purer than in modern English, the majority of its words showing less change from the old Anglo-Saxon spelling and pronunciation.

Thus the Scottish word for "burned" or "burnt" is closer to the old Anglo-Saxon "brennan" than is the modern English word. And it is from this word "brennan' that the first element in this family name comes. Brentwood simply means "burnt wood." The principal place of that name, however, happens to be in Essex, far from Scotland, and the explanation is that it received its name before the Anglo-Saxon form of the word changed.

KERSTED.

Variation—Kiersted, Kjersted.
Racial Origin—Danish and English.
Source—A locality.

As an English product, this family name traces back through the name of a place to the days when the hosts of the Danes overran the entire northeastern section of England.

The eastern coast of North England and the Scottish Lowlands are marked to-day by many names of Danish origin, and there is no small proportion of Danish blood in the people who have dwelt in these sections for many centuries. And, as might be expected, a search of the records of the old towns and parishes in these sections brings to light a fairly heavy proportion of family names which trace either directly or indirectly to Danish sources.

Kiersted was a place name before it was a family name. Therefore it does not necessarily indicate that those who bear it have any Danish blood in their veins, though it is not unlikely that they have. The place name is taken from two Danish words, "kier" and "sted," the former meaning a "place," "village" or "town," literally a place where men dwell. "Habitation' 'is probably the best word to express the meaning.

BOARD OF EDUCATION

The regular meeting of the Board of Education was held on Monday in the Public Library.

Present—J. L. Casselman, Thos. Coligan, W. J. Fetterly, Mrs. Ashton, J. H. Meikle, A. H. Hunter, Mrs. Hilliard.

Accounts amounting to $1935-17 were passed.

Letters were read:—

From Principal Froats re date for closing M.C.I. in June. From Principal Froats, containing list of supplies for Entrance Examinations. From Principal Froats containing list of supplies needed for Departmental Examinations. From Principal Froats, showing an enrolment for April of 133 and average daily attendance of 129.

A. H. Hunter, Mrs. Ashton, That Principal be authorized to order the requisite amount of supplies for examinations.

The annual requisition on the Counties Council was read showing a total levy of $5632.19.

J. H. Meikle, A. H. Hunter, That the requisition on the Counties Council be accepted and forwarded to the County Clerk—Carried.

The Public School Inspector's report was read.

J. H. Meikle, Thos. Coligan That this report be received and filed.

A letter was read from Mrs. Isabel McLaughlin, thanking the Board for their expression of sympathy in the form of a beautiful wreath sent in memory of the late Dr. McLaughlin.

The Secretary reported a policy for $2800 on the west Public school building as expiring this month and that a new application is required.

Thos. Coligan, A. H. Hunter, that this policy be renewed and a new application for the same amount be signed by the chairman and an order drawn for the premium of $28.

A letter was read from the Fisk Teachers' Agencies, Toronto, re the engaging of teachers.

The auditors' report for 1922 was read.

A. H. Hunter, W. J. Fetterly, That this report be accepted as read.

J. H. Meikle, A. H. Hunter, That the Secretary submit new contracts to the teachers of both schools at the same salaries.

Mrs. Ashton, A. H. Hunter, That Principal Fetterly be authorized to act as assistant examiner at the Departmental Examinations.

School attendance officer Baker gave monthly report.

WILLIAMSBURG COUNCIL

Pursuant to adjournment the Council met at Boucks Hill on Saturday, May 12th, 1923. Members all present. Minutes of previous meeting were read and adopted. The Counties Treasurer was authorized to strike off of the list of uncollected taxes against R. P lot 13, Con. 8, same having been paid. A petition signed by Ernest Casselman and others asking to have the Casselman branch of the Casselman-Dawley drain cleaned out or improved was presented and asking that G. L. Brown be employed to prepare the necessary report. The ptition was granted and G. L. Brown notified to prepare a report accordingly. The Clerk was authorized to notify Reuben Carkner to complete the payment of unpaid taxes for 1922 against lots 13 and 14 Con-6 by May 21st, otherwise the necessary steps would be taken to enforce payment.

The following accounts were passed:

Adam Reddick, ground rent for stone for 1923	$ 4.00
N. L. Tupper, grading	2.00
G. F. Carr, work on E. T. L. and given road	7.45
John Bowman, work on 3rd Con. H. L.	6.00
Orrie Bouck work on road	4.50
Melvin Dillabough, 49 rods wire fence	9.80
Wm. Lane, work on road	2.25
Jeff Swerdfeger, dragging road	10.00
W. A. Carr, dragging road, 7th Concession	5.00
Stanley Sadlemire, dragging road	5.00
Geo. A. Casselman, work on road	9.70
P. M. McIntosh, work on road	8.55
Chas. McMillan, 25 rods wire fence	5.00
C. M. Whitteker, cedar and work on bridge	4.00
H. A. Gallinger, grading	6.75
Isaiah Shaver, work on road	6.75
Fred Cunningham, freight on grader, jaws and other supplies	14.05
Grant Coughler, dragging	9.00
Adam Coughler, grading, hired help, N. T. L.	28.00
L. M. McIntosh, work on road	4.00
Jacob Garlough, work on road	8.00
E. J. Herriman, work on road	4.10
James Cunningham, work on road	9.00
N. C. Casselman, repairing culvert	1.00
C. W. Colquhoun, dragging	4.85

The Council adjourned to meet at Boucks Hill on Saturday, June 9th, 1923, at one o'clock p.m. as a Court of Revision on the Assessment Roll and other business.

M. S. BECKSTEAD, Clerk.

MRS. AMELIA SCHULTES

The death occurred at her home here on Saturday, May 12th of Mrs. Amelia Schultes, in her 76th year, after a few days' illness of pneumonia.

The late Mrs. Schultes was born in Williamsburg township, a daughter of the late Cephrenus Casselman. In 1875 she was married to Rev. Augustus Schultes, who predeceased her three years ago. She was well and favorably known throughout the township where she resided until recently, when she came to reside in Morrisburg.

She is survived by three brothers, Martin Casselman of Jersey City; Cephrenus of Montreal and Charles of Syracuse, N.Y.

The funeral service was held at her home on Monday afternoon at 2 o'clock, Rev. Isler of Williamsburg officiating. Interment was made at Riverside.

Success Is Guaranteed For Your Baking

QUAKER FLOUR must be not only the *best* in quality, but it must *always be the same.* We see to this by hourly tests during the milling process.

But laboratory tests are not enough. Each day's milling is put to a practical test by our Master Baker. It must always measure up to the exact Quaker standard before it can go into the sack with the Quaker on it.

All "chance" is taken out of your baking when you use Quaker Flour. "The happy baker uses Quaker."

Notice of Sittings of Revising Officers

TAKE NOTICE that sittings of the Revising Officers, for the purpose of hearing complaints, or appeals, with regard to the Voters' Lists to be used at the election of a mmber of the Assembly pending for the Electoral District of the County of Dundas, will be held at the following times and places, by the Revising Officers named, the name of the Clerk to the Revising Officer, his address, and the last day for filing appeals being also set out:—

The revising Officer will, in every case, sit until all appeals are disposed of.

AND FURTHER TAKE NOTICE that any voter who desires to complain that his name, or the name of any person entitled to be entered on the said list, has been omitted from the same, or that the names of any persons who are not entitled to be voters have been entered thereon, may, on, or before the dates set out above, respectively, apply, complain, or appeal to have his name, or the name of any other person entered on, or removed from the list.

AND FURTHER TAKE NOTICE that such appeals must be by notice in writing, in the prescribed form, and shall not include complaints, or appeals, as to names entered, or sought to be entered on the list for more than one polling sub-division. They must be signed by the complainant, in duplicate, and given to the Clerk of the Revising Officer, or left for the Clerk at his address stated above.

Dated this ninth day of May, A.D., 1923.

And further take notice that all persons are required to examine the Voters' Lists, Parts 1 and 3, 1922, to ascertain that their names are correctly entered thereon.

E. J. REYNOLDS.

Mother and Her Baby Are Relieved of Eczema

Mrs. Peter A. Palmer, Salt Burn, Sask., writes:

"Dr. Chase's Ointment has completely relieved me of eczema and piles. I also used this Ointment for my baby, who broke out in eczema. A few applications were all that was necessary in her case. Dr. Chase's Ointment has been worth a hundred dollars to me—before using it I had spent a great deal more than that in unsuccessful treatment from doctors. We have also used Dr. Chase's other medicines, the Nerve Food having restored my health after suffering from severe nerve trouble when a girl."

DR. CHASE'S OINTMENT

60 Cents a box, all dealers, or Edmanson, Bates & Co., Ltd., Toronto

ECZEMA You are not experimenting when you use Dr. Chase's Ointment for Eczema and Skin Irritations. It relieves at once and gradually heals the skin. Sample box Dr. Chase's Ointment free if you mention this paper and send 2c. stamp for postage. 60c. a box; all dealers or Edmanson, Bates & Co., Limited Toronto.

Martha Jennie's N'Egg Did It

BY MINERVA L. GUTHAPPEL.

PART II.

The last day arrived. The old farm wagon was ready in the barnyard to take the fresh-air folk to the station. On the front porch were stacks of daisies, buttercups, sweet peas, geraniums and late roses. Each child's bouquet was marked with its owner's name and beside it was a big bag of cookies, all to take home to the city. The children were watching their playfellow, Rover, at his loved pastime of chasing stray hens back to the barnyard. One hen, with a frightened squawk, landed directly in front of Martha Jennie, who, unable to run because Jimmy held one hand and Alice Gordon the other, screeched as the hen flew toward her, but her cry was lost in amazement as the creature stopped, squatted, cocked her head on one side as if to say, "are you watching?" then turned and marched proudly away, telling the universe that she had deposited directly in front of our little skeptic, a beautiful, warm white egg. The miracle had happened! Jimmy was right!

Martha Jennie dropped to her knees, crying in ecstacy, "It's a n'egg! My n'egg! The chicken *gived* it to me!" She lifted it in her small hand and kissed it again and again, while the delighted children somewhat enviously clustered around her crying, "Now! Eggs don't grow in boxes. The hen showed ye, didn't she?" Martha Jennie scorned to answer, clasping her egg tighter. Her whole little world of joy and knowledge was contained in one beautiful white egg. All the way to the station, as well as after they were comfortably seated in the train, she held her treasure tightly in a very moist little hand. To none of the group had so great a gift been given.

Edward Le Ferver sat in sullen silence in the second chair of a local train's parlor car. He had missed the express train in which his reserved drawing room was gaily riding without him. The drawing room on this train was taken, as he supposed, by some blissful newly-weds. To have to travel in a chair on a slow train for five or six hours was an outrage for a person of his importance.

The day was hot and the car was dusty. From time to time he eyed the door of the coveted room resentfully. If he had that and could sleep through this heat, it would not be so bad. He was accustomed to having his way. Not to have it, hurt him sorely.

As the train stopped, he idly looked from the window. A troop of children, one lame, all of them buried under masses of daisies, buttercups and paper bags, were shouting goodbye to a farmer and his dog, who were waving to them, one his hat and the other his tail. With a shrug, our uncomfortable gentleman muttered thanks to someone or something as the children's voices receded into the crowded day coach in front but the thanks turned into something less pleasant when the conductor ushered into the parlor car a red-faced, perspiring, much-worried woman, who held by one hand a small boy and by the other a very small girl. At the conductor's suggestion she deposited the two children in the two vacant front chairs. Then she heaped upon each child its own particular bag of cookies and its own precious bouquet of buttercups and daisies. It was noticeable to a close observer that in the left hand of the little girl there was tightly clasped a large white egg.

"Stay there!" said the worried woman firmly, "and don't ye be running around the car and annoying people. I've got to get into the other car. Alice Gordon always gets so sick on the train and there's so many of them sure I can't leave them alone. You two can take care of yourselves, I hope. Here ye are. Now be good, Jimmy, and take care of Martha Jennie."

With the last word, she bounced through the door. Jimmy cautiously unwrapped himself from his flowers and bag, gathered up Martha Jennie's flowers and bag, deposited them in the chair he had vacated and sat down beside the big-eyed owner of the egg, who with her free hand clutched him for security in this new strange world. Silently they ate their cookies and gazed from the window.

Far down in the car a man snored. Half way up the car a fidgety maiden lady rattled a newspaper. The only other visible passenger switched his chair with its back to the children.

"It's been a deuce of a day for me," this passenger was soliloquizing, "ever since the telegram came to go up to the capital on the next train for examination by the Federal high-cost-of-living commission." He chuckled. "They had nothing on me. I had the law on my side. My hundred million eggs in cold storage will stay there until next winter. I'll unload at my own price. Fools!" he went on, "did they think I'd risk everything without law on my side?"

While he was still enjoying his mental chuckle the drawing room door opened and a lady, not a young couple, came out and turned the corner of the observation platform. She looked familiar. Was it?—it *was!*—Gertrude Vale. In a flash he was out of his seat and following her to the platform.

"Gertrude!" he said breathlessly, "Are you coming or going? Are you alone? Why didn't you let me know you were up this way? Why——"

Icily the handsome girl answered him, looking straight into his eyes, "Edward, I've come from Ottawa. I was there when you were examined. I went purposely."

"You! There! Is not that strange business for *you* to be in? Following me around as if I were a——"

"I am not sure you are not. And—since we have met here, I will return the ring," and she slipped the shining jewels from her left hand. "A man who can keep eggs from thousands of hungry children and sick mothers, who can gamble with a necessity of life *just to make money*, can never spend that money on me. You told me your business was 'important' and 'secret.' Now I understand. Your business is 'secret' and—criminal. And so are you. This ends our friendship—my respect, even."

"But Gertrude! You don't understand business! All men are doing it. I was called here to-day only because I'm successful. My jealous competitors got me into this trouble. Let me explain."

He was as pale as death. This girl was all the world to him.

Steadily she answered: "The explanation was made to-day. I understand business *principles*, sir—the fundamental principles which honorable business understands and follows. . . . . I wish you good day!"

"Good heavens! she is in earnest!" said the dismissed one, under his breath. Her diamond ring dropped to the floor, an alert porter picked it up and gave it to him while he dazedly watched her glide down the aisle back to the drawing room. He took the ring, gave the porter a dollar and sank wearily into a chair, his jaw set. Gertrude or eggs! Well, he would make it Gertrude *and* eggs or nothing! No woman should rule him if he knew it!

(To be concluded.)

From the school histories of Japan, it is reported, all militaristic ideas have been cut out. Lessons are given to teach children to understand in a friendly way other nations of the world.

There are in Canada some six species of spruce. These differ considerably in qualities and are distributed throughout the entire Dominion in varying mixture. Five of the species are of commercial importance and, as a group, they form the most important part of Canada's forest resources.

Lifebuoy may be safely used on the tenderest skin.

It is wonderfully cleansing for little hands, faces and bodies.

Lifebuoy babies have beautiful healthy skins.

The Woman of To-Day

FORGETTING OUR MUSIC.

"The money I spent on that girl for music lessons!" her father complains, "and now she cannot play the simplest piece. It's always, 'Oh, I'm all out of practice!' "

And the bride of a year, similarly: "I haven't time to keep up my music." Yet it was one of her chief attractions, a valuable "property" in interesting her good husband. Really, it seems veritably dishonest. He might argue, "When I asked you to marry me, I thought you were musical; you have deceived me."

Of course, nobody does say that, I suppose, in so many words, but the little feeling of disappointment or resentment is nevertheless there. "She wanted to please me before we were married; now she doesn't care."

And for her own sake, what a loss! a little music does soothe the irritations of life. What an air of well-being and comfort the house has if one is playing or singing something sweet. It is a sure sign that that person is not fretting or worrying, at least. And, of course, the mood is contagious.

And how the children care! An elderly friend told me that her grown up children didn't give a fig for all the embroidery she had put on their clothes, but that they were simpuly delighted that she could sing or play a little.

Just the other day a woman was talking about how hard it was to keep her little girl practicing the violin. She had threatened that if her daughter did not take more interest the violin would be handed over to the little brother.

"You know," she continued, "I feel as though I must have one of my children play the violin. My father used to play it. If he didn't play, things were not going very well with him. But he did play a great deal, and we children understood his humor and used to caper around. These were the happiest hours of my childhood."

An acquaintance who does not play anything pretentious, but just the sweet old melodies, tells me that often in the evening she goes in to the piano in the half-light and plays for an hour or more. After a while she usually finds that her husband, who is a busy lawyer, has come in, and is day-dreaming at the other end of the room; and then her big son, who was wounded in the war, wanders in, saying, "I love to hear you play, mother dear."

Music has very practical uses, too. I know a mother who, when the children get into quarrelsome states, exclaims: "Let us sing!" or sometimes she sings without exclaiming, and it is wonderful how soon the air clears.

Few are especially gifted musically, but just a few are there who cannot learn at least to play hymns, simple folk songs and a little dance music. Money and nerves aplenty are wasted in acquiring a musical education when no talent exists. But everyone should be taught the rudiments of music, at least, and much more if talent warrants it.

Having acquired some facility in playing or singing, it is only good business to keep it.

Time! Ten minutes a day will keep fingers and brains in pretty fair condition musically. But it must be every day, and exercises, scales and "pieces" must all be included. Ten minutes a day. Yet how many half-hours of each day are spent worthlessly! Even when work is crowding, an apparently important thing may well be dropped in favor of that ten minutes' practice.

Every home needs music. It soothes, sweetens and adorns.

WHAT IS CLOTHING ECONOMY?

Economy is an important word to the majority of people. When this word is mentioned the first question that is brought to mind is: How much money is saved? However, in considering the relation of economics to clothing, we must not only consider the money which is saved through wise selection, but also consider economy of time and strength which results in using the shortest and best methods in constructing a garment or in making the household furnishings.

Spring time always brings with it the problem of replenishing the wardrobe to last through the busy summer months, and frequently the task of making fresh curtains or draperies to add a touch of newness to the home. Of course, the housewife is busy and must use the quickest methods in doing her spring sewing.

One of the most important steps towards greater efficiency in sewing is a more adequate understanding of the sewing machine which will result in using quicker methods of work. To many women the box of machine attachments means very little more than the equipment which comes gratis. These attachments, when properly used, will save time, money, and produce better workmanship.

French seams can be made with the hemmer. This requires but one length of thread for the seam and also insures the seamstress that there will be no raveled edge on the right side of the garment.

For children's clothing, binding is indispensable as a trimming, and as a time-saver in making buttonholes. Another useful attachment which is closely connected with the binder is the bias cutting gauge. Its purpose is to cut narrow bias or straight pieces evenly. It is true that bias tape is on the market, but it is much less expensive to prepare it at home. Then, too, perhaps the store does not have just the right color and quality and this little gauge will save endless measuring.

Commercial patterns are a big item to the woman who does the family sewing. The woman who has learned to adapt a pattern to other designs does not only save money but also time and trouble. If she has learned to fit properly and alter her pattern to fit, then it is a simple task to change the design of blouse or dress, using a foundation pattern for this purpose.

The housewife who makes definite plans for her work accomplishes more than the housewife who works without a schedule. The same principle holds true with the housewife who shops with a definite aim. It is necessary for the efficient home-maker to take inventory of the clothes closest and linen closets so that she can plan regarding the number, kind and quality of garments and materials to be purchased. Then she can wisely apportion the amount of money for each item.

To sum up, we might state that further education in the fundamental principles of sewing in textile selection, and in the best methods of work will result in a saving of time, energy, and money for the home-maker.

Do you know how shot are made? Surface tension causes any liquid which is moving as fast as gravity can make it, to assume the spherical form, as raindrops or shot. Shot are made by pouring molten lead from a shot-tower and receiving them in water. The water prevents deformation. Very simple, isn't it?

A celebrated singer was in a motor car accident one day. A paper, after recording the accident, added, "We are happy to state that he was able to appear the following evening in four pieces."

WINS 52-MILE PRAM RACE.

Five mothers pushed their perambulators, complete with babies, from Big Ben, London, to Brighton, a distance of fifty-two miles, recently, in response to a challenge by one of the mothers. Mrs. Groom, of Eastbourne, the winner, seen in the picture, finished in 12 hours and twenty minutes.

Sunlight.

The value of sunlight as a giver and preserver of health has long been known, but the exigencies of city life frequently cause it to be forgotten or ignored. Many Greek and Roman historians and medical writers tell of the beneficial action of the sun's rays, and we know that sun parlors were common in the houses of the rich in ancient Rome. Moreover, there are numerous proverbial expressions that reveal the popular belief in the efficacy of sunlight in preventing or curing disease. Such is the saying, "Where sunlight enters not there the physician goes."

In the crowded cities the necessity of housing many people in contracted quarters has shut out the sunlight, though modern sanitary science is now seeking to remedy the evil. In business quarters, however, the evil is constantly growing, and in many offices it is impossible to work at all without artificial light.

Infants especially need sunlight; the pity is that they are generally wheeled about in baby carriages with only the face exposed, so that when the sun does touch them it shines directly into their eyes and does them harm rather than good. Their little bodies should be systematically exposed to the sun every day that it shines. The baby should be taken to an open window—sunlight coming through a closed window loses much of its efficacy, since the chemical rays pass with difficulty if at all through glass,—and then the legs and arms, one at a time, the chest and the abdomen and finally the back should be bared and exposed to the direct rays of the sun for three or four minutes each. Except at first in very cold weather the exposure can be made without danger and to the great benefit of the child.

A Cool-Headed Little Girl.

The coolest act I ever saw, says Mr. Rex Stuart, a railway engineer, in the American Magazine, was some months ago on the run between New York and Albany. We were a little late and were traveling fast when I saw two little girls on the track straight ahead. A freight was coming north on the opposite track. One of the girls saw the danger and jumped clear. The other was caught.

There is only six feet between the rails of the two tracks, and she was trapped in there. She turned sidewise, then put her hands straight down at her sides, shut her eyes and stood perfectly still. I looked back after we hit the curve, and she was still standing there as stiff as a poker, waiting for the trains to pass. Of course, it would have been better if she had dropped flat on the ground, but she scarcely had time to do that. It was a very cool-headed deed as it was.

Not Sure of Result.

Mother—"All the dear child needs is a course in elocution to finish her off."

Grouchy Uncle—"Yes, electrocution might do it, but I'm not sure."

Radio Feats.

Since London has been "listening in" to American radio concerts other instances of receiving from distant points are becoming known. Three stations in the Hawaiian Islands can hear music and speech broadcast from Troy, New York, a distance of fifty-five hundred miles. The station at Troy carried on a conversation with Calgary, Alberta, for more than sixty minutes. Those two stations are a little less than two thousand miles apart, but the difficulties of conversation over land are such that the feat is not at all common and probably will not be usual for some time to come.

Now is now-here, but to-morrow's no-where.

"Our ideals are our possibilities." If our motive is fine, our bearing and aspect will not fail to declare the fact.

"I Have Walked Out."

I have walked out—to open air and sun,
Upon my jailer, wintry Old Despair,
Have turned the key, and left him fretting there—
In my late cell! So, now there can be none,
Not youth himself—more blessedness has won;
Although he be the springtime's nearest heir,
I, being old, shall gain the greater share
Of her bright treasure—not by youth outdone.
For I have what I gather; grown so wise,
After these many wasteful years, I catch
And hold the fleeting thing called joy, and snatch
My pleasures from the moment, ere it flies . . .
I have walked out—to vernal sun and air,
And turned the key on wintry Old Despair.

—Edith M. Thomas.

Puzzling the Postman.

Postal officials in India are frequently puzzled by the strange methods of addressing letters adopted by natives.

The following must have given the postman a considerable amount of trouble, especially as it was written in an almost unreadable hand:—

"To the one inseparable from my heart, the fortunate Babu Sibnath Ghose, having the same heart as mine. From post-office Hasnabad to the village of Ramnathpur, to reach the house of the fortunate Babu Pravanath Ghose, district Twenty-four Perganas. Don't deliver this letter to any person other than the addressee, Mr. Postman. This is my request to you."

Quite Simple.

The pale-looking passenger had shown signs of nervousness all through the voyage.

Approaching the captain one day, he asked:

"How far are we from land, captain?"

"Oh, about three miles!" replied the official.

"Only three miles?" said the passenger. "Then it's funny we can't see it."

"Oh," returned the skipper, "that's because the water isn't clear enough!"

It is not the hours that you put in that count; it is what you put into the hours.

CHANGES IN ORGANIZATION OF TORONTO GENERAL HOSPITAL TO BE RECONSIDERED

Government Committee Brings in Eighteen Recommendations Affecting the Administration of the University of Toronto.

The special committee appointed by the Provincial Government to investigate the administration of the University of Toronto has completed its task. Its report contains eighteen recommendations as set forth in the summary below. Some of these recommendations have a direct bearing upon the welfare of Canadian citizens as a whole. Research work should have generous financial support. Splendid results have already been obtained from the efforts of scientists in the university. The method of liquifying helium, the development in the realm of anaesthesia, and the discovery of a cure for diabetes are recent instances.

The encouragement of extension work throughout the province is also strongly recommended. Many a man and woman deprived of early education has been helped by extramural courses. Highly trained university men visit numerous centres throughout Ontario; summer schools are held and correspondence courses bridge the gulf to higher education. This work, in the opinion of the committee, deserves the Government's generous aid.

It has long been the opinion of educationists that first-year university work should be undertaken by the high schools and collegiate institutes of the province. The advantages of this change are apparent to every one. Students would spend an extra year under the care of their parents and of the teachers who know them best. They would thus become more matured before entering upon the work of the university and therefore more capable of profiting by its advantages. A specialist course could be pursued with less effort on the part of the student and with better results at the end of his college term. Besides, the cost of an extra year in the collegiate would be less than that at the university, an important consideration to parents in these days of financial stress.

Of great interest to the university graduates—many of whom fought for alumni representation on the Board of Governors—the committee expresses itself as quite won over to the proposition, and recommends that the Federated Alumni Association of the University of Toronto be entitled to elect eight Governors out of the total of twenty-four by direct election.

Also of interest to all graduates is the fact that the Alumni Federation is to take the place of Convocation, which had become virtually obsolete as constituted under the Act.

It is recommended that the City of Toronto contribute to the support of the university in a measure commensurate with the benefits accruing to the city as the seat of the Empire's largest university. It is estimated that the sum of $3,500,000 is expended in the city annually by the college and the students, and another $500,000 saved to the city, without taking into consideration money expended for new buildings, which provide employment for Toronto workmen.

In regard to the re-organization of Toronto General Hospital the report adds: "In connection with the release of certain doctors from the hospital staff, the committee considers that the Board of Governors and the trustees of the hospital, respectively, showed a regrettable lack of consideration for, and appreciation of the valuable and efficient services rendered to the university and the hospital for many years by those whose services were abruptly and irregularly terminated under the authority and with the approval of the President of the university." This matter is mentioned in section 16 of the summary of recommendations.

In dealing with the relation of the Eaton and Rockefeller gifts to the changes in organization, the committee finds that they did have a bearing on the reorganization and it recommends that in future private endowments should not be accepted unless given unconditionally.

The following is a summary of the recommendations:

1. That the relationship between the University of Toronto and the Federated Colleges, having proved at all times eminently satisfactory, be not disturbed.

2. That the present methods of financing the university be continued.

3. That (a) plans for the erection of new buildings and extensions, and substantial alterations on existing buildings; and (b) terms of gifts offered to the university, be subject to the approval of the Senate before acceptance by the board of governors.

7. That generous provision be made for the furtherance of the efforts of those engaged in scientific research.

8. That the composition of the council of the faculty of medicine be revised, so as to enable lecturers and instructors in the clinical departments to vote after serving as assessors for three years, and restricting the franchise in the primary (non-clinical) departments to full professors only.

9. That the status of the Ontario College of Education be continued as at present.

10. That the city of Toronto contribute towards the support of the university.

11. That the Minister of Education be not a member of the board of governors.

12. That "Convocation" consist of the Alumni Federation of the University of Toronto as at present constituted.

13. That the government consider future representation of the workers' educational association on the board of governors and the senate, on conditions set forth in the section of the report relating to the representation of labor.

14. That the Federated Alumni Association of the University of Toronto be entitled to elect eight representatives out of a total of twenty-four, by direct election, to the board of governors.

15. That the question of permitting representation in the legislature to the university be given earnest consideration by the government.

16. (a) That the reorganizations in medicine, surgery and gynaecology (1919 and 1920) be referred back to the proper authorities for reconsideration.

(b) That the method of removal of certain doctors from the staff was unfortunate.

(c) That a new agreement regarding hospital appointments be entered into by the university and the hospital.

17. That hospitals receiving government aid guarantee against the practice of "fee-splitting" by doctors practicing therein.

18. That an effort be made to devise a means whereby doctors not on the university staff may have access to the public wards of the hospital.

Admits Starting Forty Fires.

John Ison, of London, Ontario, who is held upon a charge of setting fire to numerous London homes and institutions. He confesses to setting fire to thirty or forty places. He is a puzzle to the police as he apparently has placed no value upon human life.

Graves of British War Dead Visited by Their Majesties

Rome, May 13.—King George and Queen Mary spent most of the last day of their visit to Rome with a sightseeing tour. Late Saturday they left without ceremony for Asiago to visit the cemeteries in which British war dead are buried.

They were bade farewell by all the members of the Italian royal family and were cheered by crowds in the streets from the Quirinal to the railway station.

NEW CANADIANS FROM THE HEBRIDES.

A family of Scotch immigrants from the Hebrides, waiting to land at St. John, New Brunswick. They are typical of the families which are being attracted to this country under the new immigration plans. They are of splendid stock, and bring with them the traditions which have made Scotch men and women ideal settlers.

Weekly Market Report

TORONTO.

Manitoba wheat—No. 1 Northern, $1.24.

Manitoba oats—Nominal.

Manitoba barley—Nominal.

All the above track, bay ports.

Cheese, finest easterns, 16¾ to 17c. Butter, choicest creamery, 29⅝ to 32 3-16c. Eggs, selected, 34c. Potatoes, per bag, car lots, $1.20.

Com. and med. dairy cows, $3.50 to $4.75 per cwt.; calves, $4.75 to $5.25; picked veals a shade higher; hogs, good lots, $11.50; do, rough and coarse, $11; sows, $8.25 to $9.

FORBID GERMANS TO USE FRENCH TRAINS

Reich Places Rhineland and Ruhr Inhabitants Under New Prohibition.

Essen, May 13.—The measures of passive resistance of the Germans are to be strengthened under a decree announced by the Reich authorities, which prohibits Germans in the Rhineland and the Ruhr from riding on militarized trains operated by the French and Belgians and otherwise tends to reduce the already limited communication between the Germans and the occupation authorities.

"Under no circumstances will Germans be permitted to travel on French or Belgian trains," says the decree. "All persons violating these instructions will be heavily punished."

No penalties are specified in the decree. The first repressive measure is reported from Frankfort, where Germans riding on French controlled trains for Mayence were arrested by German authorities.

German Dye Concerns Reap Large Profits

Berlin, May 13.—Three of the biggest dye concerns in Germany, Meister, Lucius, Griesheim and Bayer, have issued a gold dividend of .6 of a gold mark per share, which for their heavily watered stock means 300 per cent. on the invested capital. Thousand-mark shares on the bourse sell for over 1,000,000 each. It is admitted each company's earnings were about 4,000,000,000 paper marks. They have spent immense sums besides for reconstruction and welfare work.

PRINCIPAL PROPOSALS IN BUDGET RELATING TO CUSTOMS DUTIES

A despatch from Ottawa says:—The following official summary gives a bird's-eye view of the principal proposals affecting customs in the Budget presented by Hon. W. S. Fielding:

Preferential tariff is reduced by a discount of 10 per cent. on the amount of duty computed under such tariff, when such goods are conveyed without trans-shipment into a sea or river port of Canada.

Articles on which the discount will not apply:

(a) On wines, malt liquors, spirits, spirituous liquors, liquid medicines and articles containing alcohol, sugar, tobacco, cigars and cigarettes; or

(b) To goods on which the rate of duty does not exceed 15 per cent.; or

(c) To goods admitted into Canada under the Canada-West Indies trade agreement.

Sugar, refined, reduced one-half cent per pound.

Sugar, raw, reduced about 40 cents per hundred pounds.

Cigarettes are reduced to the former rate.

White oxide of antimony is made the same rate as zinc white.

Fire brick for the construction or repair of a furnace is made a uniform rate of 5 per cent. preferential tariff, 7½ per cent. intermediate tariff and 10 per cent. general tariff.

"Sheet feeding machines" and "machinery for printing by photographic methods" are added to the item "printing presses" at the rates of

5 per cent. preferential tariff,
10 per cent. intermediate tariff,
10 per cent. general tariff.

Stumping machines are reduced to the same rate as "other agricultural implements":

10 per cent. preferential tariff,
15 per cent. intermediate tariff,
15 per cent. general tariff.

A drawback of 40 per cent. is to be allowed on materials used in the manufacture of these machines.

Machinery of a class or kind not made in Canada for the manufacture of fish meal and other articles from fish and the waste thereof is made free.

The free entry of well-drilling machinery is extended to "parts thereof" and certain "drawn or seamless tubing."

Artificial silk yarns or filaments are made dutiable at 10 per cent. preferential tariff, 12½ per cent. intermediate tariff and 15 per cent. general tariff.

All manufacturers of artificial silk are made dutiable at the same rate as manufactures of silk. In some cases this is an increase and in others a decrease.

Usual coverings containing machinery are reduced under the preferential tariff from 15 per cent. to 7½ per cent.

A drawback of 60 per cent. may be paid on machinery and parts thereof of a class or kind not made in Canada when used in manufacturing or producing goods of a class or kind not made in Canada prior to the 12th of May, 1923.

A drawback of 99 per cent. is to be allowed on copper in blocks, pigs or bars when used in the manufacture of rods for electric wires.

In addition to the changes mentioned in the official summary, the following appear on an examination of the budget resolutions:—

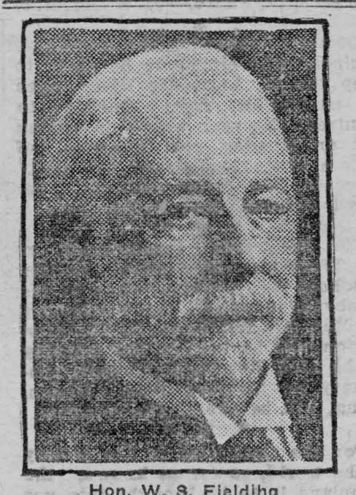

The duty on potatoes imported from the United States, or from any country imposing a duty on Canadian potatoes, is raised from 20 to 35 cents per 100 lbs. under the general and intermediate tariffs, and from 12½ to 20 cents under the British preference.

Raisins and dried currants are made free under the preferential tariff and raised from 2-8 cent to 3 cents under the other tariffs. The purpose of this is to permit of an advantage over other competitors being offered to Australia.

Hemp seed for agricultural purposes is placed on the free list. This and the bounty on hemp are measures to encourage the growth of that business.

The specific duty on malt flour containing less than 50 per cent. in weight of malt is reduced from 3 to 2 cents per lb., the ad valorem duty remaining unchanged at 35 per cent.

Licorice paste not sweetened is reduced in duty by five per cent. under all tariffs. Licorice in rolls and sticks is left unchanged.

Hon. W. S. Fielding

Minister of Finance, who delivered his seventeenth budget on Friday last.

DIVORCE INCREASE APPALS CHICAGO

One in Every Five Marriages Annulled During Past Three Months.

Chicago, May 13.—One divorce is being granted for every five marriage licenses issued. Such was the rate in Chicago during the first three months of 1923. In ten years the rate of domestic wrecks to marriages has approximately doubled. Judges in their chambers ascribe the growth mostly to changing economic conditions and to a let-down in the old-fashioned family life, with its teachings and its restraints.

Meanwhile from Bench, Bar, Church and civic and social organizations shouts are again arising that the divorce evil, as Gladstone once phrased it, "perhaps constitutes the greatest menace to American institutions."

In the first three months of this year the County Clerk issued 7,505 marriage licenses, while the Circuit and Superior Courts handed down 1,588 divorce decrees. Last year the mill ground at about the same speed, with 38,094 marriage licenses in Cook county and 7,285 divorces. Back in 1914 the marriage licenses numbered 33,897 and the divorces 3,614.

The sharpest reproof is contemptuous silence.

GREEK TROOPS MASSING IN THE EAST

Venizelos Calls Council to Discuss Spearate Agreement With Turkey.

Lausanne, May 13.—The conference here is in a turmoil over a report from Athens announcing that General Pangios, commanding 150,000 Greeks in Thrace, is threatening to seize Constantinople unless Greece gets better treatment at Lausanne.

M. Venizelos called an extraordinary council, composed of Foreign Minister Alexandris and M. Ramanos, Minister to France, assisted by the Greek delegation. M. Ramanos was hurriedly summoned from Paris for this purpose.

They met this afternoon to decide what drastic action to take this coming week, notably whether to start separate peace negotiations.

The Greeks feel they have been let down by the allies. The Greek army in Thrace is the chief instrument of the allies to enforce peace on the Turks, and the allies want to use this club over the Turks until the end of the conference, and then discuss the Turkish claim for reparations against Greece on account of the Anatolian devastations. M. Venizelos fears that the allies will permit the principle of the Turkish right to reparations to be written into the treaty.

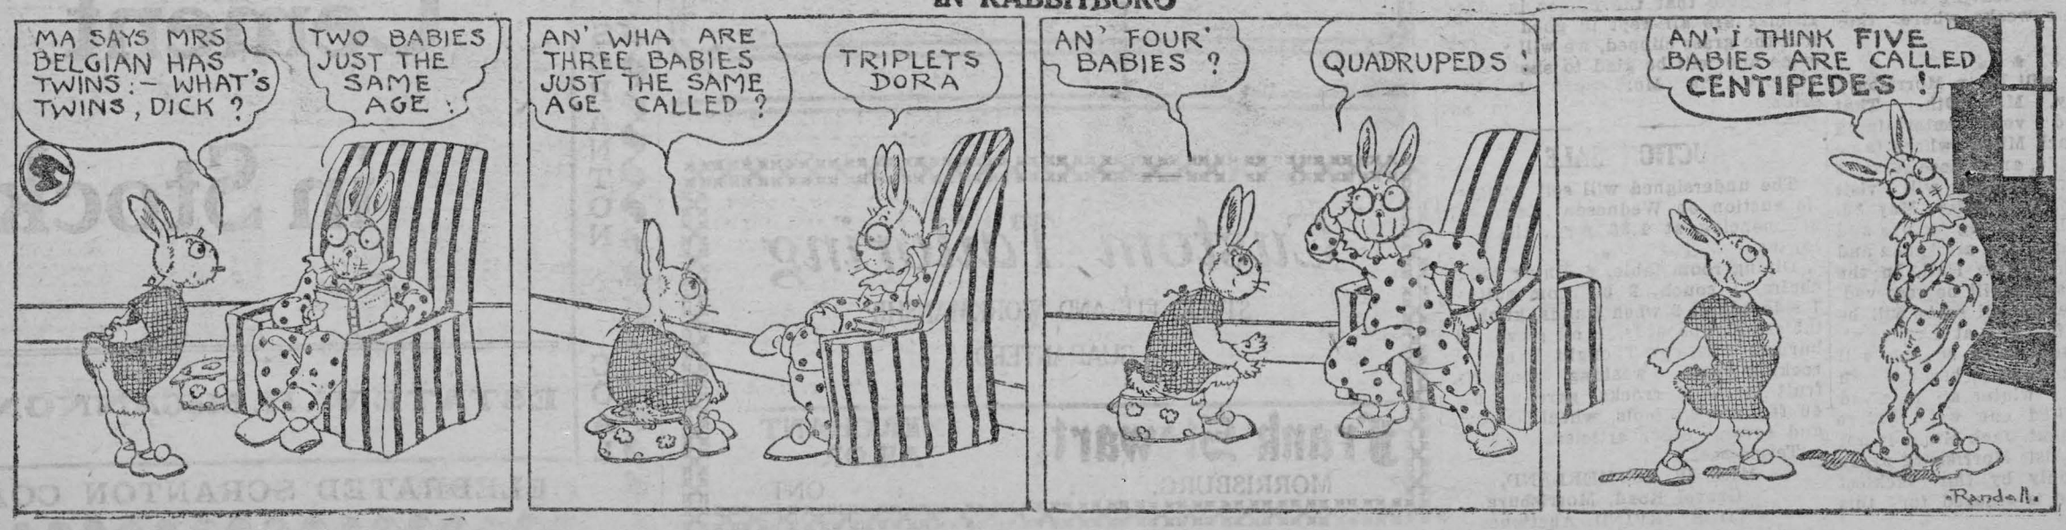

Gold Mining Season Opened in the Klondike

Dawson, May 13.—The first of the Yukon fleet of gold dredges to get under way this season started operations Saturday morning on the Klondike Valley ground of the Burrall and Baird Company. Dredges in other sections of the district will commence operations during the week. Water for the hydraulic plants was turned into the Yukon Gold Company's $50,000,000 ditch to-day for the first time this season. Winter camps of gold pay dirt are being washed up. Freshets prevail on all Klondike streams, owing to the exceedingly warm spell of weather.

If you want to be free of cares, be careful.

Running a house without a savings fund is like running a ship without ballast. It is dangerous at any time, and disastrous in a storm.

IN RABBITBORO

LOCAL AND GENERAL

Stove repairs ordered for any range.

MORASH FOUNDRY

Mr. W. S. Connolly of Hamilton was in town on Wednesday.

* * *

An assortment of Ferns, Vines and Flowering Plants for your Verandah Boxes at Geo. W. Harrison's.

* * *

Miss Dorothy McMartin, Montreal is spending a few weeks at her home here.

* * *

Mr. and Mrs. Mose Pariseau of Montreal are visiting the former's mother.

* * *

Mrs. Maud Lawless spent last week-end with friends at Elma.

* * *

* * *

Spring bedding plants of all kinds at Geo. W. Harrison's.

* * *

Rev. Jabb of Morewood will preach at Knox Church, Morrisburg, at 11 a.m. and 7 p.m. on Sunday next.

* * *

The Earl and Countess of Minto and Lady Bridget Elliott, who sailed for Canada over a week ago, were passengers on the Montlaurier, which was compelled to return to Belfast owing to boiler trouble. They will transfer to another ship at that port.

* * *

Mrs. George N. Casselman and four children are renewing acquaintances in town. This is the first time Mrs. Casselman has been in her old home town since moving to Belleville ten years ago. She says the old town looks quite natural. She is visiting her sister, Mrs. Celia Markell. They are leaving for Niles, Mch., in a few weeks where they will reside.

* * *

Jack Miner will be in Morrisburg on Wednesday, May 30th. That wonderful and very entertaining personality, Jack Miner, whose fame is continent-wide, and whose services are so hard to secure, will visit Morrisburg on Wednesday, May 30, and will give his moving picture and most entertaining talk afternoon and evening, in the Music Hall. In the afternoon no seats will be reserved, but in the evening all seats will be reserved and for sale at Chalmers'. Secure your seat early so you will not be disappointed, because in Winchester last winter all reserved seats were filled one week before the entertainment. Jack Miner is not likely to ever visit Morrisburg again and it was only by the luckiest chance that he is secured for this visit.

Died—At Morrisburg, Thursday, May 17th, Mr. Luther S. Froats, in his 74th year. The funeral service will be conducted at his residence by Rev. Kraft, on Saturday, May 19th, at 2 p.m.

* * *

Mr. Will Reid of Collins Bay was at his home here over the week-end.

* * *

On and after July 1st, when an amendment to the Coroner's Act goes into effect in Ontario, it will not be necessary for a jury called on an inquest to view the body of the person upon whom the inquest is held.

* * *

The Leader acknowledges receipt of an invitation from The Board of Trustees of the North Mountain Consolidated School to attend the official opening of the new school on Thursday, May 24th.

* * *

Tomatoes, Cabbage, Cauliflower, and celery plants for sale at Geo. W. Harrison's.

* * *

At a meeting of the U.F.O. Executive held at Dixon's Corners on Monday, W. H. Casselman gave a full account of his stewardship as the U.F.O. member for this riding. It is said that the executive unanimously decided to recommend Mr. Casselman at the U. F. Convention to be held some time during the first week in June.

* * *

We still have a few good Victor Records left from our fast disappearing stock. 10 inch double sided at 40 cents; 12 inch double sided at 75 cents, and Red Seal Records from 75 cents to $1.25. When these are gone you'll have to buy at regular prices elsewhere. Come up stairs and save money.—J. Miles Whitteker.

* * *

Come, see, and be convinced that F. W. Herbick has the choicest stock of vegetables and flower plants for sale seen anywhere.—F. W. Herbick.

* * *

Demetri Joanewici, the Rumanian engineer who claims to be able to keep the St. Lawrence River open for navigation from Quebec to Montreal the year round, is setting out on Monday next a series of cruises along the river to study currents, ice formation, etc. between Montreal and Father Point.

* * *

The Brockville Presbyterial of the Women's Missionary Society will hold its annual meeting in the Presbyterian church at Morrisburg on May 31 and June 1. The first session will be held in the morning of the 31st. Rev. J. A. Mowatt, missionary on furlough from Honan, China, will be one of the speakers.

* * *

For the first time in the history of the world, so far as known, the aeroplane is to be brought into use as a conveyance to bring voters to the polls at the coming Ontario elections on June 25. The far distant polling station of Moose Factory is to usher in this new world record.

* * *

Dr. Vining of Toronto, will speak in the Lecture Room of the Methodist Church in Morrisburg, to-night, (Friday). There will not be an appeal or offering, but there will be an interesting address given in the interest of the Armenian children, outlining his scheme for bringing a limited number to Canada and training them in Agriculture. The public are cordially invited.

Mr. J. A. Campbell was the candidate chosen at the Liberal Convention held at Chesterville Thursday, to contest the riding of Dundas in the interest of the Liberals in the coming Provincial Election.

Sunday morning, May 20th, at 11.30, the Methodist Sunday School will observe "Go to Sunday School Sunday," with a special musical program. Mr. Frank Shove of Aultsville will be the speaker.

Miss Bertha O'Hara and Miss Dora Haggarty left Monday May 14th, for Athens to attend the annual Pentecost. Owing to their absence the service will be conducted by Mr. Collison of Iroquois Sunday evening at 7 p.m. at the Mission Hall.

THANKS

The Morrisburg Lumber Mills take this opportunity to thank the Electors of this community for the support given the by-law voted on. We are certainly very much encouraged to go on and make this business an asset to the people.

We note that the homes in Morrisburg are all kept in good repair and the grass clipped, we will do the same and will be glad to show your visitors the Morrisburg Lumber Mills. ac

Tindal's Garage

Do you like apple-sauce?
Well, everything in it's season.

The time is now right for the use of automobiles, and you will like motoring ever so much more this season, if in fairness to your car, you give it the seasonable going over which it needs. You will not be treating yourself fairly, if you neglect the above.

Remember, we do not advocate doing unnecessary work, but in line with the old adage, "A Stitch in time saves nine," a few dollars invested wisely in little repairs, that are needed, now, will be pretty sure to obviate heavy expenditures later in the year.

Following the recent rains the 1923 grass crop is showing remarkable progress. Accordingly, the wise ones are getting their lawn mowers sharpened in readiness for service. Can you imagine anyone enjoying the work of pushing a lawn mower? Our customers say it is a pleasure to use one which has been sharpened by our improved Scientific Process. A trial will convince you.

..."GENUINE SERVICE" our motto.

H. B. TINDAL, Prop.

A Poor Combination

A dependable car, a smooth road, a good driver—— and questionable eyesight. It's a combination found only too often among motorists today.

An engine driver must pass a satisfactory eye test both as to vision and color perception, before being allowed to drive his engine, but a motor car driver is free to drive his car if he is able to use his hands and feet. No thought is given to vision, yet about half the auto accidents are traceable to defective eyes.

It is up to the man behind the wheel———and woman too——to protect the public and safeguard himself. After the accident, all you can be is sorry——or dead.
