sun ice

We've got the winner's look!

Cross-section view of Ultrex

How Ultrex works

The Ultrex microporous coating is applied to the underside of the fabric. Once coated, a honeycomb effect is created throughout the fabric consisting of numerous micropores. These micropores are so small the rain and wind do not pass through. Yet they're large enough to permit perspiration vapor molecules to escape and still retain much of the body's natural warmth.

ULTREX by Burlington

The waterproof fabric that takes comfort to extremes.
