Johnston—Carlyle

At the Presbyterian Manse Chesterville on Tuesday evening February 11th, 1919 by Rev. Charles Mullin, Janet Sarah, youngest daughter of Mr. George M. Carlyle to George Harold Johnston son of Mr. and Mrs. James Johnston. Mr. and Mrs. Johnston will reside near Dunbar where a large circle of friends wish them a prosperous wedded life.

Arenas Win Fast Game

Chesterville got off to a good start Monday night in the second half of the hockey schedule by defeating the fast Russell team by 5 to 1 on Chesterville ice in a game that was exciting from start to finish. The play was strenuous at all stages and the home boys checked so closely that Russell was unable to get away with their speed. Fader scored three of the goals on good combination work with Braithwaite and Foster, while Bogert put up a heady game at all times. The play was characterized by the best of good feel among the players and it was not necessary to chase any one from the ice.

Carnival Scored Big Success

The big skating carnival on Tuesday night proved an attraction worthy of the advance agent and his glowing description, with more doing at all stages than might be seen at the proverbial three-ring-circus. The costumed skaters were so numerous that it was with the greatest difficulty that the awards were made. Unfortunately a register of all the entries was not kept and it is impossible for us to give the names and characters of those taking part.

The following are the prizewinners:

Ladies—1 Katie Rady, Salvation Army Girl. 2 Miss Martin, French Nurse.
Gentlemen—1 Frank Dwyer, Romeo. 2 Geo. Reaburn, Robin Hood.
Girls—1 Ruth Simser, Miss Canada. 2 Helen Price, Queen of Hearts.
Boys—1 Frank Casselman, Jack of Hearts. 2 Arnold Lynch, Tramp.
Children—1 Addie Campderros, Japanese Girl. 2 Willie Riddell, Scout.
Comic Gentleman—1 Ken Baker, Wild Man. 2 J. Sorrell, Charlie Chaplin.
Scotch Lassie—1 Miss Sullivan.
One Mile Race—Sam Beckett.
Boys' Half Mile Race—Melvin Harper.
Girls' Race—Helen Bogart.

Mountain Township Woman Burned to Death

A tragedy occured in the village of Hallville, Mountain township, Friday morning, when Mrs. Victoria Suttles, aged 75, was burned to death and the house in which she was residing totally destroyed. The fire which wiped out the home originated from a coal oil stove, it is believed, in the room occupied by the victim.

Mrs. Suttles resided with her daughter, Mrs. Elgin Sears, and was in the habit of taking a coal oil stove each night to warm her room. On Friday night about 11 o'clock the family were awakened by the sound of screams coming from the room occupied by Mrs. Suttles, and her daughter on rushing to her mother's room found the door locked. She called her husband, who endeavored to batter it down. When it did give way he was met by flames and a volume of smoke which prevented him from entering. The flames spread swiftly until the house was a mass of flames, and it was seen to rescue the aged lady was impossible. In their night attire Mr. and Mrs. Sears and their children were driven outdoors, where they were taken care of by neighbours, who are still looking after them. The charred body of Mrs. Suttles was found in the basement of the house afterwards.

On the evidence that can be gathered it seems certain that the coal oil stove in the room of Mrs. Suttles started the fire. Some state that it exploded. It is believed that Mrs. Suttles was asleep and was awakened by the fire which must have gained considerable headway. She was an active woman in spite of her advanced age and could have readily got to the door to escape had she had a chance. All efforts to get her out while the fire was buruing proved to be so dangerous that they had to be abondoned.

Although neighbors worked hard to save the house and furniture it was of very little use and practically everything was lost. Mr. and Mrs. Sears loss would be well over $1,500 it was stated. The house was a small one of frame construction. No inquest was ordered as far as could be ascertained.

Frank Spotten Died in Ohio.

Funeral Mass for Frank Spotten was held from the Church of the Immaculate Conception Saturday morning at 9.30. The employees and office men of the Cleveland Crane & Eng. Co., where Mr. Spotten was superintendent, attended in a body and marched to the church and the cemetery. Beautiful floral tributes in the form of a large cross from the associates at the plant and other pieces, testified to the esteem in which Mr. Spotten was held. Mr. and Mrs. Spotten were married eleven years ago last June. He was 40 years of age the 10th of last April. Mrs. Spotten was Miss Anna Chambers. They made their home at the family home on Vine street, and after the death of Mrs. Spoften's father, John Chambers, the house passed to Mrs. Spotten, and they continued their residence there until six months ago when the present home on Wright street, purchased of M. D. Wellman, was secured. Two children, twins, Leonard and Leona, now nine years old, were born of the union.

Mr. Spotten had been with the Cleveland Crane& Engineering Co. for 12 years, working himself up from a humble employee to the position of superintendent. Officers and men held him in highest regard. As a husband and father, Mr. Spotten was ideal, and Willoughby has lost a friend and neighbor of the highest type with his passing. —Willoughby News.

HOASIC

We are sorry to report Mr. John Brown is but slowly improving.

Mr. and Mrs. Calvin Gallinger spent Sunday with Mr. and Mrs. Ernest Styles.

Miss Elma Beckstead and Miss Carrie Barkley of Boucks Hill have been recent guests of Miss Lillian Weegar.

Mrs. Robert Bogart of Berwick, spent the week-end with her brother Durham Wells.

Mr. and Mrs. Frank Hess spent Sunday at the latter's parental home.

Miss Hattie Epaugh and Mrs. Robert Weagant and baby Cameron were in Froatburn on Saturday.

A number from here and vicinity spent a very enjoyable evening at the home of Oliver Aulguire on Thursday.

Mr. and Mrs. Durham Wells and son Graham and Miss May Bogart spent one evening this week at the home of Darwin Weegar.

Mr. and Mrs. Fred Wells spent the week-end at Mr. Robert Brown's of 2nd concession, Aultsville.

Mr. and Mrs. J. Lane and Mr. and Mrs. Jay Suttle spent Sunday last with Mr. and Mrs. Morley Wells.

Mrs. Roy Swerdfeger and Mrs. Oliver Alguire and Miss Eleta Barclay were in Morrisburg on Saturday.

Mrs. John Wagner and son of Morewood are spending a few days with Mrs. Henry Wells who has been seriously ill, but we are pleased to say at time of writing is recovering.

Mr. and Mrs. Sanford Colquhoun were in Morrisburg on Saturday.

Mr. and Mrs. Willis Swerdfeger spent Monday at Boucks Hill.

Mr. and Mrs. M. Darragh were recently at Morrisburg.

Mr. Sanford Herriman of Elma spent a few hours here on Saturday with his daughter Mrs. John O'Shaughnessy.

GRANTLEY

Mr. and Mrs. George Cunningham were Sunday guests of Mr. Wallace Myers.

Mr. and Mrs. Chas. McMillan and daughter Hazel and Mr. and Mrs. Walter Carr and Miss Katie and Master Clifford spent Sunday at Mr. Don Carr's.

Mr. and Mrs. George Elliot and daughter Doris spent Saturday evening at Mr. Howard Beckstead's.

Mr. T. C. Merkley and Miss Wilda of Bouck's Hill were week-end guests of Mr. Will Carr.

Mrs. Sandy Gordon and Pte. P. Fetterly were calling on Miss Velva Todd one evening last week.

Miss Olive Carr has returned home after spending some time visiting friends at Aultsville.

Mr. and Mrs. Arthur Beckstead and Miss Wilda were guests of Mr. Walter Carr's Thursday evennig.

Mr. Frank Todd and the Misses Mabel and Velva spent Thursday at Mrs. Sim Armstrong's.

Mr. B. Coons of Winchester Springs is spending a few days with Mr. Frank Darling.

Mr. and Mrs. M. O. Robinson and family were the guests of Mr. George Countryman of Bush Glen on Sunday.

Miss Maude Hesson and Mr. Jim attended the Memorial Service of the late Mrs. Angus Brownell, North Valley.

TOY'S HILL.

Mr. and Mrs. Frank Kirkwood of the Hill motored to Winchester station last Saturday to meet Mr. and Mrs. James Kirkwood of Detroit.

Quite a number of the Hill folk attended the memorial services of the late Mrs. S. Strader of Williamsburg, last Sunday, who died after a short illness of the flu.

Mr. andMrs. James McLaughlin spent last Thursday the guests of Mr. and Mrs. Walton Weaver of Mountain.

Mr. and Mrs. Albert Haggerty were visiting at the home of Mr. and Mrs. Jas. McLaughlin recently.

Mrs. S. Moore was visiting Mrs. James Davidson of Winchester Springs recently.

Mr. and Mrs. Jas. Johnston were visiting last week at Hainsville.

Mr. and Mrs. Levi Casselman of Spencerville, were recent visitors at the home of Mr. and Mrs. Geo. Carter.

Mr. and Mrs. Wes. Henderson and Mr. and Mrs. Frank Kirkwood and Mr. and Mrs. James Kirkwood of N. Y. and Mr. Robert Kirkwood Sr., motored to attend the memorial service of the late Mrs S. Straider of Williamsburg. Her maiden name was Bessie Kirkwood of Toys Hill.

Misses Donnie and Jean Kirkwood were the guests of Miss Della Harper last Sunday.

Mr. Ed Hummel of Maple Ridge was calling at Toys Hill recently.

Appreciated Gifts from Grantley

Witley, Dec. 15th, 1918

Dear Mrs. Fetterly: -

Just a line to let you know that I got the box from the Beckstead Knitting circle and am very thankful to them for sending it.

I got the socks with your name in so I thought I would write you thanking you for them.

They are certainly fine socks, much better than the ones we are issued with, and we certainly need good socks for marching and drilling every day.

The Knitting Circle is sure doing great work for the boys over here sending us socks and other articles of clothing.

I will close for this time again thanking you for those beautiful socks and also give all the kind ladies of the Knitting Circle my thanks and best wishes for a Happy and Prosperous New Year.

Pte. M. R. Bouck,
6th Can. Res. Bn.,
Witley Camp, Eng.

Value of Stall and Yard Manure Compared

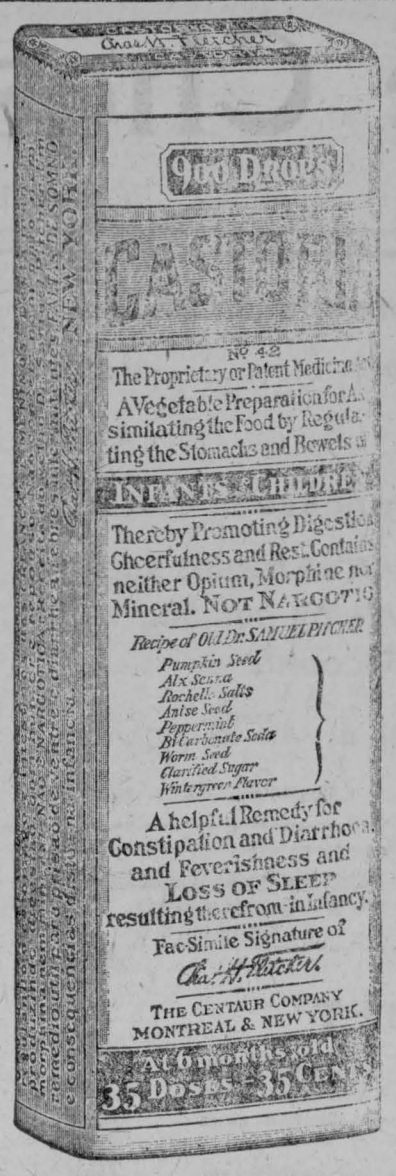

During the war very high prices have prevailed for commercial fertilizers. Even then it has been almost impossible to obtain some of these materials, and prices are still high. Farmers should, therefore, pay more attention to farmyard manure. It should be produced in as large quantities as possible and when produced should be applied in a way to eliminate loss and waste, or at least to reduce these to a minimum. This implies the adoption of intelligent methods of handling. Experiments conducted in this country at our experimental farms and agricultural colleges prove that where at all practicable the best method is to haul the manure to the fields as made. An experiment along this line extending over five years and recently concluded at the Ohio Agricul ural Experiment Station, shows decided profits in favour of the above method. The rotation followed was corn, wheat, clover. The manure was applied on sod land before ploughing for the corn. No more manure was applied for either the wheat or clover crop. Eight tons per acre of fresh stall manure was spread on the sod in December and January, while on each day an equal amount was placed in low flat piles in the open to be spread in the spring immediately before ploughing. Five distinct comparisons between what was called "stall" manure and "yard" manure demonstrated that there was an average gain of 4 I bushels of corn, I.3 bushels of wheat and 490 pounds of clover hay per acre from the stall manure over the yields from the yard manure. Valuing the crops at the prices prevailing at present the gain amounted to $11.60 per acre, or, in other words, the fresh stall manure applied directly to the land was worth $1.45 more than manure which had been piled and applied in spring. This gain was made without expense. Indeed there was less handling of the manure. Was it not worth while? - F. C. N.

War Savings Societies.

A War Savings Society is a group of persons organized to promote systematic saving among its members and to emphasize, in every way possible, the need of desirability of thrift. Ten or more persons may thus organize themselves and having done so, secure official recognition through the issue of a charter from the National War Savings Committee.

Organized in schools, factories, large business houses, and in the midst of already existing bodies, these War Savings Societies are capable of assisting greatly in the War Savings and Thrift Stamps campaigh. Organizations su h as the Daughters of the Empire, the Red Cross, the Home Makers, the Women's Grain Growers and others that could be mentioned can render valuable service by forming War Savings Societies and Thrift Clubs among their members.

War Savings Societies should be formed by the thousands throughout Canada.

Light Four Touring

Model 90
The Practical Car

MORE than 80,000 of these Overland Model 90 touring cars have been sold during the past year.

A pretty good tribute to their all-around dependability—their usefulness—their economy.

Compare this Model 90 with other cars in its price class. Note its style, its beauty and its easy riding qualities.

Its 32 horsepower motor is a wonder for power, reliability and faithful performance.

Soft cushions, long resilient cantilever rear springs and large four inch tires smooth out the rough stretches of road and make driving a pleasure.

We want you to try a Model 90 and form your own opinion as to its value. We will be glad to furnish the car and we feel sure that you will be satisfied with its performance.

A Great War Record

A special to the Citizen says: Few communities in Canada have such a remarkable war record as Cobden. Altogether 90 young men out of a total population of less than 1,000 men have answered the call and gone to the front. Of this number fifteen have returned. Each man who has come back has been given a reception by the townsfolk, and $50 in gold. Since the first man returned this has been done by the Cobden people. When the armistice was signed there was 65 to come back. Ten had paid the supreme sacrifice. It was realized that the 62 still overseas should be treated as those who have already returned. To meet this expenditure a fund was organized and $6,000 raised, $1,000 more than was aimed at. Not one farmer in the district gave less than $10 and many as much as $50 each. After each Cobden man has been given the $50 in gold, there will be left out of the fund some $2,800. It has been decided that with this a memorial hall to Cobden's soldiers will be erected in the town, there being no town hall. The remainder of the cost of the hall will be borne by the town.

$1,500 for Three Week's Work

Largely as a result of this war Canada will have to pay interest on about $2,000,000,000. Her hope of financial salvation lies in the devolopment of her natural resources. In calling attention to these facts, Chirman H. B. Thomson of the Canada Food Board urges that the greatest possible development of the sugar maple trees of Eastern Canada be under taken this spring. "Every dollar's worth of Canadian maple sugar and syrup produced is a dollar saved for Canada," said Mr. Thomson.

Those who have made a business of maple sugar and maple syrup say that only 52 per cent of the trees in the average sugar bush under operation are tapped and that without additional equipment save extra pails, it would be possible to increase the production greatly if those already accustomed to tapping some of their trees would tap more. In addition to this possibility for expansion is the opportunity presented by many farms which have sugar maple groves which are not tapped at all, or, if a few trees are tapped, the small quantity of sugar and syrup produced suffices only for the use of the family on the farm.

A Montreal dealer recently sent out a questionnaire to a large number of maple sugar producers asked questions as to the amount produced, number of trees and total receipts in money. The answers varied very considerably, but one man, with 75 acres of bush, realized $1,500 last year for about three weeks work.

The average healthy maple tree was supposed to produce 60 cents worth of sap in the season at prices pertaining before the war it should be twice that much now. It will do no harm for farmers to experiment this season and see how many trees they could tap, for sugar and syrup will pay.

The "Thrieftiest American" is Franklin's New Name.

The "Thriftiest American" is the phrase applied to Benjamin Franklin, in the latest literature issued by the United States National War Savings Committee. As a statesman, a writer, philosopher and inventor his reputation has stood high since his death over a century ago. But to-day it is a preacher of the gospel of thrift that he is being recalled to the great mass of the people of the United States. On the new issue of United War Savings Stamps his likeness is also to be found.

The explanation is that to-day the leading men of the world, those charged with directing its affairs, realize that the exercise of thrift is absolutely necessary to the restoration of the normal life of all countries. It is to be observed also that these men consider it just as necessary for the people of the United States and Canada—countries undamged by the war—to save as it is for those of France or Belgium to do so. It is the condition on which financial and industrial recovery is based.

The Canadians War Savings Plan makes easy this very necessary practice of saving. It also makes saving profitable. Four dollars paid to-day for a War Savings Stamp will bring $5 in 1924. Twenty-five cents buys a Thrift Stamp and 16 of these make a War Savings Stamp, on which the government pays 4½ per cent compounded half-yearly. Could saving be made easier?

The Litmus Paper Test for Soil Acidity

This is the simplest and most commonly used test for soil acidity. An easy way to make the test is to take a moist clod of soil, break it open, insert a strip of blue litmus paper, and press the soil together. If the paper turns pink or red within about five minutes the soil is acid; if it does not turn pink the soil is neutral or alkaline. A good grade of litmus paper, 100 strips in a small glass tube, is carried by many druggists. Care should be taken in the test not to let perspiration come in contact with the paper, as this by itself may turn the blue paper pink.

HOW ABOUT YOUR HANDS?

They Are Said to Indicate Your Character.

"He wrastled with my finger," said the rough miner of Bret Harte's immortal story, "The Luck of Roaring Camp," and, unable to withstand the appeal of helplessness to strength, the clinging baby fingers twined about the potent man's hand, "Kentuck" straightway adopted as his own the half-breed Indian baby that fate had thrown across his path.

Dr. Allan McLane Hamilton, in his recent book, "The Recollections of an Alienist," speaks of the great significance of the human hands and uses a photograph of the hands of Charles Dudley Warner, taken at the insistence of a friend. Beautiful artistic hands that express the grace and kindliness distinctive of that author.

M. d'Arpentigny, the French savant, states that the hands represent three types: "Those whose fingers have pointed tip are possessed of a rapid insight into things; are extra sensitive and pious and impulsive. To this class belong poets and artists. To the square tops belong scientific people; sensible, self-contained characters, professional men. The spade-shaped tops — thick tips with little pads of fish on each side of the nails—are materialistic, commercial, practical, with a higher appreciation of all that tends to bodily ease and comfort."

To many persons the hands are more expressive of emotion than the face. The welcoming hand stretched out in love, the appealing hand, the pleading hand, the withdrawn hand, the hand clasped in humility and submission.

All about us, on every hand, are those needing some assistance, perhaps trifling, perhaps great, over the rough places of life. Few of them can pay for this aid. It must be given freely, often given unasked. It may be they need your hand to safely cross the strip of ice upon the street. It may be they need the restraining hand of your prayers to guard them across the thin ice of temptation.

Unless you be one of those stricken of God, your hand, lying so quietly upon your knee, has power in it. It may be a brawny fist that can sling a trunk to the top of an express wagon. It may be a shadow hand whose only strength lies in writing a signature to a check that will be honored in a bank. It may be a hand of soothing magnetic touch, or fingers that can fashion a baby's dainty christening robe, but it is your hand to use, so use it, with all the strength that in you lies, to help your fellow men. If its strength can stop a runaway horse, if the signature may keep want and worry from a worthy door, if the healing touch can ease pain, or the baptismal robe help to consecrate a life, you will have won man's gratitude and God's blessing. If you keep the wolf from some door, but feebly barricaded against want, the gift will return to you in the smile of an angel guarding the gates of heaven. Do not wait until people are so hard-pressed they reveal all their piteous needs to you — their heart needs, their soul needs, their material poverty. Anticipate something of their want with your love, your remembrance, with the strength of your hand, and the encouragement of your words. So that when, like that woman of eager, helpful hands, God's peace upon you falls, tearful eyes may bless you as one whose ready hands brought solace to them in ways that you remember not.—Baltimore Sun.

He Stayed at Home.

"Well—no," said the ancient Arkansawyer, "I hain't never did much of what you'd call traveling. I was 97 years old, last grass, born and raised right yur in Shagbark township, and hain't been outside of the county but once. That was when I was about thirty years old. I went over to Torpidville, and they just nacher'ly took and started to lynch me the minute I got to town, for something or nuther, I never did find out what. One foot was already in the air and the other barely touching the ground when some feller came running and hollered that they were making a mistake — I wasn't the guilty party a-tall. As soon as they turned me loose I lit out for home as the crow flies, and I hain't done no traveling to speak of since. I always figgered that on the next occasion the feller that knowed it was a mistake might not get there in time to do me any good."

The Boxer Rising.

The Boxer rising was the movement of a Chinese society organized in 1900, directed again missionaries and other foreigners. The Manchus of the court and the empress at first opposed, but afterward encouraged the movement. This led to the murder of the German Minister at Peking, the destruction of several of the legations and the siege of about 200 refugees within the walls of the British legation at Peking. A relief expedition of about 18,000 soldiers, made up of British, American, French, German, Russian and Japanese, went to the rescue, which was accomplished after heavy fighting.

Her Master's Voice.

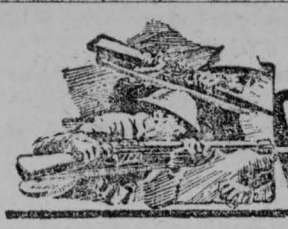

Head of the House—"Where are you going, my dear?"

His Better Half — "Where I please."

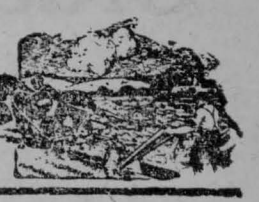

Head of the House.—"But when will you be back?"

His Better Half. — "When I choose!"

Head of the House—"Ah, yes! Of course! But not later. I could not permit that."

War to Peace

Make The Returning Soldier Welcome

THIS is an important hour for Canada. The nation is entering on a new era. It is passing from war to peace. Let us start this new era right. There are thousands of soldiers returning from overseas. The Government is doing all in its power to get these men back to civil life.

It is giving a *War Service Gratuity*—more than any other nation—to keep the soldier going till he gets a job.

It gives him a pension—where his usefulness is impaired by his service.

It *teaches a man a new trade* when his service unfits him for his former trade.

It *gives him free medical treatment* when illness recurs, and supplies free artificial limbs and surgical appliances.

It is bringing back to Canada at the public expense the *soldiers' dependents* now overseas.

But the Government, however willing, cannot provide the personal touch needed in this work of repatriation. That must be given by the people themselves.

The men who went from these parts to fight in Flanders deserve a real welcome home—the best we can give.

In most towns committees of citizens have already been organized to meet the soldiers and their dependents at the station, to provide hot meals, supply automobiles, afford temporary accommodation when necessary.

In addition, many other towns are organizing social gatherings to give public welcome to returned men after they have been home a few days.

After he has rested, the soldier must be provided with an opportunity for employment. In towns of 10,000 population, Public Employment Offices have been established to help soldiers, as well as war-workers, secure good jobs quickly. Where these exist, citizens should co-operate. Where they do not exist, the citizens themselves should help put the soldier in touch with employment.

* * *

The fighting job is done. It has cost many a heart-burning. But it has been well done. The least we can do is to show our appreciation in no uncertain manner.

Don't let the welcome die away with the cheers.

The Repatriation Committee

OTTAWA

May be Snow Yet

The Renfrew Mercury says that the local weather observer goes back to the winter of 1868-69 for a comparison to this winter. Snow falling in November and December, 1868, did not amount to much in the matter of volume, and there was but little during January, 1869—just as we see to-day—but in February of 1869 there came a prodigious downfall. It commenced on February 13th, continuing all day, and also on St. Valentines Day. Thereafter until late spring there were minor snowfalls, giving the country more of "the beautiful" in 1869 than it has ever since had in any one winter.

Crops garned in the fall of 1868 were very poor, and so scarce was feed that stock-owners went to their woodlots and cut branches from trees for cows to browse upon. In the lumber camps, corn imported from the states was fed to horses, on account of lack of oats. A bountiful crop was next autumn harvested; so that when snow fell in plentiful quantities in the winter of 69-70 no one was inconvenienced through lack of feed for live-stock. Winters of deep snow are usually followed by good crops in the autumn next succeeding, and if, a scarcity of snow spells a scarcity in crop yield, then we can all have a welcome for a snowfall which should fittingly mark the semi-centennial of that of 1869. Foster, the weather prophet, who through ouija board or otherwise has been forecasting weather conditions fairly accurately, says we are to get our snow in March.

Order Your Suit Now

If you are not just ready to take it we will hold it for you.

Tailors are a little slack now between seasons and can give your order the very best of attention.

You have the choice of the full range of the new stock for the coming soason at the very closest prices and a very decided saving on a large number of pieces bought many months ago at prices which would not be looked at to-day.

If you don't really need your suit now order it anyway and we'll keep it for you and save you disappointment when the rush is on and orders booked far ahead.

The Farmers and Daylight Saving

"Daylight saving" will soon be a live subject, as we have entered on the last month of winter, and spring will be upon us in a short time. Already the Welland County Board of Agriculture has entered a protest against resuming the plan this year, and more may be expected from the farming community in other parts of the country.

In the United States fully three-quarters of the country, people are opposed to "daylight saving", but there are some expressions of opinion in favor of it. Thus Western Farm Life (Denver Col.) says editorially that daylight saving is rated a distinct gain to rural life in this Western country." "Farmers in this section of the country (Helena, Mon.) were well satisfied with the daylight-saving regulation", writes the editor of the North-western Stockman and Farmer. "As a rule", thinks the Indiana Farmer's Guide (Huntingdon, Ind.,) "the farmers of Indiana had very little criticism of the plan", although it records some exceptions. Charles Lathrop Pack, President of the War Garden Commission, is quoted in the Garden Magazine (New York) as saying that "war-garden crop values were increased by millions of dollars as a result of the law". One of two farming papers even assert, as does Better Farming (Chicago) that "the farmer was the first to discover the benefits of the system". The favorable opinions, however, are more or less general, and do not allude to one practical difficulty, namely, the early morning dew. The arguments against the plan from the farmers' standpoint are summarized as follows by the Prairie Farmer of Chicago.

"(1) Much of the farm work, such as haying and harvest cannot be commenced until the dew is off in the morning. If the farmer quits work by new time he loses an entire hour's work every day.

"(2) Farming is a long-hour job in the summer, anyway, and it is almost impossible to begin an hour earlier in the morning. The hired men insist on quiting by new time. Neither they nor the farmer's family can take advantage of 'movies', band concerts, or other evening recreation unless they quit work by a new time.

"(3) The result of the daylight saving plan as it has worked out in practice, is to shorten the farmers day an hour in the busy season when every hour's work has an important effect on the result of the season's efforts".

As the necessity for greater productton foodstuffs is still urgent, it would not be judicious to interfere with farm work, but the "daylight saving" plan undoubtedly worked well last year in cities and towns, and it might be practicable to confine its operations to urban communities which, comparatively, have little social connection with the surrounding country.—Globe.

Essentials of Good Road Making

Road-makers are forerunners of civilization. It is important, therefore, that we should know where, when and how roads should be constructed. Men who possess all of these qualifications have never been very numerous in Canada. The greater proportion of our existing rural road systems have been designed and constructed by farmers who had no special training for such work. Fortunately, these conditions are rapidly changing. The counties, the provinces and even the Dominion are assuming responsibility for many of the more important highways. But no matter what authority is responsible for road construction and maintenance it is of first importance that the work should be done intelligently as to design and materials used.

The first and prime essential of any good road is surface drainage, sub-surface drainage and side drainage. When finished the road must shed water. To do this, it must be crowned from ⅛ to ¼ of an inch to the foot depending on the wearing surface, and must have an impervious or waterproof covering. There must be an impeded slope from the crown to the gutter or to the side ditch. The gutters or side ditches should have a fall of at least 5 inches per 100 feet, and if they are earthen ditches, they should have 6 inches per 100 feet, and free drainage at frequent intervals into natural creeks, channels or, in the case of the city with a sewerage system into the sewers.

To drain away the sub-surface water and prevent it softening the foundation, it is well to lay two lines of tiles.

The second essential is a good foundation, and is especially necessary for roads where the loads are concentrated on small areas.

Because macadam roads are more expensive in first cost than gravel roads, they should be built very carefully. The materials in the order of their exellence are—trap rock, tough granite, chert, tough limestone, ordinary limestone, tough sandstone.

Paving brick, concrete, crushed stone of various kinds, limestone, trap rock, granite, sandstone, chert, crushed gravel, bank gravel, sand and loam mixed with bitumens such as crude oils, coal tar and asphalts, are used to make good roads or to improve them to some extent at least.

The choice of material for any particular stretch of road will depend upon, first, the character of traffic it must sustain, second, the taxable valuation of the assessable property, third the available suitable material. Where auto and horse vehicle traffic is heavy, as it usually is around larger cities, creosoted wooden block, brick block, concrete and bituminous bound macadams are the pavements to be selected. Property values will nearly always warrant the expenses under such circumstances.

The building of good roads requires intelligent use of the construction materials. To use them carelessly or ignorantly is worse than wasting them, because the taxpayers are defrauded, the road will not wear nor give satisfaction, and the materials out of which the road was constructed are discredited.—W. J. D

Alfalfa Versus Sweet Clover

(Experimental Farms Note.)

During the last few years so much has been written in the agricultural press eulogizing sweet clover that, in many quarters, it has gained a reputation for superiority which, to say the least, is misleadingly exaggerated. A few unbiased remarks on its real value, especially in comparison with alfalfa, may therefore not be out of place.

The reputation for superiority which sweet clover has gained is to a very large degree due to the fact that it is able to do surprisingly well in naturally poor soil or worn-out land deficient in plant food, and in soil lacking in moisture to such an extent that neither red clover nor alfalfa can be grown in satisfaction.

No one who has seen sweet clover flourish in places where, to use a common expression "nothing else will grow", can deny that sweet clover might be employed as a remunerative crop on the type of land just referred to. However it should be clearly understood that though realizing the value of sweet clover as a revenue producer on poor soil, it by no means follows that sweet clover is or even equal to, other crops of its type, especially alfalfa on superior to, good land. This should be clearly emphasized because many uncritical sweet clover enthusiasts have made the error concluding, from the behaviour of sweet clover on very poor land, that is also of outstanding superiority on good land suitable for growing such crops as alfalfa. The sooner such a conception corrected, the better.

If alfalfa can be grown with reasonable success, it surely will prove superior to sweet clover in practically all respects. Alfalfa, when once established, will last for a great number of years and will continue, without re-seeding, to yield crops of high quality year after year, whereas sweet clover, being a biennial plant, will have to be re-seeded every second year unless it is given a chance to mature seeds and thus automatically re-sesd itself.

Alfalfa may be grown for pasture, hay, silage, and soiling, wheras sweet clover has a somewhat limited sphere of usefulness. Thus, sweet clover is not likely to make as good hay as alfalfa; neither can it be cured into good hay as easily as the latter. As a forage crop, its chief asset lies in its ability to furnish nutritious pasture, but even as a pasture plant it is hardly equal to alfalfa where the latter can be grown successfully. As, furthermore, sweet clover has some distinctly objectionable characteristics which are not found in alfalfa, for instance its peculiar flavour and its tendency to become a weed if not properly looked after, there is no valid reason why it should be grown in preference to alfalfa, if the latter can be grown with reasonable success. However, on land to poor too grow alfalfa, sweet clover may be used either as a forage crop or as a green manure crop for the purpose of improving the fertility of the soil.

Order Everything Early.

Spraying is something that cannot wait. It must be done at a definite time. Failure to do it then means failure to get clean fruit. Experience shows there is no one factor so important in obtaining a good crop as spraying. Therefore apply business-like forethought to it. Estimate at once how much material you will need and place your order for this not later than March 1st with definite instructions to have it shipped to you by the first week in April.

If you have to purchase a new outfit find out the make you think best and have it shipped just as soon as possible. Run no risk of its not being on hand when required. If the old outfit is to be used do not fail to overhaul and test it out in March or early April. Don't leave it until the first day of spraying. If you have to send it away to be repaired remember that many others will be doing the same and if you postpone sending until April you will in the rush of work have to wait your turn and may not get it back until after spraying has begun. This often happens.

What discourages and annoys you most when spraying? Is it not delays and poor pressure? With proper foresight and a little knowledge of the mechanism of your engine and pump you can almost entirely prevent this annoyance, discouragement and loss of time and money; so learn to do your own repairing as far as possible, pack your own pump and clean your own engine. If, however, you have no mechanical ability, get a handy neighbor to help you. Work with him yourself to learn all you can.

Be determined that this year you will do your spraying right, that you will have a good working outfit with no leakages, good long hose firmly attached, good nozzles or a good spray gun, plenty of material, a spray calendar to guide you and everything ready to start the first day the spraying season opens.

If you do your part the spray will do its part, and the result will be a clean crop. You cannot be too thoughtful about your spraying. Nothing about the orchard pays so well as intelligent spraying. You can't do it intelligently unless you are ready and follow directions carefully.—L. Caesar, B.S.A., O. A. College, Guelph.

Value of Concentrates In Ration.

A cattle feed is valuable to the extent it contains those substances which will repair body tissue, build new tissue and furnish energy to do work. The particular materials in a food which have this power are protein, the flesh-forming substance, carbohydrates and fat, the fat and energy producers and the mineral matter which has a great many functions in the body.

Any feed that carries a high percentage of protein and fat and a large amount of a digestible form of the carbohydrates is called a concentrated feed or concentrate. Thus grains, mill feeds and oil cakes are concentrates. On the other hand, a feed low in these valuable constituents and high in indigestible carbohydrates, or crude fibre, as, for instance, straw, hay, corn stalks, are called roughage or bulky feeds. Roots may also be put in this class because they contain a very high percentage of water and they are for this reason bulky.

These bulky feeds have their place in the ration, indeed in the case of full-frown animals on maintenance ration, they may form the whole of the food; but it is impossible for a young animal to make rapid growth, a cow to give a large amount of milk or a horse to work hard on such feed. The hard woody fibre of the straw and hay are difficult to digest and much of the energy that should go to production of work or increase is used up in digesting the food. Consequently when production is desired the amount of roughage feed must be reduced and the concentrates increased.

Another reason why concentrates must be used is that to get the largest production we must have the animal digest and absorb the maximum amount of the various constituents which together form a food. A cow cannot long continue to furnish a large amount of casein in milk unless it gets the material from which to form it from the food. Neither can a steer make rapid growth and fatten on a food that does not furnish a large amount of the food constituents essential for growth. These cannot be supplied in the largest and best quantities except by the use of the concentrates. The coarser feeds or roughage are necessary to give bulk to the ration, but there must be an abundance of easily-digestible materials if the best results are to be obtained and this is the place of concentrates in the ration. We want some coarse feeds, even if they are poorly digested, but we also want some concentrates to supply the materials for growth and production. Furthermore within certain limits the more of the concentrates fed the greater the production. — Prof. R. Harcourt, O. A. College, Guelph.

"Relieving Our Minds."

What passes for reasoning on most occasions is a series of vocal sounds which serve—to use a phrase at once popular and scientific—to "relieve our minds." Arguments employed in political addresses, sermons, and newspaper editorials are commonly little more than ejaculations, called forth by feelings of approval or disapproval, comfort or alarm.—James Harvey Robinson in the Atlantic.

In the Midst of Life

So frequently a man meets with death when apparently in health and looking forward to years of activity.

The income stops. His affairs disclose no resources whice will carry on the home and keep his widow and children.

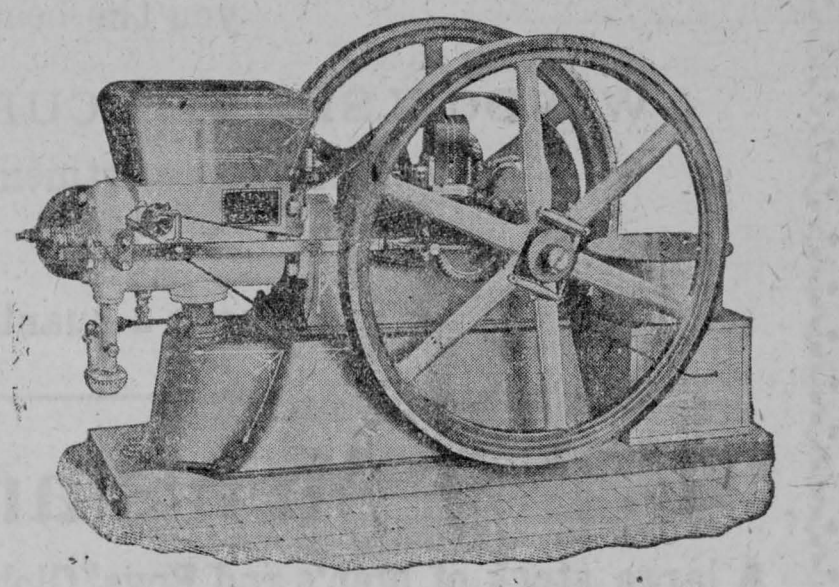

In a case like this a policy in the Sun Life Assurance Co. of Canada, will promptly meet the financial necessities.

Full information of the various plans will be gladly given by

E. B. LYNCH

General Agent Office in Fulton Block. **Chesterville**

"THE PERCIVAL"

At last a gas engine which you can rely on. It starts right, runs right and stays right, in all kinds of weather. All sizes from 1½ to 18 horse-power. Call in and see it operate before you choose your engine.

The Use of Hot-Beds and Cold Frames.

(Experimental Farms Note.)

A hot-bed is desirable wherever vegetables or flowers are grown in Canada. It is a means by which plants are grown through their earlier stages in a suitable temperature in order to shorten the time of reaching condition for use of or coming into flower. It is the early vegetables which are the most profitable and most appreciated. Furthermore, with a hot-bed it is possible to mature certain vegetables in parts of Canada where, if started in the open, they would not ripen before being killed by frost. Again with a hot bed it is possible to mature a large crop when without one the crop would be very small. Certain vegetables also, even if not subjected to actual frost, will not grow if the soil and air are cold, hence must be started in warm soil and warm air such as is afforded by a hot-bed, and the plants grown there are not set out in the open until the warm weather.

Such crops as radish, lettuce, spinach, carrots, and other vegetables which will reach marketable size in a relatively short season and are easily handled while the weather is still cool in early spring, reach the stage when they are ready for use much sooner when kept in the hot-bed or cold frame than if one had to wait until the seed were planted in the open and the plants developed there. There is usually greater danger from keeping the hot-bed too hot for theseparticular vegetables than from its being to cool. Cauliflower also can be grown to maturity in hot-beds, and in places where it is difficult owing to summer frosts or cool weather, to grow cucumbers and melons, a few plants in a hot-bed will provide a fair supply for the family.

In making a hot-bed the conservation of the heat in it is one of the chief considerations, and to assist in this the hot-bed should be in a protected place, preferably on the south side of a building, wall or close board fence where the cold winds will be broken and all the sunshine possible be obtained. The manure used should be hot when it is put in, and it should be kept hot by thoroughly banking the outside of the frame with manure to prevent the cold getting in and the heat getting out. It is easier to conserve heat in a bed that is low than one that is built high up.

Cold frames are much like hot-beds in outward appearance, but no manute is put inside as cold frames are used later in the spring than the hot-beds and less heat is needed, there being sufficient from the sun shining through glass, and the glass and frame usually afford sufficient protection from light frosts should there be such.

Details in regards to making hot-beds will be found in a pamphlet which can be obtained free on application to the Publications Branch, Department of Agriculture, Ottawa.

A Touch of Temperament

By VINCENT G. PERRY

(Copyright, 1918, by the McClure Newspaper Syndicate.)

Ronald Adair, better known as Richard Stevens, dramatic actor, put down his hand mirror with an exclamation of relief. He had his make-up on to satisfy his director this time, he was sure. It was the first time he had made up his face successfully for the camera, for it was so different from the make-up for the footlights that it was like learning something entirely new. If everything about moving picture acting was to be as hard as the make-up he was sorry he had forsaken the stage for the silent drama, but then the tempting salary that had been used as an inducement for him to sign a contract to star in feature photoplays was worth a little inconvenience.

"I'm all ready," he announced, as his director appeared at his dressing-room doorway. "Now to do or die."

"I'm afraid you'll have to die," the director smiled wistfully. "The star we have selected to play opposite you has taken a fit of temperament and absolutely refuses to go in a scene with you. She has never seen you, but has taken a dislike to you from a picture she saw of you in a Shylock costume. She went to her home some place out of the city last night. It has tied things up for goodness knows how long."

"She must be crazy!" Adair exclaimed.

"No, she's far from it. She's been overtaxed, though, lately, and I wouldn't be surprised if this is the first symptom of a nervous breakdown."

"She couldn't be a fitting type for the part of the girl in that 'script you have for me or she wouldn't behave like this."

"You don't know Geraldine Lewis or you wouldn't say that," the director said grimly. "She's going to be one of the big stars soon." Geraldine was evidently a favorite, so Ronald refrained from expressing his opinion of her.

Charley Dixon, the director, and Ronald, spent the rest of the day looking over the other available stars and extra girls, but couldn't find one they could agree on as being suitable for the part. There was nothing for it, apparently, but to wait until Geraldine Lewis came to her senses. The fear of losing a renewal of her contract would have some effect, likely.

The prospect of a holiday was not an unpleasant one, especially as there was some business in the country that Ronald had to attend to. His father had left him some property in the village of Windslide and it had been in the hands of the village lawyer so long that it needed looking after. If there was any way of turning it into cash Ronald was going to find it, and he motored to the village with this object in view.

After registering at the hotel, he lost no time in seeking the lawyer. He expected to find a notice on that gentleman's door announcing that he had gone on a fishing expedition, but this village lawyer was different from the dramatized version of village lawyers, and was in his office and was moreover engaged with a client. As Ronald waited in the little outer office he could hear a woman's melodious voice, raised in argument. The door opened and the lawyer, Mr. William Scruggins, came out, followed by one of the prettiest girls Ronald had ever had the pleasure of seeing. Scruggins, apparently, was escorting her to the door, but she had no intentions of going before she finished her argument to her satisfaction.

"My mother paid that mortgage before she died, and with money I sent her, I tell you again, Mr. Scruggins," she said. "I won't pay it again if I have to bring the biggest lawyer from New York here, and I can afford to do it, I'll have you to understand."

"I don't care whom you bring," Scruggins chirped in his cracked old voice. "The mortgage isn't paid and no more is the interest. I'll foreclose for my client, Mr. Adair, if it isn't paid within thirty days."

Ronald stepped forward at the mention of his name. "I am Mr. Adair. Does this young lady's claim concern me?"

Scruggins stepped back in surprise and the young lady seized the opportunity of putting her case before Ronald. Her name was Hilda Moore. She had been raised in Windslide and had gone to the city and made a success of the profession she had undertaken. She had sent her mother money to pay off the mortgage on her old home and had seen the receipt signed by Scruggins. But somehow the receipt had been lost after her mother's death and now when she had returned to spend a vacation at her old home she was threatened with being turned out.

Miss Moore had made sure Scruggins could not get a word in edgeways and before he could get in his side of the story, Ronald ended it by saying: "I think there has been some mistake, so I will sign the receipt for you myself, Miss Moore.'

"Oh, thank you," she beamed. "It isn't just because of the money, for luckily I have plenty, but I don't want to be beaten by that man. Men have been causing me enough trouble lately!" Ronald did not hide his smile.

After Ronald had satisfactorily established his identity and the proper papers had been made out, he offered to drive Miss Moore home in his car. She accepted his offer. As they skimmed over the country roads he had an opportunity to survey the girl beside him. She was almost the prettiest girl he had ever seen. Her conversation was not artificial and he found her a most interesting person—able to talk on the subjects he cared for most, and never once speaking of herself.

The people of the studio had his address and would wire him when Geraldine Lewis came back. He called at the telegraph office every morning for the expected message, but it did not come. Miss Moore and he became very friendly and soon she accompanied him in his car on most of his drives. The days passed and still there was no word from the studio. Every day he called to take Miss Moore out in his car, and before long they reached the stage where he called her Hilda. The days grew into weeks.

"Why do you always call at the telegraph office?" Hilda asked one day, after he had announced his intention of heading the car that way.

"I am expecting a wire from New York," he answered.

"New York!" she exclaimed, in surprise. "Are you from New York?"

"Yes. Is there anything strange about that?"

"No, but I thought it strange that you had never mentioned it before. I have been under the impression that your home was here."

"I was never here until the day I met you."

"Will the wire call you back?" she asked.

"Yes."

"Why hasn't it come before?"

"Because of a woman."

"Your wife?" she asked in alarm.

"No, it is just a woman who has caused a big change in my plans. It is because of her I found time to come here."

"That's strange! It's because of a man I am here. A man I have never met, either, but he is a hateful man."

"Tell me about him," he invited.

"It wouldn't interest you," she said, trying to make him think there was a mystery.

He did not speak until he halted his car in front of the telegraph office, and then it was only a few curt words. He entered the office and returned in a few seconds with an envelope in his hands. A lump rose in her throat as she noticed it and realized that their companionship was to be broken.

"Does it say you are to go?" she inquired eagerly.

He had meant to act offended, but her tone won him over. "I'll read it," he said, as he pulled it open. He read it aloud: "No word from Geraldine. Have secured star to take part. Come back at once.—Dixon."

"Oh," she cried, "is that from Charley Dixon?" He did not answer, but she knew it was. "I am Geraldine Lewis, and I ran away sooner than play a love scene with you. I was told you were old and homely."

"And here we've been playing love scenes for a couple of weeks," he laughed.

"Yes," she blushed, "but let's drive some place else. We are standing up in the car and must look very foolish."

"Wait until I wire Dixon," Ronald said, as he jumped from the car.

The wire that Dixon received made him think somebody had gone crazy, for it read: "Fire that star. I have vowed never to make love to another woman but Geraldine Lewis. Congratulate us," and it was signed "Stevens."

Dixon took some time to figure out what it all meant, but it dawned upon him. "He's married her!" he exclaimed, when they arrived at the studio the next day.

SEES PAREGORIC AS MENACE

Writer Asserts That Undue Indulgence In Mixture Results in a Form of Intoxication.

The fast young man at our boarding house has been showing unaccountable signs of alcoholic exhilaration. Two or three times lately, in the deadly dull calm of the dinner session, he has come in with a flushed face and glassy eyes and taken charge of the conversation. Last evening the schoolteacher was telling about the splendid progress of the welfare work, when the F. Y. M. broke in with a risque story and laughed boisterously at his own remarks. Some of us, in whom the spark of life is still latent, took the F. Y. M. aside, with the intention of ascertaining the source of his levity, and what I learned I am slipping to my friends for their information.

It's paregoric—absolutely.

What do you think of a sport who will step out with a bottle of paregoric and make an evening of it? Two nights ago he came in with a dent in his derby and his cane split, bringing us all back with a jerk to the old wet days.

Here is a new danger to our sober and happy manhood. I write this to warn mother that she must keep her eye on the paregoric bottle. Paregoric, I am told, is well endowed with alcohol. While the baby may need it, father is at no time entitled to its benefits, if any. A paregoric spree is one of the most irresponsible adventures in the world. If the home bottle is unprotected, I fear that father is likely to show up some evening boisterously and unreasonably happy.—G. M. F., in Seattle Post-Intelligencer.

Planning His Career.

Seven-year-old Robert has a great desire to follow in his father's footsteps. One night his mother overheard him making this prayer: "Please, God, make me a good boy, then a good lawyer, and then just land me on the supreme bench. Amen."—Boston Transcript.
